

Advanced Signal System Project

Dear Caltrain Neighbor:

September 2015

Caltrain will be performing work in your area as part of the Advanced Signal System Project to upgrade the safety, performance, and operating efficiency of the Peninsula's commuter rail system. To implement the Advanced Signal System, there are several installation elements (utility location, boring, conduit, and fiber placement) that will occur next to a segment of Laurel St., San Carlos Ave., and El Camino Real. The work is scheduled to take place Sept. 21 to Oct. 9, Monday – Friday from 9am to 3pm. A portion of the sidewalk and a portion of the parking spaces will be periodically impacted while the work is taking place. Neighbors may experience some installation noise during this time and we apologize for any inconvenience this may cause and will work as quietly, and quickly as possible.

The Advanced Signal System, also called Communications Based Overlay Signal System (CBOSS) Positive Train Control (PTC), will equip the corridor with federally-mandated safety technology and increase system capacity to help accommodate future ridership demand. The Project will monitor and, if necessary, control train movement in the event of human error. This will increase safety by:

- Eliminating the risk of train-to-train collisions.
- Reducing risk of potential derailments by enforcing speed limits.
- Providing additional safety for railroad workers on the tracks.
- Improving grade crossing performance to reduce gate downtime and improve local traffic circulation.
