1.0 Summary

The Peninsula Corridor Joint Powers Board (JPB) which operates the San Francisco Bay Area’s Caltrain passenger rail service proposes to replace the two-track railroad bridge that crosses Los Gatos Creek, in the City of San Jose, Santa Clara County, California. The Proposed Action is needed to address the structural deficiencies and safety issues of the Caltrain Los Gatos Creek railroad bridge to be consistent with the standards of safety and reliability required for public transit, to ensure that the bridge will continue to safely carry commuter rail service well into the future, and to improve operations at nearby San Jose Diridon Station and along the Caltrain rail line.

This report documents the evaluation of potential hazardous materials issues related to the Los Gatos Creek Bridge Replacement/South Terminal Phase III Project to inform the environmental review processes under California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA). The efforts documented in this report include a review of previous environmental site investigations of the project (which have included soil sampling and testing of bridge materials for lead-based paint), an updated environmental database search to identify potential sources of contamination in the vicinity of the project, an updated site visit, and identification of standard hazardous materials management commitments appropriate to minimize potential impacts.

This report concludes that in the long-term, the proposed project would have no impact on hazardous materials exposure. Temporarily during construction, there is the potential for encountering contaminated soil, as well as lead-based paints on the existing bridge. These types of materials are routinely addressed in JPB construction projects through standard best management practices in accordance with federal and state regulations. With incorporation of these best management practices, the impact of the project on hazardous materials would be less than significant under CEQA.

2.0 Introduction

The Peninsula Corridor Joint Powers Board (JPB) proposes to replace the two-track railroad bridge that crosses Los Gatos Creek, in the City of San Jose, Santa Clara County, California (see Figure 1).

The purpose of this report is to document the evaluation of potential hazardous materials issues related to the project, including review of existing potential sources of contaminated materials, assessment of impacts related to contaminated materials during construction of the project, and identification of standard hazardous materials management commitments appropriate to minimize potential for impacts.

2.1 Project Location

The Peninsula Corridor Joint Powers Board (JPB) which operates the San Francisco Bay Area’s Caltrain passenger rail service proposes to replace the two-track railroad bridge that crosses Los Gatos Creek, in the City of San Jose, Santa Clara County,
California. As shown in Figure 1, the proposed project area, generally bounded by Caltrain’s San Jose Diridon Station to the north, Interstate 280 (I-280) to the south, Sunol Street to the west, and Royal Avenue on the east, occupies the width of the right-of-way (ROW) owned by JPB and extends a distance of approximately 0.4 mile.

Figure 1: Project Location
Two tracks, Main Tracks 1 and 2 (MT-1 and MT-2), run parallel through the entire project area. MT-1 is owned by the Union Pacific Railroad (UPRR) for freight service and MT-2 is owned by the JPB for Caltrain service. Both tracks connect with San Jose Diridon Station Tracks 1 through 9 immediately south of the Park Avenue Overpass. From the Park Avenue Overpass, the double-track alignment continues southward for approximately 800 feet before passing beneath the West San Carlos Avenue vehicular bridge. Immediately south of the West San Carlos Avenue vehicular bridge, the two tracks turn in a southeasterly direction and extend approximately 200 feet across the Los Gatos Creek railroad bridge. The JPB owns and maintains the Los Gatos Creek railroad bridge. Both tracks continue southeast for approximately 500 feet before crossing Auzerais Avenue at grade. South of Auzerais Avenue, the double-track alignment continues for approximately 400 feet before reaching the project area's southern boundary immediately north of the I-280 overpass. Beyond I-280, the alignment continues south to Caltrain’s Gilroy Station.

2.2 Purpose and Need of the Proposed Project

The proposed project is needed to address the structural deficiencies and safety issues of the Caltrain Los Gatos Creek railroad bridge to be consistent with the standards of safety and reliability required for public transit, to ensure that the bridge will continue to safely carry commuter rail service well into the future, and to improve operations at nearby San Jose Diridon Station and along the Caltrain rail line. These project needs are discussed below.

2.2.1 Existing Safety Concerns

The existing Los Gatos Creek Bridge measures 174 feet in length and 35 feet in width and is approximately 100 years old. The bridge is made up of two bridge types, steel girders on concrete piers and timber trestle on wooden pile bents (piers). There are a combined nine piers and bents in the creek including the abutments. Second-hand steel girders (now much older than 100 years) were used during the original construction of the bridge and contribute an additional risk for the structural failure of the bridge.

The existing bridge was inspected in 2005 and 2012 as part of the on-going JPB Bridge Program and many elements were found to not meet current load requirements. Although the steel spans are in good condition, the southerly timber trestle approach spans have been damaged by fire and have experienced moderate section loss. The bridge was evaluated per current industry requirements for the inspected condition and was found to rate below the current and projected service loads as well as the JPB design criteria for live load capacity (Cooper E80) for new bridges. The bridge was also analyzed for seismic capacity and found to be vulnerable during significant magnitude earthquakes.

Figure 2 shows two photographs from the most recent bridge inspection in 2012. The photographs highlight the deteriorating conditions of the bridge from the charring and rotting of the South bridge cap.
The bridge has reached and exceeded the 75-year useful life for which it was designed. Due to its increasing age, the compromised condition of the southerly trestle approach spans, failure of some bridge elements to meet current and projected service loads, and vulnerability in the event of a significant earthquake, the Los Gatos Creek Bridge needs to be replaced with a new structure.

2.2.2 Need for a Tail Track

Caltrain currently operates 46 northbound and 46 southbound trains per weekday (for a total of 92 trains per day). Thirty-four of these trains originate and terminate at Tamien Station, located approximately 1.3 miles south of the Los Gatos Creek Bridge. All Caltrain service to Tamien Station and further south utilizes only one of the two tracks through the project area, MT-2.

The San Jose Diridon Station has recently completed an expansion program that included four new platform faces with extended platform lengths. The expansion allows for more trains to serve the San Jose Diridon Station and more passengers to access the Caltrain trains.

In addition to Caltrain, Altamont Corridor Express (ACE), Capitol Corridor, and Amtrak also serve San Jose Diridon Station. ACE currently operates three weekday trains to San Jose during the morning peak period and three weekday trains departing San Jose in the evening peak period. Capitol Corridor operates seven weekday trains originating and departing from San Jose Diridon Station (for a total of 14 trains per day). Amtrak Long Distance currently operates the Coast Starlight which serves San Jose Diridon Station with two trains per day (one northbound and one southbound). While ACE and Capitol Corridor trains terminate passenger service at San Jose Diridon Station, one Capitol Corridor train and three ACE trains use Tamien Station and the Tamien yard for layovers. These trains utilize MT-1 through the project area from San Jose Diridon Station to Tamien Station. Since MT-1 is owned by UPRR, freight service has priority use for the track.

Currently, the two tracks are sufficient to provide service through this rail corridor. However, several trains a day pass through the project area just to access the layover area at Tamien Station. There is no siding along this stretch of the Caltrain corridor;
therefore non-revenue, non-passenger trains are traveling the full length between San Jose Diridon and Tamien Stations just to turn around. Moreover, other trains that terminate at San Jose Diridon Station have limited rail yard space to efficiently maneuver and change directions. A tail track extending south from San Jose Diridon Station would improve operations at San Jose Diridon Station and would be able to accommodate the trains otherwise laying over and changing direction at Tamien Station.

In addition, if there is a delay in one of the rail services, or if a train breaks down, the lack of any siding along this alignment creates a delay along the entire route. The tail track in the project area would also serve as a temporary, emergency layover area for a passenger train.

2.2.3 Purpose of the Proposed Project

The purpose of the proposed project is to replace the structurally deficient Los Gatos Creek railroad bridge and provide a tail track south of San Jose Diridon Station in order to:

- Ensure safe rail travel for Caltrain passengers and other users of the Los Gatos Creek railroad bridge;
- Improve operations at the San Jose Diridon Station and provide an efficient way for trains to change directions; and,
- Minimize system-wide delays by providing a temporary, emergency layover area.

Without the proposed project, the replacement of the Los Gatos Creek railroad bridge would not be completed and the bridge would present an increasing safety hazard to all users. In addition, operations at nearby San Jose Diridon Station would not be improved and system-wide delays would be likely to occur.

2.3 Project Description

The following sections describe design elements and construction phasing plan for the proposed project. The proposed project consists of replacing the existing Los Gatos Creek Bridge while maintaining rail services across the bridge. The new bridge will consist of a two-track alignment over Los Gatos Creek with the addition of a tail track extending south from San Jose Diridon Station. The addition of the tail track comprises Phase III of the South Terminal Project, which includes a variety of improvements at and near the San Jose Diridon Station to improve Caltrain operations along this corridor.

2.4 Project Elements

Figure 3 illustrates the elements of the proposed project. The existing bridge consists of a north abutment, three piers in the creek area, and a series of timber bent segments on the south end; the new bridge would have a north abutment, two piers within the creek area, and a south abutment. The two tracks that currently utilize this bridge are MT1 (owned by UPRR and on the east side of the bridge) and MT2 (owned by the JPB). The new bridge would be wider than the existing bridge, with the expansion occurring on the west side to accommodate the tail track to improve operations at the San Jose Diridon Station just to the north of the project area. The tail track and several temporary tracks,
known as shoofly tracks, will be used to route trains around the area under construction in order to maintain active rail service across the bridge at all times.

The ultimate alignments of MT1 and MT2 over the new bridge would be generally unaltered from their current configuration.

The limits of the tail track are from approximately 300 feet north of West San Carlos Street 300 feet south of Auzerais Avenue, where it ties back into MT2 before the alignment crosses over I-280, the southern limit of the project area. Due to spacing requirements between adjacent tracks, minor right-of-way acquisitions from two parcels on the west side of the tracks would be required. Rock slope and scour protection (riprap) would be installed on the north bank of the creek.

Caltrain operates, and is required to operate, rail service on two tracks across the Los Gatos Creek Bridge at all times. In order to maintain continuous rail operations on both tracks, the construction of the replacement span must take place in three sections. Before work can start on any section, the channel flow must be diverted via a pipe and out of the way of the work. Only after the channel is diverted can the first section be constructed. Piles, piers, superstructure, and finally the track itself will be constructed only after the channel diversion is complete. However, during the winter months, when no work is taking place in the channel, the channel shall be returned to its original condition. Therefore, in order to construct the new piers and bridge superstructure, Los Gatos Creek would be realigned via a diversion channel or pipe three times during construction.

Proposed staging and laydown areas have been identified on the west side of the existing bridge. A portion of the staging area lies on private property and temporary construction easements would be needed for this area.

2.5 Construction Staging

Replacement of the Los Gatos Creek railroad bridge is estimated to last approximately 24 months starting in 2015. Work within the creek will be limited to only the time between June 15th and October 15th in order to accommodate sensitive environmental resources. As a result of the environmentally constrained window for work within the creek, the in-creek construction elements will be completed in two consecutive summer seasons. The construction stages and major work elements are outlined in Table 1.
Figure 3: Los Gatos Creek Bridge Replacement / South Terminal Phase III Project Site Plan

<tr>
<td></td>
<td></td>
<td>o Install precast abutments and southwest wingwall caps and remove tie-backs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Adjust shoring and remove access ramps</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Reset channel flow</td>
</tr>
<tr>
<td>3 - Winter out-of-creek construction</td>
<td>October 15 to June 15</td>
<td>o Construct tail track bridge superstructure</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Install temporary tail track over new track bridge</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Install new fiber optic and other electrical associated with new bridge</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Cut in tail track at ends on train free weekends and begin operations</td>
</tr>
<tr>
<td>4 - Season 2 in-creek construction</td>
<td>June 16 to October 14</td>
<td>o Remove tie-backs under MT2 track and add tie-backs and shoring for MT1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Grade temporary access roads into creek area</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Construct temporary creek diversion</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Cut timber deck and remove existing MT2 section of bridge superstructure, piers, and abutments</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Construct piers, abutments, and superstructure for new MT2 bridge</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Construct MT1 shoofly on approaches and across MT2 bridge</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Grade temporary access roads into creek area</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Remove exiting MT1 section of bridge superstructure, piers, and abutments</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Construct piers and abutments for new MT1 bridge</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Grade new creek channel, regrade upstream channel embankment, and place riprap</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Remove access roads from creek area and regrade downstream channel embankments</td>
</tr>
<tr>
<td>5 - Finish out-of-creek construction</td>
<td>October 15 to project completion</td>
<td>o Construct superstructure for new MT1 bridge</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Construct new MT1 track on new bridge</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Remove remaining access road segments</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Remove temporary MT1 shoofly and return service to MT1 mainline track</td>
</tr>
<tr>
<td></td>
<td></td>
<td>o Remove temporary tail track connection and return service to MT2 mainline track</td>
</tr>
</tbody>
</table>

### 3.0 Review of Previous Hazardous Materials Studies

A Limited Phase I Environmental Site Assessment (ESA) Report dated July 2, 2008 was prepared for the Los Gatos Creek Bridge Site by Environmental Resources Management (ERM). Review of historical documents by ERM as part of the 2008 ESA indicated that the area surrounding the project site appeared to be occupied by commercial and residential buildings in all historical aerial photographs reviewed. The existing railroad
bridge was constructed on the site in 1935.\textsuperscript{1} No nearby properties were identified with the potential to have affected the project site with hazardous materials. ERM identified no environmental concerns during a site visit in 2008. ERM did not identify recognized environmental conditions (RECs) associated with the project site, but concluded that based on the historic and present use of the bridge for rail operations, the potential exists that chemicals (such as petroleum hydrocarbons and metals) may have impacted the project site. ERM also identified the possibility that lead-based paint was used in the construction of the Los Gatos Creek Bridge based on its age.

Based on the findings of the Limited Phase I Assessment, ERM collected soil samples for laboratory analysis to determine if soil contamination was present at the Site. ERM also collected paint samples from the bridge for lead analysis. The results of both soil sampling programs were provided in a letter report dated August 25, 2008. Based on the findings of this sampling and analysis the following conclusions were made:

- Relatively insignificant impacts to soil were detected in the limited sampling conducted. Total petroleum hydrocarbons (TPH) as motor oil was the only contaminant consistently detected above the San Francisco Regional Water Quality Board Environmental Screening Levels. Reuse of any soil generated during the bridge reconstruction would be governed by the \textit{Caltrain North and South CTX Soil Management Plan} (SMP) prepared by ERM in 2003. The SMP allows reuse of soil in the railroad ROW with up to 1,000 milligrams per kilogram of TPH as motor oil. ERM recommended that soil in the affected areas (near sample points LG-7 and LG-8 immediately west of the current Orchard Supply Hardware property) be stockpiled and sampled for TPH prior to reuse in the project area. Any soils that would require disposal off-site would require chemical profiling prior to disposal. Additional identified affected soils encountered during construction may require further characterization and determination of soil handling procedures.

- Lead-based and lead-containing paint was identified on the bridge structure. ERM recommended that any contractor performing demolition activities on the bridge structure comply with the California Division of Occupational Safety and Health (Cal/OSHA) Lead in Construction Standard for protection of workers, and properly control and contain paint dust and debris resulting from the demolition operation. The resulting paint chips, dust and debris should be properly contained and disposed of.

### 4.0 Review of Environmental Databases

The 2008 Limited Phase I Assessment included a database search for regulatory agency records regarding the project site and nearby properties. The 2008 ESA did not identify any properties that are considered RECs and at which releases or potential releases of oil or hazardous materials have occurred that have the potential to affect soil or groundwater quality at the project site. Although the 2008 report indicated that there are regulated properties in the vicinity of the project site, these nearby sites are not expected to have adversely impacted the project site because either (1) the case has

\textsuperscript{1} See the Los Gatos Creek Bridge Replacement/South Terminal Phase III Historic Resources Inventory and Evaluation Report (JRP, 2013).
been closed, (2) the sites are located downgradient or crossgradient from the project site, and/or (3) the sites are sufficiently distant from the project site.

In order to update the 2008 findings, a search of federal and state databases was conducted by Environmental Data Resources, Inc. (EDR) in March 2013 (Appendix A). The various databases discussed further below in this section were reviewed for information regarding documented and/or suspected releases of regulated hazardous substances and/or petroleum products on or near the project site.

The following federal databases (publication date in parentheses), identified by ASTM Standard E1527, were reviewed. The standard search radii specified in the ASTM were used for all databases.

- Resource Conservation and Recovery Act (RCRA) TSD and GEN List (02/12/2013)
- Corrective Action Report (RCRA CORRACTS) (02/12/2013)
- Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List (02/04/2013)
- CERCLIS No Further Remedial Action Planned (NFRAP) (02/05/2013)
- National Priority List (NPL) (02/01/2013)
- Federal Engineering and Institutional Controls Registries (12/19/2012)
- Emergency Response Notification System (ERNS) List (12/31/2012)

The following state databases were reviewed:

- California Registered USTs (12/17/2012)
- California Spills, Leaks, Investigations and Cleanup Database (12/17/2012)
- California State Calsites Database (SHWS) (08/08/2005); no longer updated, replaced by Envirostor database (12/05/12)
- Solid Waste Facilities/Landfill Sites (SWF/LF) (12/18/2012)
- Leaking Underground Storage Tank (LUST) List (12/17/2012)
- Voluntary Cleanup Sites (VCP) (12/05/2012)
- Engineering Controls/Institutional Controls Sites (03/16/2012)
- California Brownfields (12/10/2012)

In addition to information from the EDR report, an updated review of the following government databases was also conducted in March 2013:

- EnviroStor (California Department of Toxic Substances Control (DTSC), http://www.envirostor.dtsc.ca.gov/public)

  This EnviroStor web page allows one to search for properties regulated by DTSC where extensive investigation and/or cleanup actions are planned or have been completed at permitted facilities and cleanup sites.

- GeoTracker (State Water Resources Control Board, http://geotracker.waterboards.ca.gov/).

  Geotracker is a database and geographic information system that provides online access to environmental data. It tracks regulatory data about leaking underground storage tanks (USTs), Department of Defense, Spills-Leaks-
Investigations-Cleanups (SLIC) and Landfill sites. The database also contains information about public drinking water wells. Geotracker uses commercially available software to allow users to access data over the Internet.

The unmappable (also referred to as “non-geocoded”) listings within the database report were also reviewed, cross-referencing available address information and facility names. Unmappable sites are listings that cannot be plotted with confidence, but are located within the general area of the Subject Property based on the partial street address, city name, or zip code. In general, a listing cannot be mapped due to inaccurate or incomplete address information in the database supplied by the corresponding regulatory agency.

The criteria used to evaluate the potential for impact to the project site included:

- Distance from the project site;
- Expected depth and direction of groundwater and surface water (including stormwater) flow;
- The presence of documented releases of oil or hazardous materials at the identified sites; and
- The potential for impacts to the project site given past or present site activities.

The identification of a site as potentially upgradient or downgradient is based on the regional topography with a general hydraulic gradient in the area of the project site expected to be northeasterly, toward the Guadalupe River and San Francisco Bay.

Sections 4.1 through 4.5 provide a summary of sites from the database reviews that have the potential to affect the project site based on their distance and location with respect to the project site and/or the nature of hazardous materials releases on the sites.

## 4.1 RCRAInfo

Inclusion on the EPA’s RCRA information system is not necessarily indicative of contamination; rather, it indicates the presence of potential sources of contamination. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Conditionally exempt small quantity generators (SQGs) generate less than 100 kilograms (kg) of hazardous waste, or less than one kg of acutely hazardous waste per month. Small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kg of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. Treatment, Storage or Disposal Facilities (TSDFs) treat, store, or dispose of the waste.

The following RCRA generators were identified within one-half mile and upgradient from the project site in the environmental database report:

<table>
<thead>
<tr>
<th>Site</th>
<th>Location</th>
<th>Distance/Direction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Orchard Supply Hardware</td>
<td>720 W San Carlos St.</td>
<td>adjacent to southeast</td>
</tr>
<tr>
<td>Tony’s Auto Repair</td>
<td>696 Auzerais Ave.</td>
<td>0.15 mile SE</td>
</tr>
<tr>
<td>Apex Marble, Inc.</td>
<td>806 West Home St.</td>
<td>0.29 mile SSW</td>
</tr>
</tbody>
</table>
All of these RCRA sites are SQGs.

### 4.2 EnviroStor

The State of California maintains an inventory of the known contaminated sites (SHWS) in California, listed on the EnviroStor. These sites may or may not already be listed on the federal CERCLIS List. According to the EDR Report (Appendix A), there are two SHWS located within one-mile of the project site:

<table>
<thead>
<tr>
<th>Site</th>
<th>Location</th>
<th>Distance/Direction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reed &amp; Graham, Inc.</td>
<td>609 Sunol St.</td>
<td>0.44 mile SSW</td>
</tr>
<tr>
<td>Former West Coast Rebar</td>
<td>1131 Auzerais Ave.</td>
<td>0.49 mile WSW</td>
</tr>
</tbody>
</table>

The Reed & Graham site is listed as “inactive – needs evaluation” in the EDR report. The former West Coast Rebar site is labeled as “Certified O&M, land use restrictions only.” Based on the distance of these sites from the project site, releases of hazardous materials on these properties are not expected to affect the project site.

### 4.3 Leaking Storage Tanks

The LUST Incident Reports contain an inventory of reported leaking UST incidents. The EDR report indicated there are 112 LUST sites identified within approximately 0.75 mile of the project site, 40 of which are at equal or higher elevation. The closest of these listed LUST sites is the adjacent Orchard Supply Hardware to the southeast. The EDR report indicates the case for the leaking tank incident at the Orchard Supply Hardware store is now closed.

### 4.4 Spills-Leaks-Investigations-Cleanups

The SLIC List, prepared by the California Regional Water Quality Control Board indicated that there are 16 SLIC sites within approximately 0.75 mile of the project site, 3 of which are at equal or higher elevation. The EDR report indicates that the spill cases for these 3 incidents are now closed.

### 4.5 Voluntary Cleanup Sites

The former West Coast Rebar site at 1131 Auzerais Ave, about one-half mile west-southwest of the project site appears on the VCP list. As previously stated, this property is identified in the EDR report as “Certified O&M, land use restrictions only,” and based on its status and distance from the project site, releases of hazardous materials on this properties are not expected to affect the project site.

### 5.0 Site Reconnaissance

An environmental scientist conducted an updated site inspection along accessible portions of the project site on March 23, 2013. Photographs taken during the site reconnaissance are provided in Appendix B. The site reconnaissance recorded surficial and visible conditions only. Such a review cannot be expected to reveal all hazardous materials or conditions that might be present on-site; the possibility exists that some hazardous materials or conditions might exist and not be detected.
The weather was sunny with a temperature of about 60° Fahrenheit (F) at the time of the site reconnaissance. Accessible portions of the project site were viewed by walking along the right-of-way, Los Gatos Creek, and public streets transecting the project corridor. The Los Gatos Creek Bridge itself was not directly accessed due to its location entirely within the active right-of-way; however, it could be readily viewed from adjacent properties.

The project site consists of the Los Gatos Creek Bridge and a corridor of railroad right-of-way adjacent to residential and commercial properties near downtown San Jose, including a paint store (Kelly Moore Paints), an auto repair business (Ross Tire), a cleaning/restoration service (Service Master Clean), and a hardware and garden supply store (Orchard Supply Hardware). Los Gatos Creek transects a portion of the project site and the Los Gatos Creek Trail recreational trail parallels a portion of the project site. A former Del Monte Foods site, now converted into the Monte Vista townhome complex, is located adjacent to this trail. At the eastern end of the project site are rail yards adjacent to the Caltrain San Jose Diridon Station and the San Jose Fire Department Training Facility.

During the site visit, evidence of dumping (furniture, tires, and other litter) was observed along the banks of Los Gatos Creek and in the creek itself, and evidence of homeless person encampments was observed. Several full 5-gallon buckets and other plastic containers of apparent automotive fluids were observed discarded along the right-of-way immediately south of Auzerais Avenue. Oily staining was observed on the ground surface beneath these containers.

### 6.0 Impacts and Mitigation

In the long-term, the replacement of an existing active rail bridge and provision of a tail track would not result in impacts related to hazardous materials.

Temporarily during construction, it is possible that contaminated materials common to railroad environments could be encountered and would need to be addressed with standard best management practices in accordance with federal and state regulations. Based on the data obtained during the site inspection, regulatory records review, and reports for previous investigations on the project site and its history, the following RECs have the potential to impact the project site:

- **Adjacent and nearby properties** have had documented releases of oil or hazardous materials that have the potential to migrate via groundwater toward the project site. Although there is no known evidence that contamination from nearby properties has migrated to the project site the presence of the project site within an urban corridor with multiple documented releases of oil and hazardous materials represents a REC.

- **Evidence of dumping** observed on the project site included several full 5-gallon buckets and other plastic containers of apparent automotive fluids long the right-of-way immediately south of Auzerais Avenue. Oily staining was observed on the ground surface beneath these containers. This dumping and apparent spill of
petroleum products represents a REC and may require remediation in accordance with State and local regulations.

- Based on the historic and present use of the project site for rail operations, the potential exists that chemicals commonly found along rail corridors including petroleum hydrocarbons and metals may have affected the project site. This current and historic use represents a REC.

The following mitigation measures/best management practices are recommended to minimize any potential for workers or the public to be exposed to hazardous materials temporarily during construction:

- Reuse of any soil generated during the bridge reconstruction should be governed by the Caltrain North and South CTX Soil Management Plan (SMP) (ERM, 2003). Soil should be stockpiled and sampled for TPH prior to reuse in the project area. Any soils that would require disposal off-site would require chemical profiling prior to disposal.

- The construction specifications and health and safety plan for the proposed construction should contain emergency response and contingency procedures for encountering unknown wastes and hazardous materials.

- The contractor performing demolition activities on the bridge structure should comply with the Cal/OSHA Lead in Construction Standard for protection of workers; properly control and contain paint dust and debris resulting from the demolition operation; and properly contain and dispose of the resulting paint chips, dust and debris.

7.0 CEQA Analysis

Table 2 summarizes the hazardous materials analysis conclusions in terms of the CEQA significance thresholds. With the incorporation of mitigation measures for temporary construction impacts as described in Section 6, no significant adverse impacts would occur.

<table>
<thead>
<tr>
<th>CEQA Guidelines Appendix G Thresholds</th>
<th>Project Impact/Conclusion</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?</td>
<td><strong>Less than Significant Impact.</strong> Temporarily during construction, there is the potential for encountering contaminated soil, as well as lead-based paints on the existing bridge. These type of materials are routinely addressed in JPB construction projects through standard best management practices in accordance with federal and state regulations and do not pose a “significant hazard” to the public or environment.</td>
</tr>
</tbody>
</table>
### In the long-term, the replacement of an existing active rail bridge and provision of a tail track would not create a significant hazard to the public or environment related to hazardous materials. Hazardous materials may be transported through the project area by UPRR freight rail operations, but the project would not increase hazards related to freight rail. In fact, the project would reduce such freight-related hazards by replacing a deteriorating bridge that has exceeded its useful life.

### Less than Significant Impact. Small quantities of potentially toxic substances (such as petroleum and other chemicals used to operate and maintain construction equipment) would be used in the project area and transported to and from the area temporarily during construction. Handling of these materials and any accidental spills would be addressed in accordance with federal, state and local requirements.

The replacement bridge would provide for safe railroad operations. The existing deteriorating bridge that has exceeded its useful life would be removed. Therefore, the project would not create conditions that would create a significant hazard due to accidents and there would be no impact in the long-term.

### No Impact. There are no existing or proposed schools within one-quarter mile of the project site.

### No Impact. The project site is not included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5.

### No Impact. The project site is located more than two miles southeast of the Mineta San Jose International Airport and is not within the land use plan or safety zone for the airport.

### No Impact. The nearest private airstrip is located more than five miles northwest of the project site, in Mountain View, CA. The project is not within any airport land use or safety zone.

### Less than significant impact. During construction, emergency access to and in the vicinity of the project site could temporarily be affected by lane closures, detours, and construction-related traffic. As noted in the Traffic Technical Report, a Traffic Management Plan would be implemented to ensure there is no interference with emergency vehicles/services or response/evacuation.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

**Federal CERCLIS list**

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there is 1 CERCLIS site within approximately 0.75 miles of the target property.

**Federal RCRA generators list**

RCRA-LQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity
generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA-LQG site within approximately 0.5 miles of the target property.

RCRA-SQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 29 RCRA-SQG sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent NPL
RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 12/05/2012 has revealed that there is 1 RESPONSE site within approximately 1.25 miles of the target property.

State- and tribal - equivalent CERCLIS
ENVIROSTOR: The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 12/05/2012 has revealed that there are 10 ENVIROSTOR sites within approximately 1.25 miles of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 12/17/2012 has revealed that there are 112 LUST sites within approximately 0.75 miles of the target property.

### State and tribal registered storage tank lists

**UST:** The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board’s Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 12/17/2012 has revealed that there are 2 UST sites within approximately 0.5 miles of the target property.

**AST:** The Aboveground Storage Tank database contains registered ASTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the AST list, as provided by EDR, and dated 08/01/2009 has revealed that there are 4 AST sites within approximately 0.5 miles of the target property.
EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC’s costs.

A review of the VCP list, as provided by EDR, and dated 12/05/2012 has revealed that there is 1 VCP site within approximately 0.75 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA’s listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 12/10/2012 has revealed that there is 1 US BROWNFIELDS site within approximately 0.75 miles of the target property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990’s. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 34 SWEEPS UST sites within approximately 0.5 miles of the target property.
### EXECUTIVE SUMMARY

**Local Land Records**

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

A review of the DEED list, as provided by EDR, and dated 12/10/2012 has revealed that there are 2 DEED sites within approximately 0.75 miles of the target property.

**Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.5 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/23/2011 has revealed that there are 22 FINDS sites within approximately 0.25 miles of the target property.

CUPA Listings: A listing of sites included in the county’s Certified Unified Program Agency database. California’s Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 58 CUPA Listings sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 10/21/1993 has revealed that there is 1 Notify 65 site within approximately 1.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners’ agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, and dated 12/11/2012 has revealed that there is 1 DRYCLEANERS site within approximately 0.5 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2011 has revealed that there are 61 HAZNET sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used
whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1.25 miles of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 118 EDR US Hist Auto Stat sites within approximately 0.5 miles of the target property.

## Executive Summary

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 19 EDR US Hist Cleaners sites within approximately 0.5 miles of the target property.

### Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA...
program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: SANTA CLARA COUNTY LOP
Case Worker: LL
Local Agency: SANTA CLARA COUNTY LOP
RB Case Number: 13-040
LOC Case Number: 07S1E18K02I
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates

Site History:
1987 In November, 4 underground storage tanks (gasoline and waste oil) were replaced at the site. 6 soil samples (#3 through #8) were collected from 13.5 to 14 feet below the ground surface (ft bgs) in the area of the fuel storage tanks and were reported to have maximum concentrations of 56 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 1.4 ppm Benzene, 0.94 ppm Toluene, and 16 ppm Xylenes. 2 soil samples (#9 and #10) were collected from 9 ft bgs below the waste oil storage tank and were only reported to have 45 ppm TPH as Diesel (TPHd) and 130 ppm Total Oil and Grease (TOG). Additional soil was excavated in each area and confirmation soil samples were collected from 10-15.5 ft bgs. Only analytical results for 3 of the 10 soil samples were found in the file with maximum concentrations of 33 ppm TPHg and 77 ppm TOG. 1996 In December, piping at the site was replaced. 6 soil samples (P1, P2, P7, P8, P10, and P11) were collected from 3-5 ft bgs below the dispensers. 5 soil samples (P3 through P6 and P9) were collected from 2.5-4 ft bgs along the piping. Maximum concentrations reported were for soil sample P8 collected beneath a dispenser of 1,400 ppm TPHg,
<25 ppm Benzene, 9.8 ppm Toluene, 35 ppm Ethylbenzene, and 220 ppm Xylenes. The maximum concentration of Methyl tert-Butyl Ether (MtBE) was 20 ppm reported in sample P10. Approximately 200 cubic yards of soil and pea gravel were removed from the site and disposed. 1999 In March, 8 Geoprobe borings (GP1 through GP8) were advanced to 28-36 ft bgs. 56 soil samples were collected and analyzed for TPHg, Benzene, Toluene, Ethylbenzene and Xylenes (BTEX), and MtBE. The samples were reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). Groundwater was encountered between 24.5-28 ft bgs in the borings. 8 grab groundwater samples were collected and reported to have maximum concentrations of 640 ppb TPHg, 5.11 ppb Benzene, 1.78 ppb Toluene, 0.59 ppb Ethylbenzene, 6.97 ppb Xylenes, 1.480 ppb MtBE, and 300 ppb Tert Butyl Alcohol (TBA). In November, 2 borings (B1 and B2) were advanced to 30 ft bgs and 6 monitoring wells (MW1 through MW6) were advanced to 40-41.5 ft bgs. 23 soil samples were collected and only reported to have low concentrations of MtBE. Periodic sampling of the groundwater monitoring wells began at this time. 2000 In November, a dual phase extraction (DPE) event was conducted on wells MW1 and MW6. A total of 4,185 gallons of groundwater and 40,625 cubic feet of soil vapor were extracted. 2001 In June, one well MW7 was advanced to 55.5 ft bgs. 4 soil samples were collected and analyzed for COCs; none of which were reported to be present above the laboratory reporting limits. In November, the corrective action of groundwater extraction and soil vapor extraction was approved by the oversight agency. 2002 In January, 3 direct push borings (DP1 through DP3) were advanced to 45 ft bgs within Bird and Auzerais Avenues. 6 soil samples were collected and were not reported to have concentrations of COCs above the laboratory reporting limits. Depth discrete grab groundwater samples were collected from each boring. A total of 5 samples were collected and only very low concentrations of Benzene, Toluene, MtBE, and TBA were reported for the sample collected from 45 ft bgs in DP1. DP1 was located within Auzerais Avenue between the site and the Dariano and Sons fuel leak investigation site (07S1E18K03f). 2003 In January, the groundwater and vapor extraction systems were started at the site. 2004 In May, the groundwater extraction system and soil vapor extraction system were shut down. It is estimated that it treated approximately 2,321,350 gallons of groundwater. In December, 5 Geoprobe borings (BA1 through BA5) were advanced to 32 ft bgs onsite. 10 soil samples were collected and were only reported to have very low to non-detectable concentrations.

CHEVRON STATION NO 93093 (Continued)

waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:
Owner/operator name: CHEVRON PRODUCTS COMPANY
Owner/operator address: P O BOX 6004
SAN RAMON, CA 94583
Owner/operator country: Not reported
Owner/operator telephone: (925) 842-5931
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:
Registry ID: 110012543499

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

3 additional CA_HAZNET: record(s) in the EDR Site Report.
395 BIRD AVE SS#9-3093 CHVRN (Continued)

Agency Type: Private
SIC Code: 0
SIC Code 2: Not reported
Primary Waste: Contaminated Ground Water
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

**Classification:** Small Small Quantity Generator

**Description:** Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time.
Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL
K N T V (Continued)

1005904301

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:
Registry ID: 110012544292

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Toluene, Xylene, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: January 1989 - 2 gasoline USTs and associated piping were removed.
One monitoring well was installed in 1994 and reported to contain
140,000 ppb TPhg, 23,000 ppb Benzene, 25,000 ppb Toluene, 3,100 ppb Ethylbenzene, and 17,000 ppb Xylenes. Additional monitoring wells
were installed onsite through 2005. Free product has been reported
onsite since December 2005.

PLANT #3 (Continued)

Site History: Del Monte Plant #3, a Brownfield site in San Jose, Santa Clara County sits on approximately 17 acres of land that housed one of the oldest fruit and vegetable cannery in the western United States. The original cannery was constructed prior to 1915 and reportedly was purchased by Del Monte in 1917. The site is located in a mixed industrial and residential area closed to major public transit lines. KB Home South Bay, Inc., (K&B), the current owner and developer of the property, performed remedial activities at former 15 undocumented underground storage tanks (USTs), associated piping, sumps, and soils impacted by polychlorinated biphenyls and metals. After removing the USTs, approximately 25,698 tons of contaminated soil and 3,000 gallons of impacted groundwater from the site were disposed of. K&B contractors completed the backfilling of the soil excavations with uncontaminated fill materials in late July 2007. When complete, the redevelopment project will include multi-family structures and a network of landscape areas including: (1) the Los Gatos Creek trail improved with native, riparian type plants, several salvaged walls from the cannery and the old Del Monte water towers; (2) a small park with a bocce ball court and picnic tables, and (3) a salvaged truss structure which displays several pieces of machinery salvaged from the historical cannery. Other project benefits include the improvement of regional water quality by implementing state-of-the-art post-construction storm water treatment measures and easy access to major public transportation lines: Valley Transit Agency line, Caltrain Diridon Station, and future downtown San Jose BART station.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA handlers to report activities such as:

- U.S. importer of hazardous waste
- Mixed waste (haz. and radioactive)
- Recycler of hazardous waste
- Transporter of hazardous waste
- Treater, storer or disposer of HW
- Underground injection activity
- On-site burner exemption
- Furnace exemption
- Used oil fuel burner
- Used oil processor
- User oil refiner
- Used oil fuel marketer to burner
- Used oil Specification marketer
- Used oil transfer facility
- Used oil transporter

.handler activities summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

### FINDS:

- Registry ID: 110002887314
- Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information
on stationary and mobile sources that emit criteria air pollutants and
their precursors, as well as hazardous air pollutants (HAPs).

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**RB Case Number:** 43-0592  
**LOC Case Number:** 07S1E18L07f  
**File Location:** Stored electronically as an E-file  
**Potential Media Affect:** Other Groundwater (uses other than drinking water), Soil  
**Potential Contaminants of Concern:** Benzene, Toluene, Xylene, Gasoline  
**Site History:** The Properties are located in a commercial area of San Jose, California and currently house various commercial properties. The Site is situated at an elevation of approximately 110 feet above mean sea level (msl). During past groundwater monitoring events, the depth to groundwater ranged from approximately 28 to 38 feet below ground surface (bgs). LFR reviewed historic information provided to us by...
Green Republic, information available on the State Water Resources Control Board (SWRCB) GeoTracker database, and information contained in files at the SCCDEH to identify the presence of data gaps at the Properties which require additional investigation. Based on available historical information and data gaps documented in our May 29, 2009 Work Plan, we then assessed the current soil vapor, soil, and groundwater conditions at the Properties. Files were reviewed for 861 Auzerais Avenue at the San Jose Building Department (SJBD), San Jose Fire Department (SJFD), and SCCDEH by Cornerstone arthGroup (Cornerstone) as part of their October 2008 Phase I Environmental Site Assessment (ESA) Report (Cornerstone, 2008). According to the SJBD, the 861 Auzerais Avenue property was occupied by the Floor Service Company since at least 1948, at which time a permit to build a warehouse was issued. In 1961, another permit to build an additional warehouse was issued. In 1979, an application to abandon a 550-gallon underground storage tank (UST) on the 861 Auzerais Avenue property was issued (Figure 1). Reportedly, the 550-gallon UST was abandoned in-place by filling it with slurry. Permits for remodeling the warehouses and office building were also issued. According to the 1984 Hazardous Materials Business Plan (HMBP), a diesel UST and an additional gasoline UST, each with an approximate 1,000-gallon capacity, were also documented to be on the 861 Auzerais Avenue property. However, based on information found on a map provided by Cornerstone, the diesel UST is actually located on the 381 Sunol Street property (Figure 1). The 1984 HMBP also indicated the use of various chemicals at the 861 Auzerais Avenue property including adhesives, finishers, thinners, sealants, and alcohols stored in retail containers. In 1994, the 861 Auzerais Avenue property use reportedly changed from manufacturing to a wholesale distributor of wood floor products. During a routine HMBP inspection, several violations were noted regarding improper storage of items. The hazardous waste noted as being used at the property included damaged products not returned to the supplier. On December 26, 1996, an environmental cleanup case (case number 07S1E18L07f) was opened by the SCCDEH based on the results of the soil boring investigation for 861 Auzerais Avenue. A review of the SWRCB GeoTracker database indicates that case number 07S1E18L07f under SCCDEH (and Regional Water Quality Control Board or RWQCB) jurisdiction remains open and in the Site assessment phase with respect to gasoline as the potential contaminant of concern. Floor Service Supply Company is listed as the responsible party (RP). The GeoTracker database also lists a second, closed case (case number 07S1E18L01f) at the Site, with Floor Service Supply Company again listed as the RP, and with gasoline as the potential contaminant of concern. The overseeing regulatory agency for the close case was listed as the Santa Clara Valley Water District (SCVWD).

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The site is located in the north-central portion of the Santa Clara Valley, at the southeast corner of West San Carlos Street and Lincoln Avenue in the city of San Jose, Santa Clara County, California. The site is relatively flat and is paved with asphalt and concrete. The fuel tanks and pump islands have been removed and the site is now occupied by T & D Complete Auto Repair. Compliance & Closure, Inc. (CCI) completed the well sampling for the First Quarter Semi-Amal report on March 20, 2012. TPHg, Benzene and Methyl Tert Butyl Ether (MTBE) detected in groundwater samples collected during the first quarter 2012 event. LPH was measured in monitoring well MWI at 1.07 feet this quarter. ETIC installed a dual-phase extraction system which operated from May 2007 to July 2008. The system was terminated due to low mass removal rates and operational problems with the system. ETIC continued quarterly and semi-annual monitoring of the site until March 2009. Shortly thereafter, ETIC chose to discontinue my further work at the site. CCI was retained by the property owner in May 2010 to continue the investigation and remediation activities at the site. In January 2011 CCI conducted a quarterly sample round of...
the 13 wells. CCI has proposed to install a GW Pump and treat system and a SVE system at the site to remediate groundwater and soil contamination. In addition CCI has proposed to conduct off-site investigations.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE RADIATOR (SJ REDEVLPMNT) (Continued)

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 12/18/1991
Comments: Completed Site Screening. In January 1989, additional sampling was conducted at the site. Soil boring results detected total oil and grease (TOG) and total petroleum hydrocarbons as diesel (TPHd) in excess of 1000 ppm. Lead was detected at 938 ppm. In May 1989, two groundwater monitoring wells (MW-1 and MW-2) were installed at the property. Lead was detected in groundwater at a concentration of 0.181 ppm. In May 1989, contaminated soil was removed from the previous sampled area. Final soil sample results indicated only one sample contained TOG at 780 ppm and lead at 191 ppm. The sample that contained the TOG and lead was collected beneath the foundation of the building. The excavations were backfilled with clean, imported fill.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).
SPEEDY AUTO DETAIL (Continued)

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

MAP FINDINGS

MAP ID: 
Direction: 
Distance: 
Elevation: 
Site: 

EDR ID Number: 1007989062
Database(s): 
EPA ID Number: 

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected:
Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:
Waste Oil / Motor / Hydraulic / Lubricating, Diesel
Site History:
The Peninsula Corridor Joint Powers Board, owner and operator of the
Caltrain commuter rail system, plans to make improvements to the
existing Diridon Station located at 65 Cahill Street in San Jose. The site is currently used for commercial purposes and is located within a commercial/industrial area of San Jose. The site use will remain the Diridon Station. The project includes demolition of the maintenance facilities and constructing two new platforms at the station immediately to the west and outside of the historic platforms, along with new tracks, platform canopies, and station amenities. The site is currently a passenger train depot and maintenance yard. There are currently seven tracks used for storage and maintenance activities. According to site personnel and historical reviews, railroad operations at the site have remained generally constant since approximately the 1880’s. However, the onsite maintenance facilities, including the inspection pits, the train shed, and the water collection and treatment systems were not constructed until the mid 1990’s. Soil analytical results indicate TPH diesel-range detections above the ESL of 100 mg/kg in five of 36 samples analyzed at concentrations ranging from 850 to 14,000 mg/kg and TPH motor oil-range detections above the ESL of 500 mg/kg in 12 samples of 36 analyzed at concentrations ranging from 950 to 12,000 mg/kg. Arsenic was detected at levels above the ESL of 0.38 mg/kg in 22 samples ranging from 1.3 to 48 mg/kg; however, 21 of the 22 detections were at concentrations between 1.3 to 7.9 mg/kg, which are similar to documented regional arsenic background concentrations and below the arsenic action level of 8 mg/kg established in the SMP. Ground water analytical results indicate TPH diesel-range detections in 2 samples above the ESL of 100 a%g/L ranging from 18,000 to 170,000 a%g/L and one TPH motor oil-range detection of 17,000 a%g/L above the ESL of 100 a%g/L. MTBE was detected at 6.9 a%g/L in one sample, above the ESL of 2.3 a%g/L. The Phase I ESA identified a number of leaking underground storage tank sites potentially upgradient of the Diridon Station and the MTBE detection is most likely related to one of these adjacent sites. Dissolved lead was detected at a concentration of 21 a%g/L in one sample which is above the MCL of 2.5 a%g/L. The site is located approximately 0.15 mile west of Los Gatos Creek and 0.3 mile west of Guadalupe River. The site is not within the 100-year flood plain and wetlands are not present on the site.

**Handler Activities Summary:**

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region.

**Treat To Water:** Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

**Complexity:** Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Site History:**
The San Jose Glass Company manufactured commercial residential window including glass cutting, edge polishing, and fabrication at the Site from 1964 to 1988. San Jose glass operated a 1,000-gallon UST during their operation at the Site. The 1,000-gallon UST was abandoned in-place in approximately 1988. Soil Samples were collected from a boring advanced adjacent to the abandoned UST in 1998. Laboratory analyses of soil samples revealed the presence of total petroleum hydrocarbons as gasoline, benzene, toluene, ethyl benzene and xylenes. Subsurface investigation conducted in 1999 and 2000 also revealed the...
S101303846

SAN JOSE GLASS CO. (Continued)

presence of TPhg and BTEX in soil and groundwater at the Site, as well as the presence of free product in the vicinity of the abandoned UST. The Santa Clara Valley Water District requested that CAP be prepared to evaluate alternatives for cleanup of soil and groundwater associated with the release from the UST (SCVWD, 2001). This CAP has been prepared in accordance with the technical requirements of the State of California UST regulations. This CAP presents the results of investigations performed to delineate impacts, identifies applicable cleanup goals and evaluates remedial alternatives to achieve these goals. The validity of groundwater sampling data collected during 2009 and 2010 has not been documented, and the water quality data does not appear to be reliable. Groundwater samples should be collected in a manner that reduces or eliminates the possibility of loss of volatile constituents from the sample. The water sample field data sheets provided, indicate that wells sampled during 2009 and 2010 were evacuated to dryness and allowed to recover prior to sampling. GRI reported that high-volume high-vacuum extraction was performed in unspecified wells at unspecified periods between January 1, 2009 and June 19, 2009. The dates of groundwater sample collection in 2009 relative to extraction work have not been reported. This wellhead extraction/wellcleaning work may have resulted in air being trapped in the pore spaces, with lingering effects on water chemistry. The reports for 2009 and 2010 well sampling failed to provide documentation to prove that site monitoring wells were properly gauged, purged, and sampled thereby failed to document a valid groundwater sampling procedure resulting in unreliable groundwater quality testing results.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

The Site is located in a commercial and residential neighborhood southwest of downtown San Jose, approximately one-half mile west-southwest from the Guadelupe River. The site is currently occupied by an auto sales facility. The site is surrounded on the east, south, and west by commercial/retail properties and on the northeast by residential properties. The site is zoned for commercial use. Four gasoline underground storage tanks (USTs) (Tanks A through D on attached Site figures) and one waste oil underground storage tank (UST) were removed from the site in mid-1987. Soil samples collected beneath the removed USTs showed no significant hydrocarbon impacts except below Tank A. In September of 1987, Balch Petroleum, Inc. excavated contaminated soil beneath Tank A to a depth of 21 feet below ground surface (bgs). Over 130 cubic yards of petroleum hydrocarbon affected soils were removed and aerated on-site for approximately four to six weeks. In December of 1987, the aerated soil was re-tested and backfilled into the UST excavation pit. Several subsurface investigations were conducted at the site between 1990 and 2006. These investigations, which included the drilling and sampling of at least 20 soil borings and the installation of seven groundwater monitoring wells (MW-1 through MW-7), have shown hydrocarbon impacts on the upgradient (south-southeast) side of the former USTs, and minimal hydrocarbon impacts downgradient from the former USTs. An air sparge and soil vapor extraction (AS/SVE) remediation system was installed on the Site in early 2002, and operated from April 2002 to March 2004. Follow-up quarterly groundwater monitoring of site wells, along with two limited subsurface investigations in May 2005 and April 2006, showed limited downgradient residual hydrocarbon impacts on the Site. On March 27, 2007, ARS submitted a Closure Request Report to the Santa Clara County Department of Environmental Health (SCCDEH). This report included a Site Conceptual Model that posited the following key...
elements: # The vast majority of hydrocarbon impacts encountered in soil and groundwater beneath the Site do not appear to have originated on the project site, but rather from the gas station formerly located approximately 85 feet south from the Site at 1298 W. San Carlos Street (see Figure 3). Soil sampling at 15 feet in depth beneath the removed Site USTs in 1987 showed significant hydrocarbon releases only beneath one of the USTs (Tank A in Site figures). Also, of all the soil samples collected during UST removal activities and in subsequent borings and wells, the only significant hydrocarbon impacts in soils at 15 feet in depth are in these samples below Tank A. On the other hand, soils at about 25 to 30 feet in depth are hydrocarbon impacted over a wide area, both north (downgradient) and south (upgradient) from the former Site USTs. # Shallow soils beneath the site generally consist of low permeability silt- and clay-dominated layers down to about 38 feet in depth, followed by high permeability sand and gravel-dominated layers down to at least 85 feet in depth (see Figure 4). Thin sand and gravel interbeds which are present in the upper silt/clay zone include a fairly continuous thin sand layer from approximately 18 to 22 feet in depth, and another fairly continuous sand and gravel layer from about 33 to 35 feet in depth. Historically, groundwater has been encountered in both the thin sand at 33 to 35 feet in depth, and in the deeper and thicker sand layer below 38 feet in depth. Soil hydrocarbon impacts are most prevalent in soils above the current groundwater table in a silt and clay layer at about 25 to 30 feet in depth, and not in the shallower sand and gravel layer at about 18 to 22 feet in depth or in the deeper sand and gravel layers. Groundwater hydrocarbon impacts have historically included: (1) Elevated hydrocarbon impacts in a shallower thin sand that appear to have migrated onto the project site from the former ga

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002907560

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type: Cleanup Program Site
Case Worker: LG
Local Agency: Not reported
RB Case Number: 43s0946
File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Environmental Interest/Information System
CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

SAN JOSE SPORTS ARENA (Continued)

Alternate Address: NORTH OF WEST SANTA CLARA STREET
Alternate City,St,Zip: SAN JOSE, CA 95110
Alternate Address: WEST, JOHN & MONTGOMERY STREET
Alternate City,St,Zip: Not reported
Alternate Address: 525 WEST SANTA CLARA STREET
Alternate City,St,Zip: SAN JOSE, CA 95110

Background Info: The current address on the building is 525 West Santa Clara Street. The site is bounded by Autumn Street to the east; West Santa Clara Street to the south; Julian Street, Montgomery Street, and St. John Street to the north; and the Southern Pacific Railroad tracks to the west. In May 1987, a site screening identified contaminants in the soil as polycyclic aromatic hydrocarbons (PAH’s) from a former Pacific Gas & Electric (PG&E) site with concentrations ranging from non-detect to above 3,000 ppm in localized areas. EPA completed screening site inspection in 1989. The City of San Jose Redevelopment Agency (SJRA) acquired 22 parcels in a former industrial area in downtown San Jose that had a former Pacific Gas & Electric (PG&E) coal gasification plant, various automobile repair and service businesses, underground storage tanks, oil/water clarifiers, and drums.

Comments Date: 05041987
Comments: Site Screening Done: Contaminants - PNA’s (2-180 ppm), PB (160-1400 ppm), AS (14-29 ppm), HG (less than 0.10-2.5 ppm)
Comments Date: 05041987
Comments: & CN (less than 1.0 ppm).
Comments Date: 05232003
Comments: A Deed Restriction limiting future use of property including the material encapsulation areas was filed in May 2003 which requires no disturbance of the encapsulated areas and the slurry area will be done as quickly as possible.
Comments Date: 05232003
Comments: health and safety plan prepared, the material from the encapsulation area will be handled properly, and repairs to the wall. If the areas are disturbed, DTSC is to be notified, a
Comments Date: 05232003
Comments: plan. RP excavated PNA and gasoline contaminated soil and backfilled with clean fill. GW treatment will be performed
Comments Date: 06201991
Comments: was performed under San Francisco RWQCB’s requirements. Current plan.
Comments Date: 06201991
Comments: later by RP under SF RWQCB’s requirement. Groundwater treatment files at the RWQCB list the site closed on 06/20/97.
Comments Date: 09061989
Comments: Site Screening Done: EPA completed Screening Site Inspection
Comments Date: 09061989
Comments: (SSI) and recommends Listing Site Inspection (LSI).

CompletedArea Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 05/23/2003
Comments: A Deed Restriction limiting future use of property including the material encapsulation areas which requires no disturbance of the encapsulated areas and the slurry wall. If the areas are disturbed, DTSC is to be notified, a health and safety plan prepared, the material from the encapsulation area will be handled properly, and repairs to the area will be done as quickly as possible.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 04/27/2007
Comments: No problems noted during inspection.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/30/2012
Comments: DTSC conducted its annual site visit to check the condition of the cap over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. During the inspection, numerous cracks were observed in the Hewlett Packard Pavilion parking lot. The cap consists of two feet of fill and clay and is overlaid with asphalt for use as a parking lot. The observed cracks appeared to only be in the asphalt, and the cap appears to remain protective of human health. There was no evidence of any activities prohibited by the Land Use Covenant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/15/2008
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 07/16/2009
Comments: Upon inspection, soil covered, concrete and asphalt surfaces appeared to be in good condition. There was no evidence of any activities prohibited by the Deed Restriction. No major cracks were observed on the concrete surfaces just minor cracks.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 09/30/2010
Comments: The Site is the location of a sports arena, adjacent park, and parking lot. Upon inspection, soil covered, concrete and asphalt surfaces appeared to be in good condition. There was no evidence of any activities prohibited by the Deed Restriction. No major cracks were observed on the concrete surfaces, just minor cracks.
SAN JOSE SPORTS ARENA  (Continued)

Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 06/06/2011
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 05/02/2008
Comments: The remedy (cap) continues to be protective of public health, safety and the environment. The next 5 year review is due March 2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/20/1991
Comments: Report of Completion of Interim Remedial Measure/Removal Action (IRM/RA). Polynuclear aromatic hydrocarbons (PAHs) contaminated soil (23,000 cubic yards (CY)) resulting from a former PG&E gas manufacturing site was excavated and encapsulated into the nearby parking lots. Gasoline contaminated soil (17,000 CY) was also excavated and stockpiled nearby for vapor extraction treatment. The excavated area was backfilled with clean fill.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/28/1991
Comments: Completion of Phase I Construction Documentation Report. Required a deed restriction to be filed. PNA contaminated soil from a former PG&E site was excavated and encapsulated into a nearby parking lot. Gasoline contaminated soil was also excavated and stockpiled on a nearby lot for vapor extraction treatment. The excavated areas were backfilled with clean soil. The volume of excavation for PNA contaminated soil was approximately 23,000 cubic yards. The volume of excavation for gasoline contaminated soil was approximately 17,000 cubic yards. Groundwater treatment was performed under San Francisco RWQCB’s requirements. Current files at the RWQCB list the site closed on 06/20/97.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Soils Management Plan
Completed Date: 07/21/2006
Comments: Comments on the report were: a soil management plan is required; asphalt removal, if needed and liquefaction issues for the SE corner will need to be addressed, and any other project ("Ball Park") that might involve a parking structure to be added to the parking lot at the HP pavilion.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 06/27/2003
Comments: Site Screening completed which recommended No Further Action. The soil remediation was completed in 1992 by a paved parking lot system, slurry wall around the Arena footprint, and soil cap at the Arena.
SAN JOSE SPORTS ARENA (Continued)

Green. The site was approved as closed by RWQCB in 1997. A deed restriction was recorded by DTSC in May 2003.

SAN JOSE SPORTS ARENA (Continued)

Completed Date: 05/30/2012
Comments: DTSC conducted its annual site visit to check the condition of the cap over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. During the inspection, numerous cracks were observed in the Hewlett Packard Pavilion parking lot. The cap consists of two feet of fill and clay and is overlaid with asphalt for use as a parking lot. The observed cracks appeared to only be in the asphalt, and the cap appears to remain protective of human health. There was no evidence of any activities prohibited by the Land Use Covenant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/15/2008
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 07/16/2009
Comments: Upon inspection, soil covered, concrete and asphalt surfaces appeared to be in good condition. There was no evidence of any activities prohibited by the Deed Restriction. No major cracks were observed on the concrete surfaces just minor cracks.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 09/30/2010
Comments: The Site is the location of a sports arena, adjacent park, and parking lot. Upon inspection, soil covered, concrete and asphalt surfaces appeared to be in good condition. There was no evidence of any activities prohibited by the Deed Restriction. No major cracks were observed on the concrete surfaces, just minor cracks.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 06/06/2011
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 05/02/2008
Comments: The remedy (cap) continues to be protective of public health, safety and the environment. The next 5 year review is due March 2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/20/1991
Comments: Report of Completion of Interim Remedial Measure/Removal Action (IRM/RA). Polynuclear aromatic hydrocarbons (PAHs) contaminated soil (23,000 cubic yards (CY)) resulting from a former PG&E gas manufacturing site was excavated and encapsulated into the nearby environment.
SAN JOSE SPORTS ARENA (Continued)

parking lots. Gasoline contaminated soil (17,000 CY) was also excavated and stockpiled nearby for vapor extraction treatment. The excavated area was backfilled with clean fill.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/28/1991
Comments: Completion of Phase I Construction Documentation Report. Required a deed restriction to be filed. PNA contaminated soil from a former PG&E site was excavated and encapsulated into a nearby parking lot. Gasoline contaminated soil was also excavated and stockpiled on a nearby lot for vapor extraction treatment. The excavated areas were backfilled with clean soil. The volume of excavation for PNA contaminated soil was approximately 23,000 cubic yards. The volume of excavation for gasoline contaminated soil was approximately 17,000 cubic yards. Groundwater treatment was performed under San Francisco RWQCB’s requirements. Current files at the RWQCB list the site closed on 06/20/97.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Soils Management Plan
Completed Date: 07/21/2006
Comments: Comments on the report were: a soil management plan is required; asphalt removal, if needed and liquifaction issues for the SE corner will need to be addressed, and any other project (“Ball Park”) that might involve a parking structure to be added to the parking lot at the HP pavilion.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 06/27/2003
Comments: Site Screening completed which recommended No Further Action. The soil remediation was completed in 1992 by a paved parking lot system, slurry wall around the Arena footprint, and soil cap at the Arena Green. The site was approved as closed by RWQCB in 1997. A deed restriction was recorded by DTSC in May 2003.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

groundwater samples were collected from the 3 borings and were the 6th UST, with 10,000 ppm TPHg and 30 ppm Ethylbenzene. Grab sample collected from 20 ft bgs in boring GP-2 located adjacent to reporting limits. The highest concentrations were reported for the to have very low concentrations of TPHg present above the laboratory concern. Soil samples collected from boring GP-1 were only reported to have detectable concentrations of constituents of 30 ft bgs. Soil samples collected from boring GP-3 were not reported to be present above the laboratory reporting limits. In November, 3 Geoprobe borings (GP-1 through GP-3) were drilled onsite to a depth of 30 ft bgs. Soil samples collected from boring GP-3 were not reported to have detectable concentrations of constituents of concern. Soil samples collected from boring GP-1 were only reported to have very low concentrations of TPHg present above the laboratory reporting limits. The highest concentrations were reported for the sample collected from 20 ft bgs in boring GP-2 located adjacent to the 6th UST, with 10,000 ppm TPHg and 30 ppm Ethylbenzene. Grab groundwater samples were collected from the 3 borings and were
CAMPISI TRUST (Continued)

reported to have a maximum concentration of 5,100 parts per billion TPHg, 6.6 ppb Benzene, 5.1 ppb Toluene, 200 ppb Ethylbenzene, 240 ppb Xylenes, and 6.5 ppb 1,2-Dichloroethane (DCA). The sample collected from GP-2 was also reported to have 3,200 ppb hydrocarbons in the C8-C18 range with no diesel pattern present. 2007 In August, 4 monitoring wells (MW1 through MW4) were installed on and off-site to approximately 29 ft bgs and one geoprobe boring (GP4) was advanced onsite to approximately 24 ft bgs. 15 soil samples were collected and reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). A grab groundwater sample was collected from GP4 and was reported to contain 62 ppb TPHg, 1.9 ppb Benzene, and 0.64 ppb Xylenes. In October, well MW5 was installed onsite to approximately 30 ft bgs to the south of UST T1. 4 soil samples were collected and reported to contain maximum concentrations of 390 ppm TPHg at 16 ft bgs and 0.018 ppm cis-1,2-dichloroethene (cis-1,2-DCE) at 12 ft bgs. All other constituents were not reported to be present above the laboratory reporting limits. Following installation, all the monitoring wells were sampled and reported to contain maximum concentrations of 180 ppb TPHg, 280 ppb cis-1,2-DCE, 3.8 ppb 1,2-Dichloroethane (1,2-DCA), 19 ppb PCE, 8.2 ppb Trichloroethylene (TCE), 3.3 ppb trans-1,2-Dichloroethene, and 1.1 ppb Vinyl Chloride (VC). 2011 In December, the final groundwater monitoring event was conducted.

### Site History:

The site is located in a commercial and industrial area of San Jose on the northern corner of North Montgomery and West Saint John Streets. The property (APN 259-29-001), presently vacant, was occupied by the San Jose Foundry until 2008. A combined warehouse and office building is located along the eastern, southern, and western property boundaries. The central and northern areas of the site are paved. Prior to this phase of work, a network of three groundwater monitoring wells were installed at the site (Figure 3, Table 1). The San Jose Arena is located south and west of the site, and commercial parcels are located north and east of the site. The confluence of the Guadalupe River and the Los Gatos Creek is approximately 750 feet east of the site. Evidence of gasoline leakage into soils at the site was discovered when an underground gasoline storage tank (UST) was excavated in March 1987. The former UST location is illustrated in Figure 3. Analytical results for soil samples collected during a 1987.
phase of investigation indicated that soils in the immediate vicinity of the former UST contained up to 2,200 parts per million (ppm) of total petroleum hydrocarbons as gasoline (TPHg). Four exploratory soil borings, SB-1 through SB-4 were drilled in the vicinity of the former UST in 1987 (Figure 3). The results for the analysis of two soil samples from Boring SB-4 located approximately 24 feet east of the tank excavation area ranged from 50 to 110 ppm of TPHg (Table 2). Two groundwater monitoring Wells, LF-1 and LF-2 were installed at the site in 1991. A third groundwater monitoring well, LF-3, was installed in 1992. A soil sample collected at a depth of 14 feet from the boring for well LF-1 contained 3,500 ppm of TPHg. Concentrations of gasoline compounds in groundwater samples collected from Well LF-1 have remained at levels above regulatory concern since the well was installed in 1991. Groundwater testing data collected from Wells LF-2 and LF-3 have not indicated any significant gasoline-impact above laboratory reporting levels for TPHg, BTEX, and MTBE during the six sampling events for these wells. The historic groundwater flow direction has been toward the northeast. Cores recovered during previous drilling operations revealed that the upper 10 to 13 feet of sediments beneath the site are composed generally of silty and clayey sediments. Thin sandy units interbedded with silts and clays have been logged in sediments beneath 13 feet bgs to the total depths explored (28 feet bgs). Soil samples collected from the boring from well LF-1, drilled near the former UST, indicate that the vertical extent of the petroleum hydrocarbon release attenuates with depth. In various phases WELLTEST has advanced a total of 11 direct-push exploratory borings and collected continuous soil-core and grab-groundwater samples from these borings. Groundwater was first encountered approximately 16 feet bgs in the borings. Based upon the historical groundwater monitoring data and the results of the grab groundwater samples collected, the plume appears to be migrating toward the northeast. The lateral extent of the plume has been defined to the north, east and west, and has been define to moderate concentrations to the south.

Description: A transformer was in the process of being moved when it fell from a truck causing the product to spill onto asphalt and approximately 5-10 gallons went into a storm drain. A clean up crew is on scene and in the process of vacuuming it out of the drain. A sample will be obtained for lab purposes.

Description:

Per the NRC report, due to equipment failure, a pole mounted transformer spilled transformer oil onto an asphalt surface and into a storm drain. 3 gallons of the 7 went into the storm drain. Absorbents were applied and material contained.

RB Case Number: 43s1030
File Location: Not reported
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents
Site History: No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

MAP FINDINGS

151 ALMADEA ADOBE2T2DEWTRNG (Continued)  S106101950

SIC Code:  7372
SIC Code 2:  Not reported
Primary Waste:  Contaminated Ground Water
Primary Waste Type:  Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (e.g., BOD, Hardness, TRF, Chloride). ‘Manageable’ hazardous wastes (e.g., inorganic salts and heavy metals) are included in this category.
Secondary Waste:  Not reported
Secondary Waste Type:  Not reported
Design Flow:  0
Baseline Flow:  0
Reclamation:  No reclamation requirements associated with this facility.

POTW:  The facility is not a POTW.
Treat To Water:  Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.
Complexity:  Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

**FINDS:**

- Registry ID: 110009556088

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of hazardous waste facilities.
PACIFIC BELL (Continued)

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FMC 333 WEST JULIAN (Continued)

Longitude: -121.899254322052
Case Type: Cleanup Program Site
Case Worker: NMK
Local Agency: Not reported
RB Case Number: 43S0253
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Sediments, Soil, Soil Vapor, Surface water

Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Trichloroethylene (TCE), Vinyl chloride, Other Petroleum

Site History: The area of the Site is approximately 13 acres, centered on Old West Julian Street, bounded on the west by the Guadalupe River, on the east by the Guadalupe Parkway (Route 87), on the north by the Union Pacific Railroad, and on the south by West Julian Street. The Site is under development by Sobrato Development Companies (SDC), the current owner. Two buildings and a parking structure have been completed. Construction on a third building was discontinued prior to completion due to economic reasons. FMC and predecessor companies occupied the Site from the early 1900s through 1986. Manufacturing operations, including production of agricultural machinery, food-processing equipment, and military tracked vehicles, occurred at the Site beginning in the early 1900s. Manufacturing operations at the Site ceased in 1986 and the facility was leased for warehousing and other storage purposes. In June 1998, FMC sold the property to SDC. FMC initiated environmental investigations at the Site in 1986. Soil sampling in former manufacturing and product storage areas revealed the presence of petroleum hydrocarbons, volatile organic compounds (VOCs), and metals. Further investigations included the installation of groundwater monitoring wells that detected VOC constituents in two shallow water-bearing zones beneath the Site. Quarterly groundwater monitoring was conducted from the third quarter of 1989 through the first quarter of 2001. Semi-annual groundwater monitoring and reporting began in April 2001. On June 21, 1989, the State of California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) adopted Order Number 89-107, Site Cleanup Requirements for FMC Corporation-Ground Systems Division, 333 West Julian Street, San Jose, Santa Clara County (RWQCB, 1989). On August 15, 1990, Order Number 90-122 (RWQCB, 1990) was adopted by the RWQCB, amending Order Number 89-107 with respect to the adoption of final Site cleanup levels. On January 21, 1998, Order Number 98-006 was adopted (RWQCB, 1998) for the Site, amending Orders 89-107 and 90-122 with respect to revising soil cleanup standards and adding additional tasks to protect groundwater and address risks associated with exposure to residual soil contamination. On March 21, 2001, Order No. 01-031, Final Site Cleanup Requirements and Rescission of Orders Nos. 89-107, 90-122, and 98-006 for FMC Corporation, for the property located at 333 West Julian Street, San Jose, Santa Clara County (RWQCB, 2001) was adopted by the RWQCB. This annual compliance report is being submitted to the RWQCB as required by Order No. 01-031, Provision D.5. FMC implemented VOC source removal using a Soil Vapor Extraction system in the southwest portion of the Site from 1991 through March 1994. In addition, a groundwater extraction and treatment system for the A-level aquifer operated at the Site from March 1992 through January 1997, when it was discontinued due to changed groundwater flow directions, limited mass removal over time, and completion of effective source removal. Authorization to discontinue operation of the groundwater extraction and treatment system was given by the
MAP FINDINGS

FMC 333 WEST JULIAN (Continued)  S106235203

RWQCB in their letter to FMC, dated January 2, 1997 (RWQCB, 1997). The RWQCB documented the achievement of meeting the Site soil cleanup goals for chlorinated solvents in prior Order No. 98-006. FMC performed a natural attenuation evaluation in 2000 (HSI GeoTrans, 2000) to consider methods of remediating the residual VOCs present in Site groundwater. The evaluation concluded that VOC degradation could be accelerated through the introduction of an electron donor that would enhance the biodegradation. Cheese whey was selected as the electron donor material, and, in accordance with Task C.2. of Order Number 01-031 and the Work Plan for In-Situ Bioremediation Using Cheese Whey Injection (Work Plan) dated May 30, 2001 (GeoTrans, 2001), cheese whey injection was conducted at ten Site

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### Federal NPL site list

**NPL:** National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

- EPA Region 5
  - Telephone: 312-886-6686
- EPA Region 10
  - Telephone: 206-553-8665

**Proposed NPL:** Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

| Date Made Active in Reports: | Last EDR Contact: 03/01/2013 |
| Number of Days to Update: | Next Scheduled EDR Contact: 04/22/2013 |

**NPL LIENS:** Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Data Release Frequency: Quarterly
**Federal Delisted NPL site list**

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

- Date of Government Version: 02/01/2013
- Date Data Arrived at EDR: 03/01/2013
- Date Made Active in Reports: 03/13/2013
- Number of Days to Update: 12
- Last EDR Contact: 03/01/2013
- Next Scheduled EDR Contact: 04/22/2013
- Data Release Frequency: Quarterly

**Federal CERCLIS list**

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

- Date of Government Version: 02/04/2013
- Date Data Arrived at EDR: 03/01/2013
- Date Made Active in Reports: 03/13/2013
- Number of Days to Update: 12
- Last EDR Contact: 03/01/2013
- Next Scheduled EDR Contact: 06/10/2013
- Data Release Frequency: Quarterly

**FEDERAL FACILITY: Federal Facility Site Information listing**

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

- Date of Government Version: 07/31/2012
- Date Data Arrived at EDR: 10/09/2012
- Date Made Active in Reports: 12/20/2012
- Number of Days to Update: 72
- Last EDR Contact: 01/11/2013
- Next Scheduled EDR Contact: 04/22/2013
- Data Release Frequency: Varies

**Federal CERCLIS NFRAP site List**

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

- Date of Government Version: 02/05/2013
- Date Data Arrived at EDR: 03/01/2013
- Date Made Active in Reports: 03/13/2013
- Number of Days to Update: 12
- Last EDR Contact: 01/04/2013
- Next Scheduled EDR Contact: 03/11/2013
- Data Release Frequency: Quarterly

**Federal RCRA CORRACTS facilities list**

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transports are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.
Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

- Date of Government Version: 12/19/2012
- Date Data Arrived at EDR: 12/26/2012
- Date Made Active in Reports: 02/27/2013
- Number of Days to Update: 63
- Source: Environmental Protection Agency

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- Date of Government Version: 12/19/2012
- Date Data Arrived at EDR: 12/26/2012
- Date Made Active in Reports: 02/27/2013
- Number of Days to Update: 63
- Source: Environmental Protection Agency

LUCIS: Land Use Control Information System
LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

- Date of Government Version: 12/09/2005
- Date Data Arrived at EDR: 12/11/2006
- Date Made Active in Reports: 01/11/2007
- Number of Days to Update: 31
- Source: Department of the Navy

Federal ERNS list

ERNS: Emergency Response Notification System
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

- Date of Government Version: 12/31/2012
- Date Data Arrived at EDR: 01/17/2013
- Date Made Active in Reports: 02/15/2013
- Number of Days to Update: 29
- Source: National Response Center, United States Coast Guard

State- and tribal - equivalent NPL

RESPONSE: State Response Sites
Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

- Date of Government Version: 12/05/2012
- Date Data Arrived at EDR: 12/06/2012
- Date Made Active in Reports: 01/15/2013
- Number of Days to Update: 40
- Source: Department of Toxic Substances Control

State- and tribal - equivalent CERCLIS
ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 12/05/2012  Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 12/06/2012  Telephone: 916-323-3400
Date Made Active in Reports: 01/15/2013  Last EDR Contact: 03/14/2013
Number of Days to Update: 40  Next Scheduled EDR Contact: 05/20/2013
Data Release Frequency: Quarterly

State and tribal landfill and/or solid waste disposal site lists

SWF/LF (SWIS): Solid Waste Information System

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 11/19/2012  Source: Department of Resources Recycling and Recovery
Date Data Arrived at EDR: 11/19/2012  Telephone: 916-341-6320
Date Made Active in Reports: 01/04/2013  Last EDR Contact: 02/18/2013
Number of Days to Update: 46  Next Scheduled EDR Contact: 06/03/2013
Data Release Frequency: Quarterly

State and tribal leaking storage tank lists

LUST REG 8: Leaking Underground Storage Tanks

California Regional Water Quality Control Board Santa Ana Region (8). For more current information, please refer to the State Water Resources Control Board’s LUST database.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this
web site as a public service. It contains addresses of some locations where law enforcement agencies reported
they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites.
In most cases, the source of the entries is not the Department, and the Department has not verified the entry
and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example,
contacting local law enforcement and local health departments.
HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

TOXIC PITS: Toxic Pits Cleanup Act Sites

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

CDL: Clandestine Drug Labs

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.
### Local Lists of Registered Storage Tanks

**CA FID UST: Facility Inventory Database**

The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

- **Date of Government Version:** 10/31/1994
- **Source:** California Environmental Protection Agency
- **Telephone:** 916-341-5851
- **Last EDR Contact:** 12/28/1998
- **Next Scheduled EDR Contact:** N/A
- **Data Release Frequency:** No Update Planned

**UST MENDOCINO: Mendocino County UST Database**

A listing of underground storage tank locations in Mendocino County.

- **Date of Government Version:** 09/23/2009
- **Source:** Department of Public Health
- **Telephone:** 707-463-4466
- **Last EDR Contact:** 03/04/2013
- **Next Scheduled EDR Contact:** 06/17/2013
- **Data Release Frequency:** Annually

**HIST UST: Hazardous Substance Storage Container Database**

The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

- **Date of Government Version:** 10/15/1990
- **Source:** State Water Resources Control Board
- **Telephone:** 916-341-5851
- **Last EDR Contact:** 07/26/2001
- **Next Scheduled EDR Contact:** N/A
- **Data Release Frequency:** No Update Planned

**SWEEPS UST: SWEEPS UST Listing**

Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

- **Date of Government Version:** 06/01/1994
- **Source:** State Water Resources Control Board
- **Telephone:** N/A
- **Last EDR Contact:** 06/03/2005
- **Next Scheduled EDR Contact:** N/A
- **Data Release Frequency:** No Update Planned

### Local Land Records

**LIENS 2: CERCLA Lien Information**

A Federal CERCLA (‘Superfund’) lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

- **Date of Government Version:** 02/16/2012
- **Source:** Environmental Protection Agency
- **Telephone:** 202-564-6023
- **Last EDR Contact:** 01/28/2013
- **Next Scheduled EDR Contact:** 05/13/2013
- **Data Release Frequency:** Varies

**LIENS: Environmental Liens Listing**

A listing of property locations with environmental liens for California where DTSC is a lien holder.

- **Date of Government Version:** 12/17/2012
- **Source:** Department of Toxic Substances Control
- **Telephone:** 916-323-3400
- **Last EDR Contact:** 03/11/2013
- **Next Scheduled EDR Contact:** 06/24/2013
- **Data Release Frequency:** Varies
DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder’s office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records
RCRA NonGen / NLR: RCRA - Non Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Source: EPA
Telephone: 703-416-0223
Last EDR Contact: 03/13/2013
UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US MINES: Mines Master Index File
Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

TRIS: Toxic Chemical Release Inventory System
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

TSCA: Toxic Substances Control Act
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.
HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSPI: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

Source: EPA
Telephone: (415) 947-8000
Last EDR Contact: 03/12/2013
Next Scheduled EDR Contact: 06/24/2013
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

Last EDR Contact: 06/24/2013
Next Scheduled EDR Contact: 09/01/2008
Data Release Frequency: No Update Planned

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

BRSS: Biennial Reporting System
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

CA BOND EXP. PLAN: Bond Expenditure Plan
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

NPDES: NPDES Permits Listing
A listing of NPDES permits, including stormwater.

UIC: UIC Listing
A listing of underground control injection wells.

CORTESE: "Cortese" Hazardous Waste & Substances Sites List
The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).
### HIST CORTESE: Hazardous Waste & Substance Site List

The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

### HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

| Data Release Frequency: Quarterly | |

### Financial Assurance 2: Financial Assurance Information Listing

A listing of financial assurance information for solid waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.
2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

FEDLAND: Federal and Indian Lands

PRP: Potentially Responsible Parties

A listing of verified Potentially Responsible Parties

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.
US AIRS MINOR: Air Facility System Data
A listing of minor source facilities.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS
EDR Exclusive Records
EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, resin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas station, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.
EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Proprietary Historic Dry Cleaners - Cole

COUNTY RECORDS

ALAMEDA COUNTY:

Contaminated Sites
A listing of contaminated sites overseen by the Toxic Release Program (oil and groundwater contamination from chemical releases and spills) and the Leaking Underground Storage Tank Program (soil and ground water contamination from leaking petroleum USTs).

OTHER DATABASE(S)
Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 11/19/2012
Date Data Arrived at EDR: 11/19/2012
Date Made Active in Reports: 01/03/2013
Number of Days to Update: 45

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.
Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County: SANTA CLARA, CA
Flood Plain Panel at Target Property: 06085C - FEMA DFIRM Flood data
Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property: SAN JOSE WEST
Data Coverage: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1/2 - 1 Mile NE
Site Name: River Park Development-Lincoln Props
Site EPA ID Number: CAD981676430
Surficial Aquifer Flow Dir.: SW. THIS FLOW APPLIES TO THE "A" AQUIFER.
Measured Depth to Water: approximately 22 feet in the surficial "A" aquifer and approximately 95 feet in the underlying "B" aquifer.
Hydraulic Connection: A silty clay layer separates the "A" and "B" aquifers.
Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®
Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION
Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY
Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY
The U.S. Department of Agriculture’s (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA
Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported
Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches
Depth to Bedrock Max: > 60 inches

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

- Soil Surface Textures: No Other Soil Types
- Surficial Soil Types: No Other Soil Types
- Shallow Soil Types: No Other Soil Types
- Deeper Soil Types: No Other Soil Types

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
OTHER

Airport Landing Facilities: Private and public use landing facilities
   Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
   Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
