

Los Gatos Creek Bridge Replacement Project

Starting February 13, 2017, Caltrain will begin construction to replace the Los Gatos Creek Bridge in San Jose. The current bridge was built in 1935, and in order to maintain safe rail operations and meet current seismic safety standards, the bridge must be replaced. The project will include installation of a tail track south of the San Jose Diridon station which will facilitate the construction of the main track bridges, provide improved operations at the station and minimize system-wide delays.

Construction timeline:

Feb 2017 – June 2017

Staging, fencing, temporary access roads, signal work, tail track abutment work, and retaining wall work

June 2017 – Aug 2017

Tail track bridge construction, bridge foundation and abutment work, pre-cast superstructure installation

Aug 2017 – Oct 2017

Existing bridge demolition, new Main Track 1 & 2 bridge construction and in-creek site mitigation

Oct 2017 – Early 2018

Track and signal work, out-of-creek site mitigation, and site clean-up

In order to maintain regular train service, some activities will be conducted during nights and weekends, outside of normal train service hours. Neighbors may experience construction noise and light during these times. We apologize for any inconvenience this may cause.

Caltrain offers a weekly notice for those interested in the latest construction activities. For more information on the project, and to sign-up for the weekly construction notice, visit www.caltrain.com/losgatos. For questions about the project, please call the Caltrain Construction Hotline at 650.508.7726 or email lgcbridge@caltrain.com.
