

CALTRAIN ELECTRIFICATION

SR 87 LANE CLOSURE NOTICE | February 2022

UPCOMING ACTIVITIES AND LANE CLOSURE

On the evenings of February 23 and 24, Caltrain will begin performing OCS pull test work in San Jose that will require a temporary closure of the northbound shoulder and one southbound lane of State Route 87 between Curtner Avenue and W. Virginia Street to vehicle traffic.

From 11 p.m. on February 23 and 24 to 5 a.m. on February 24 and 25 there will be a temporary closure of the northbound shoulder and one southbound lane of State Route 87 between Curtner Avenue and W. Virginia Street.

Directional signs will direct vehicle traffic to adjacent southbound lanes during the closure

Lane closure maps and are provided on the reverse of this notice.

CONSTRUCTION ACTIVITIES

During the closure, crews will pull-test OCS poles along the Caltrain corridor. Crews will utilize on-track and off-track equipment that requires the temporary closure of the highway lanes.

Crews will also be working along the Caltrain corridor to install foundations outside of the closure hours noted above. Work may take place during the day and at night, with night work occurring between 10 p.m. and 5 a.m. There may also be occasional 24-hour work on weekends.

Caltrain will work with contractors to minimize night work to limit the impact to surrounding communities; however, some work must be performed at night in order to maintain regular Caltrain service. To mitigate noise and other impacts during night activities, the field team will utilize acoustical noise barrier blankets and will position lights away from residential and business areas. Caltrain has established a dedicated project hotline and email for residents concerned about these potential impacts.

PROJECT OVERVIEW

Over the last decade, Caltrain has experienced a substantial increase in ridership and anticipates further increases in ridership demand as the Bay Area's population grows. Caltrain Electrification, scheduled to be operational by 2024, will electrify and upgrade the performance, operating efficiency, capacity, safety, and reliability of Caltrain's commuter rail service.

Caltrain electrification is a key component of the Caltrain Modernization Program and consists of replacing diesel-hauled with an electric train system for services between Fourth and King Street Station in San Francisco and the Tamien Station in San Jose. The project will include the installation of new electrical infrastructure and the purchase of electric trains.

CONTACT INFORMATION

Caltrain has established a project information line and project e-mail for Caltrain Electrification to record and respond to questions and comments from residents and stakeholders.

The project information line can be reached at **650.399.9659** or toll free at **800.660.4287**.

The project e-mail is calmod@caltrain.com
