

CALTRAIN MODERNIZATION PROGRAM

Foundation Installation

NIGHT TIME WORK December 2017

ANTICIPATED WORK HOURS

7:00 p.m. – 6:00 a.m.

CREWS CONDUCTING WORK IN YOUR AREA TO INSTALL FOUNDATIONS

Beginning December 16, Caltrain electrification crews will be working in your area to install overhead contact system (OCS) foundations for the Caltrain electrification project. The foundations will be installed within the Caltrain right-of-way.

Crews will be conducting the work 7 days a week between the hours of 7 p.m. and 6 a.m. The installation of foundations in Millbrae will take approximately 4 weeks. Foundations will be installed 180 feet apart and crews will move to the next location once each foundation is complete.

Main construction activities include:

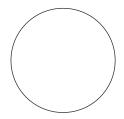

- Excavation
- · Rebar and anchor installation
- · Electrical grounding
- Concrete fill
- · Foundation Installation

We apologize for any inconvenience this may cause. The field team will work as quietly as possible, utilizing noise absorbing blankets and positioning lights away from homes. Crews will return in mid-2018 to install poles and late 2018 to install wires for the overhead contact system. Thank you for your patience and understanding as we deliver these critical benefits to our communities.

Please visit our website at www.caltrain.com/PCEPconstruction to sign-up for weekly construction updates.

We appreciate your patience during construction.

ABOUT THE PROJECT

Caltrain electrification is a key component of the Caltrain Modernization Program that will electrify the Caltrain Corridor from San Francisco's 4th and King Station to approximately the Tamien Station in San Jose and replace diesel-hauled with Electric Multiple Unit (EMU) trains. Caltrain electrification will improve Caltrain system performance, enable more frequent and/or faster train service, and reduce long-term environmental impact by reducing noise, improving regional air quality and reducing greenhouse gas emissions. Caltrain electrification is scheduled to be operational by 2022.
