Businesses along the Caltrain corridor account for:

- 14% of California’s Gross Domestic Product
- 20% of the State’s tax revenue
- 1.6 million jobs along the corridor
- 54% of the patents in CA and 13% nationwide

**The Challenge**

The Caltrain Corridor is home to some of the world’s most innovative and fastest-growing companies that contribute economic strength to the national economy. Unfortunately, the region is also home to some of the country’s worst traffic congestion.

- Silicon Valley ranks 3rd globally in GDP per capita
- $722 billion in gross regional product annually
- Traffic congestion is getting worse and the average delay per person reached 67 hours per year.
- $5.4 billion in economic productivity lost due to congestion.

**Electrification Can Solve It**

By providing a reliable daily commute alternative, Caltrain has become one of the country’s fastest growing commuter rail systems with over 65,000 daily riders. The Peninsula Corridor Electrification Project (PCEP) is critical to helping curb traffic congestion, accommodating Caltrain’s growing ridership, increasing capacity and creating jobs across the U.S.
