

Los Gatos Creek Bridge Replacement Project

Upcoming Project Night Work

Dear Caltrain Neighbor:

As part of the Los Gatos Creek Bridge Project, there is weekday night work expected to begin on Wednesday, April 12. Crews will be installing sheet and cast-in-drilled-hole piles within the Caltrain right-of-way. To limit the impact to railroad operations, these activities must be conducted at night when there is limited or no train service.

Weekday night work is expected to continue until May 12. Additional night work will be required throughout the project.

During the night work, neighbors will hear additional noises from heavy machinery and from equipment backup alarms. In addition, generators will be used for night time activities to power portable light towers. Caltrain will implement noise mitigation measures for residents directly adjacent to the project site. We apologize for any inconvenience these activities may cause.

The current bridge was built in 1935, and in order to maintain safe rail operations and meet current seismic safety standards, the bridge must be replaced. The project will include installation of a tail track south of the San Jose Diridon station which will facilitate the construction of the main track bridges, provide improved operations at the station and minimize system-wide delays.

Caltrain offers a weekly notice for those interested in the latest construction activities. For more information on the project, and to sign-up for the weekly construction notice, visit www.caltrain.com/losgatos. For questions about the project, please call the Caltrain Construction Hotline at 650.508.7726 or email lgcbridge@caltrain.com.
