

# Caltrain. *Electric Train Activity Book*

# Electric Train Journey Maze

Help the new electric train make its way from the factory in Salt Lake City to its new home at Caltrain!

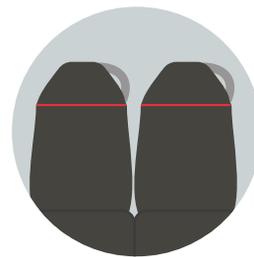

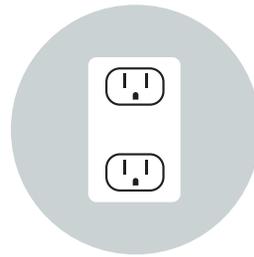

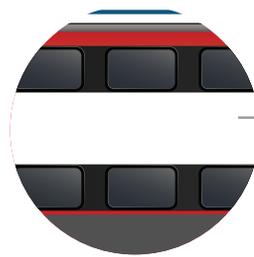

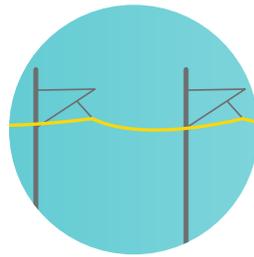

# Electric Train Matching Game

**Welcome aboard Caltrain's first electric train!** The state-of-the-art trains offer new and exciting features that will make each train journey more comfortable and fun for the entire family.

**Match each image to the word below and look for each item on and near the new trains!**

**Train Windows**

**Platform**

**Baby changing table**

**Outlet under seats**

**Overhead electrical wires**

**More comfy seating**

**Screens with helpful tips**

The electric trains are **not as loud** as the old trains. This helps the people, birds and other critters living near the train stay healthy.

Caltrain's new trains will run on electricity produced from the **overhead wires**. They carry **25,000 volts** of electricity!

The new electric trains are **better for the planet**. The **overhead electric wires improve air quality** by eliminating the need for diesel engines.

# Electric Train Word Scramble

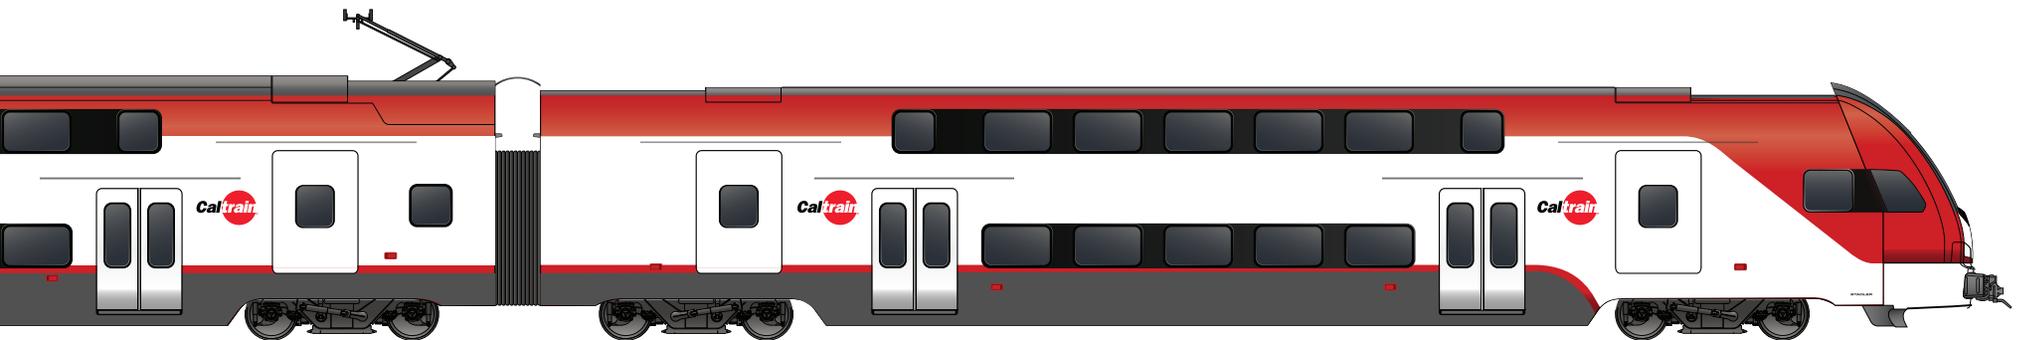

Now that you have spotted some of the features of the new electric trains, use what you've learned to unscramble the words below!

The **overhead** \_\_\_\_\_ carry over 25,000 volts of electricity.  
EWRSI

The **new electric trains** are better for the \_\_\_\_\_ .  
TPNEAL

The new \_\_\_\_\_ are not as loud **as the old trains**.  
SNITAR

The new trains have **features** that will make each journey more comfortable and \_\_\_\_\_.

# Bring the New Electric Train to Life!

Caltrain's first electric train is on its way, helping make a greener, cleaner future for riders. There are many parts of an electric train system that help it run safely and smoothly.

*Help bring the new electric train system to life by coloring the scene below. Learn more about the different parts of the electric train system on the next page!*

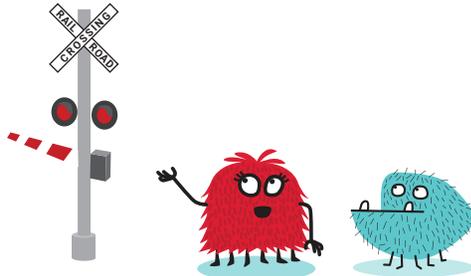

## 1 Electric Train

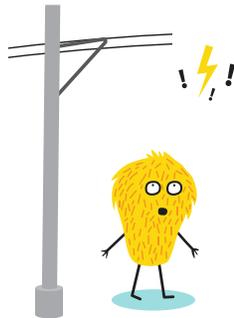

Caltrain's new electric trains get people to where they want to go faster and with cleaner energy for a better environment. The trains are also much quieter so be sure to pay attention when you are at the station or railroad crossing.

## 2 Crossing Gate

Keep an eye out for the crossing gate when you're walking or biking near train tracks. These gates help you know when it is safe to cross. Always wait for the gate to fully rise before crossing.

## 3 Electrical Wires

Attached to the poles are electric wires that carry electricity to the new trains. Stay aware and stay safe around them — never try to touch them with things like ladders, antennas, balloons, and most importantly, yourself!
