

Key Findings

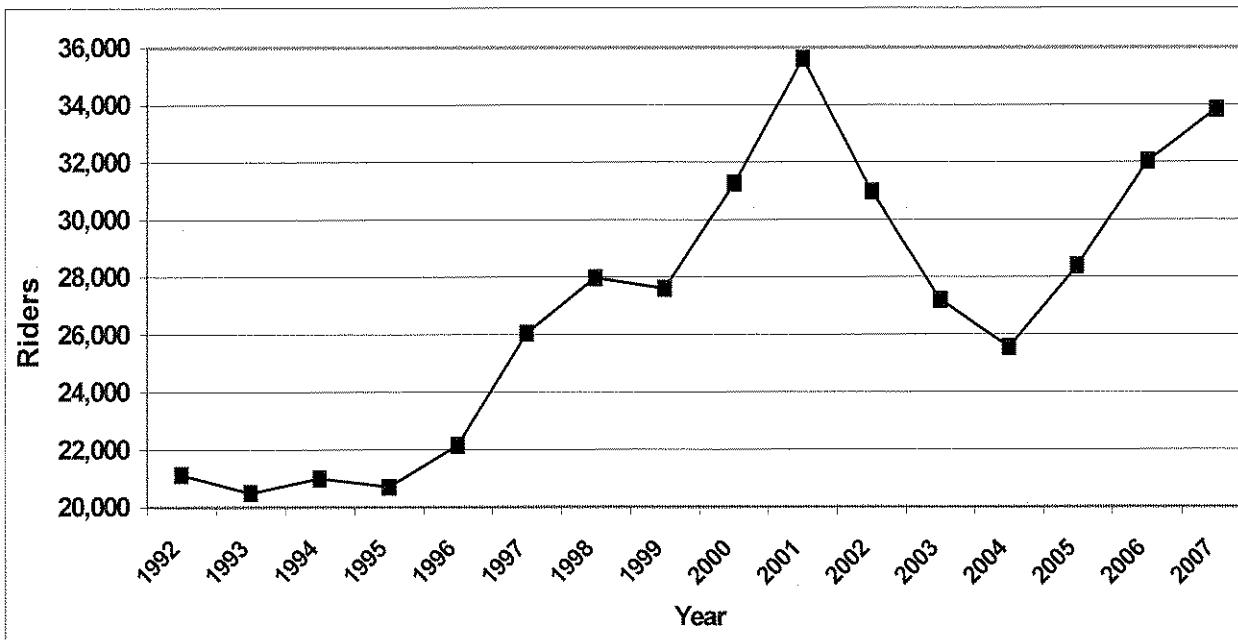

February 2007 Caltrain Annual Passenger Counts

The annual Caltrain passenger counts were conducted in February 2007. The counts have taken place in February since 1994. The February 2007 count follows the same methodology used in the past. Comparisons to one year ago (February 2006) are now in a service "steady state," since there have been no service or schedule changes in the last year. This is in marked contrast from the last two annual counts when each time there were drastic changes to Caltrain service: June 2004 saw the introduction of Baby Bullet express service, and in August 2005 Caltrain was "reinvented" with more express service. This is the third consecutive year of weekend counts, after two years (February 2003 and 2004) of discontinued weekend service during the CTX construction project.

Overall Ridership

Weekday Ridership

Caltrain average weekday ridership (AWR) has increased 5.7 percent as compared to February 2006, with a total of 33,841 boardings. The passenger count trend since 1992 is shown in the graph below. Since 1992, Caltrain AWR has increased by more than 60 percent. Caltrain hit its

highest ridership in 2001. Ridership was in a steady decline until the implementation of Baby Bullet service and the reinvention of the service. Since the summer of 2004, ridership has been steadily increasing. This year, with no added service, ridership continued to grow but at a more moderate level.

When ranked by average weekday boardings, the top 10 stations remained in the same order for both 2006 and 2007. Movement in the rankings occurred with the 12th busiest station, 22nd

Street, which swapped 13th place with California Avenue. No station moved more than one place, and there were only four of these one-place swaps involving eight stations. The results are as follows:

Stations with Baby Bullet express service are showing the most gains in ridership in terms of increased number and percent increase, but these gains are not as large as when the service was initially introduced. The greatest percent gain is Tamien at more than 19 percent, followed by Sunnyvale at nearly 12.5 percent, as shown in Table 4. Both stations began Baby Bullet service in August 2005 and are served by six Baby Bullet stops in the traditional peak-commute direction only.

The regular stations that showed the most overall numeric change since February 2006 are as follows:

Table 3

With the re-invention of Caltrain service in August 2005, weekday service to Atherton, Broadway and Paul Avenue was suspended; this has continued. Peak-hour shuttles provide a connection for passengers from Atherton to Redwood City and from Broadway to Millbrae.

Train Capacity

The February 2007 counts show that the traditional (northbound morning and southbound afternoon) peak trains and Baby Bullets continue to have the highest loads. The highest maximum loads are approximately 80 percent of capacity. Four-car Train 217 that shows as over capacity, would still be the most full train, even if a five-car consist was used. With a five-car consist Train 217 would be more than 80 percent of capacity. Its maximum load increased from 411 in 2006 to 525 in 2007. The same five trains northbound that were the fullest in 2006 are the same trains that are fullest this year. For southbound trains, four are the same. However, Train 280 is now at only 64 percent of its capacity at the maximum load point. Train 386 has taken its place and is 80 percent full and is the fullest southbound train, mostly due to the fact that it operates with only a four-car consist. The following table shows the five trains with the highest maximum loads in each direction.

The peak throughout this document is defined as all trains departing the San Francisco or San Jose Diridon stations from start of service to 9:00 AM and between 2:59 PM and 7:00 PM, exclusive. In the peak, on average, each type of train carried the following number of passengers:

Table 7: PASSENGERS PER TRAIN (peak hours)

| | Feb 2006 | Feb 2007 |
|-------------|----------|----------|
| Baby Bullet | 430 | 464 |
| Limited | 398 | 421 |
| Local | 247 | 258 |

The growth in the peak continues to exceed the overall rate of growth. Baby Bullet and Limited trains are carrying an average of 7 percent more passengers compared to last year. The low passenger loads for local trains is largely due to the fact that there are no local trains in the peak of the peak. The next table further breaks the limited trains into ones with distinct local and

express halves (labeled Express/Local) verses ones that skip stations throughout their trip (labeled Uniform Limited).

Table 8: PASSENGERS PER TRAIN BY SERVICE TYPE (peak hours)

Commute Patterns

The traditional peak direction (northbound morning and southbound evening) and the reverse peak (southbound morning and northbound evening) commute markets both showed growth from February 2006 to February 2007. The traditional peak market is showing stronger growth than the reverse market. The ratio of those traveling north in the morning to those traveling south in the morning continues to remain at approximately 60/40, as has been the case for quite some time.

The following table shows the weekday ridership broken down by direction/time of day and change since February 2006:

Table 9:

WEEKDAY PASSENGERS BY MARKET (time of day/direction) – COMPARISION TO 2006

| | 2006 Riders | 2007 Riders | Difference | Change |
|-------------------------|-------------|-------------|------------|--------|
| Traditional Peak | 15,199 | 16,387 | +1188 | +7.8% |
| Midday | 4,803 | 5,095 | +292 | +6.1% |
| Reverse Peak | 10,309 | 10,769 | +460 | +4.5% |
| Night | 1,719 | 1,590 | -129 | -7.5% |
| TOTAL | 32,031 | 33,841 | +1,811 | +5.7% |

Ridership on the commute/peak-only Gilroy extension has continued to decline. This year's count found 31 fewer passengers boarding at stations on the Gilroy extension, a decrease of 6.5 percent from 2006. Since February 2004, Gilroy ridership has decreased by 227 daily passengers, a loss of 34 percent. Service was reduced from four trips to three trips per direction in this timeframe. Some of the decrease in Gilroy ridership is attributable to major capacity improvements to Highway 101 between San Jose and Gilroy. Gilroy extension ridership has declined every year since the peak in 2001.

Bicycles

The February 2007 count showed 2,334 bike boardings. This is a 2.8 percent increase from the February 2006 number of 2,271 and is much more moderate than last year's 22 percent increase. The top five stations and trains by bicycle usage are listed below:

Weekend

Weekend service resumed in June 2004, with the implementation of the original Baby Bullet schedule, after a two-year hiatus to accommodate construction. During that time, limited substitution bus service was provided to five stations. Saturday train service was restored to the level it was before the suspension of service. Sunday service was increased 50 percent to provide hourly service. As part of the Caltrain Re-invented service changes in August 2005, weekend service was adjusted. The first trains on Saturday and Sunday in both the northbound and southbound directions were eliminated, resulting in weekend service starting one hour later. Saturday 9 p.m. departures were added at San Francisco and San Jose Diridon to provide more uniform service. Service between Tamien station and San Jose Diridon station continues to be provided by a shuttle on weekends. The service is unchanged from last year.

The weekend counts are conducted only once for each train (i.e. each train is counted only once on Saturday and once on Sunday). Unlike the weekday, weekend numbers not an average of five counts.

Weekend ridership has been mixed compared to last year. Saturday ridership has increased an impressive 25 percent from 2006. Sunday ridership has declined, but by only 6.6 percent. After two years of making a run at catching Saturday's total, ridership on Sunday is only 60 percent of Saturday's. Overall weekend ridership is up almost 11 percent, but that rate of growth is much less than last year's 34 percent increase above 2005.

Table 14: ONE YEAR RIDERSHIP COMPARISON – 2006 TO 2007

| Sunday | 7,241 | 6,765 | -476 | -6.6% |
| Total | 16,166 | 17,929 | 1,763 | 10.9% |

Weekend ridership has exceeded the 2002 levels. Now ridership on Saturday and Sunday recovered and gained on the level before the two-year weekend shut-down. Weekend numbers are summarized in the following chart from 2002 and 2007:
