1.0 BACKGROUND

Over the last decade, Caltrain has experienced a substantial increase in ridership and anticipates further increases in ridership demand as the San Francisco Bay Area's population grows. The Caltrain Modernization (CalMod) Program, scheduled to be implemented by 2022, will electrify and upgrade the performance, operating efficiency, capacity, safety, and reliability of Caltrain's commuter rail service.

The PCEP is a key component of the CalMod Program and consists of converting Caltrain from diesel-hauled to Electric Multiple Unit (EMU) trains for service between the San Francisco Station (at the intersection of Fourth and King Streets in San Francisco) and the Tamien Station in San Jose. Caltrain will continue Gilroy service and support existing tenants.

An electrified Caltrain will better address Peninsula commuters' vision of environmentally friendly, fast and reliable service. Electrification will modernize Caltrain and make it possible to increase service while offering several advantages in comparison with existing diesel power use, including:

- Improved Train Performance, Increased Ridership Capacity and Increased Service: Electrified trains can accelerate and decelerate more quickly than dieselpowered trains, allowing Caltrain to run more efficiently. In addition, because of their performance advantages, electrified trains will enable more frequent and/or faster train service to more riders.
- Increased Revenue and Reduced Fuel Cost: An electrified Caltrain will increase ridership and fare revenues while decreasing fuel costs.
- Reduced Engine Noise Emanating from Trains: Noise from electrified train
 engines is measurably less than noise from diesel train engines. Train horns will
 continue to be required at grade crossings, adhering to current safety regulations.
- Improved Regional Air Quality and Reduced Greenhouse Gas Emissions:
 Electrified trains will produce substantially less corridor air pollution compared with
 diesel trains even when the indirect emissions from electrical power generation are
 included. Increased ridership will reduce automobile usage, resulting in additional
 air quality benefits. In addition, the reduction of greenhouse gas emissions will
 improve our regional air quality, and will also help meet the state's emission
 reduction goals.

2.0 EXECUTIVE SUMMARY

The Monthly Progress Report is intended to provide an overview of the PCEP and provide funding partners, stakeholders, and the public an overall update on the progress of the project. This document provides information on the scope, cost, funding, schedule, and project implementation. Work along the Caltrain Electrification Corridor has been divided into four work segments and respective work areas (WA) as shown in Figure 2-1. PCEP activities are described and summarized by segments and work areas.

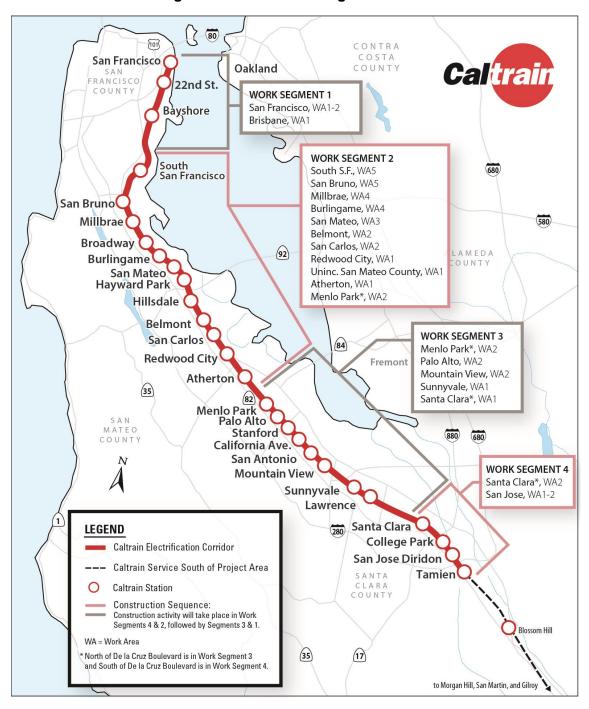

Figure 2-1 PCEP Work Segments

In November, a transformer was installed at Paralleling Station (PS) PS-5 along with the gantry and cables. PG&E began work at the Traction Power Substation (TPS) TPS-2 Interconnection. Other construction activities this month included potholing, foundation, pole, and cable installation, ductbank installation at PS-2, and fences, walls, and enclosures at paralleling stations and traction power substations.

Stadler's Trainset 1 type testing began in November, but then was delayed again due to staff contracting Coronavirus Disease 2019 (COVID-19) and associated quarantining requirements. At this time 61 car shells have been shipped from Stadler Switzerland, with 46 onsite in Stadler's Salt Lake City facility. The carshell that was returned to Altenrhein due to shipping damage has now been repaired and is being prepped to ship back to Salt Lake City.

Construction progress at the Centralized Equipment Maintenance and Operations Facility (CEMOF) included installation of a partial storm drain line, removal of slabs and backfilling walls, grouting steel frames and removal of shoring, and conduit installation.

2.1. Monthly Dashboards

Dashboard progress charts are included below to summarize construction progress.

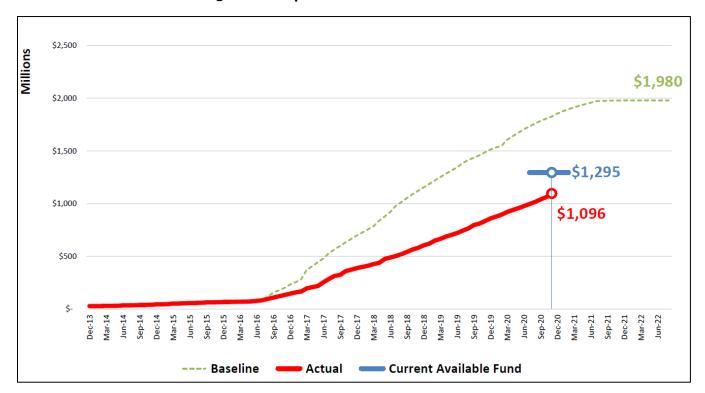

Figure 2-2 Expenditure – Planned vs. Actual

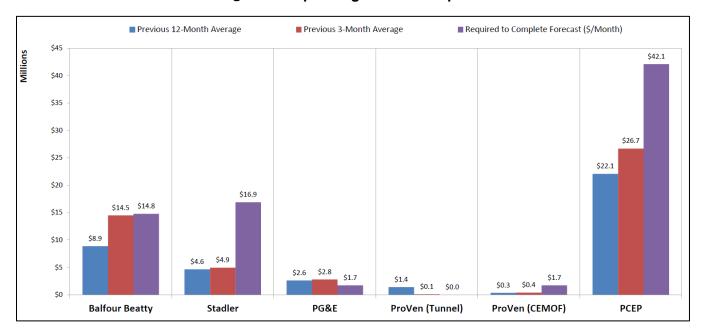

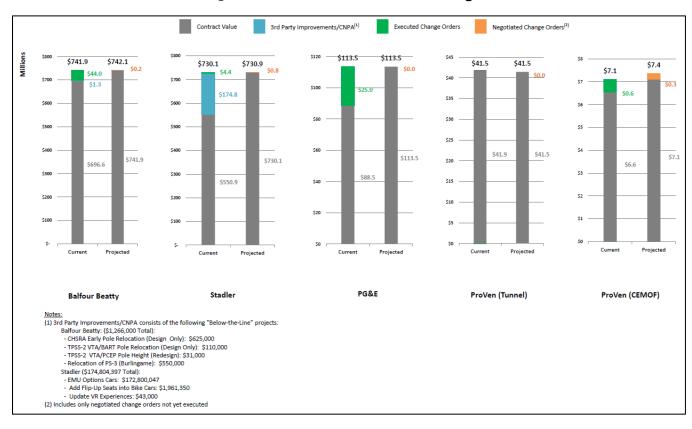

Figure 2-3 Spending Rate vs. Required

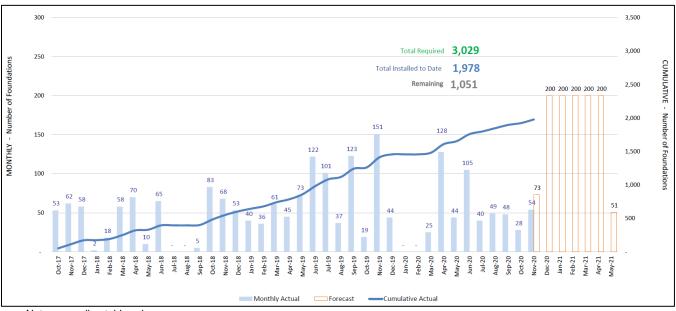

Figure 2-5 OCS Foundation Production

Notes regarding tables above:

BBII is now reporting a delay in the completion date for the OCS foundations from March 31, 2021 to May 7, 2021. The monthly forecast will be revised at the end of ongoing OCS foundation workshops, which are held to determine the level of effort necessary for each of the activities prior to foundation installation. The delay to the OCS foundation completion date did not change the substantial completion date of the BBII contract.

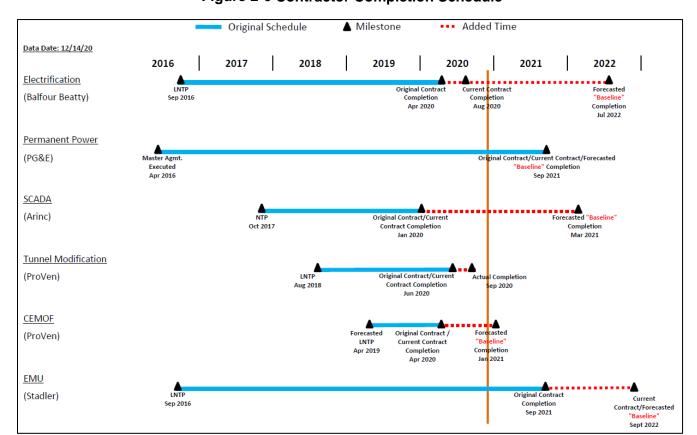

Figure 2-6 Contractor Completion Schedule

2.2. Funding Partners Participation in PCEP

The PCEP has a series of weekly, biweekly, monthly and quarterly meetings to coordinate all aspects of the program. The meetings are attended by project staff with participation by our funding partners in accordance with the Funding Partners Oversight Protocol. A summary of funding partner meetings and invitees can be found in Appendix B.

This section of the report provides a summary of the discussions and decisions made at the meetings and a list of funding partners who attended the meetings.

Electrification – Weekly Discipline-Specific Meetings

Purpose: To replace the previous weekly Engineering Meeting with three discipline-specific meetings for the three major categories of work under the Electrification Design Build (DB) contract: Overhead Contact System (OCS) Foundation, Traction Power Facilities (TPF), and Signals. Each meeting will focus on the status, resolution and tracking of Balfour Beatty Infrastructure, Inc. (BBII) and Electrification design- and construction-related issues.

Activity this Month

OCS Foundation Meeting

Funding Partners: None

- Review of upcoming foundation design and installation schedule
- Discussion of open issues impacting foundations design and installation
- Discussion of outstanding Requests for Information (RFI)
- Review of foundation designs that potentially impact Right of Way (ROW)
- Review of outstanding Field Orders or Change Notices required for work to continue

TPF Meeting

Funding Partners: None

- Review of outstanding items as they relate to the design and construction of the PG&E Interconnection
- Review of PG&E Interconnection schedule
- Discuss progress and next steps for the Single-Phase Study
- Discuss outstanding comments on the interconnection agreement
- Review and resolve open issues on the construction and design of the TPFs (paralleling stations, traction power substations, switching station)

PCEP Delivery Coordination Meeting – Bi-Weekly

Purpose: To facilitate high-level coordination and information sharing between crossfunctional groups regarding the status of the work for which they are responsible.

Activity this Month

Funding Partners: SFCTA: Luis Zurinaga; MTC: Trish Stoops; VTA: Dennis Ratcliffe and Franklin Wong

The Federal Transit Administration (FTA)/Project Management Oversight Consultant (PMOC) Risk Refresh Workshops have been scheduled for December. The PCEP presentation to the San Francisco County Transportation Authority (SFCTA) Board occurred on November 17. The Bayshore appraisal and offer will be presented at the December Board for approval. The closing date for the Scissor Lift Work Platforms Request for Quotes (RFC) was extended for two weeks and closed on November 20. A single bid was received and staff is in the process of performing a price analysis. In Systems Integration, one system for the Railroad Operation Control System (ROCS) was successfully placed in service and the Back-up Central Control Facility (BCCF) was tested as a primary control center. In EMU testing and manufacturing, the static testing for Trainset 1 has been completed and testing for Trainset 2 is ongoing. The dynamic two-passenger table testing was conducted on November 24 and staff will be receiving the data shortly. One carshell that was returned to Altenrhein due to shipping damage has now been repaired and will be shipped to Salt Lake City. Trainset 1 delivery to Pueblo will occur in January and Trainset 3 delivery to Caltrain will occur in June. The Federal Railroad Administration (FRA) has rescinded the request for one bike barrier because there is no emergency window located at that location. Stadler will resubmit the design drawings and a Request for Change (RFC) for the FRA-requested change. Pit work is ongoing at the Centralized Equipment Maintenance and Operations Facility (CEMOF) and expected to be completed by the end of the year. Balfour Beatty Infrastructure, Inc. (BBII) is now able to perform foundation work. In Design Build activities, on-track foundations continue in Segment (S) S3 and S4 and expected to be complete by December 5. Off-track foundations in S1 will resume after completion of S3 and S4. The permit for Marchese has been received and work has been scheduled for November 16.

Systems Integration Meeting - Bi-Weekly

Purpose: To discuss and resolve issues with inter-system interfaces and to identify and assign Action Item Owners for interface points that have yet to be addressed.

Activity this Month

Funding Partners: Trish Stoops – Metropolitan Transportation Commission

Bi-weekly PCEP System Integration meetings are held to monitor and determine appropriate resolution for systems integration issues. The Systems Integration Lead also maintains contact with the EMU procurement team. The Traction Power SCADA team also holds bi-weekly status meetings. Coordination with the EMU procurement, Positive Train Control (PTC) and Caltrain Capital Project managers responsible for other capital projects on the corridor is ongoing. There is coordination with the Tunnel Modification Project, PG&E construction of the Interconnection to TPS-2, and the CEMOF upgrades as well. The Systems Integration meeting has been re-focused to track and coordinate issues between PCEP and the overall agency (JPB). This was done to avoid task overlap with the JPB Rail Activation Committee. A smaller "breakout" group is meeting to determine and track what testing and with which resources will need to be coordinated among the various contracts and suppliers. This "Testing and

Commissioning Meeting" is the primary interface to the PCEP Design-Build Team at this time. Work to define dependencies for completion of Segment 4 (Intermediate Milestone #1) is ongoing with the Testing & Commissioning discussion. Work continues to develop a schedule fragnet for the achievement of Intermediate Milestone #1. This group will report back to the System Integration meeting group with their findings.

Master Program Schedule (MPS) Meeting – Monthly

Purpose: To review the status of the MPS and discuss the status of major milestones, critical and near-critical paths, upcoming Board review items, and progress with the contracts, among others.

Activity this Month

Funding Partners: Metropolitan Transportation Commission (MTC): Trish Stoops; VTA: Manolo Gonzalez-Estay; SFCTA: Luis Zurinaga; CHSRA: Wai-on Siu

The program critical path was revised in November due to delays on the EMU contract. Stadler continues to progress in EMU Manufacturing effort below baseline productivity levels due to COVID-19. The incorporation of this delay has resulted in a two-month delay to the 14th Trainset acceptance date and a shift of the program critical path from Electrification to EMU Manufacturing. This remains a fluid situation as the effect of COVID-19 on Stadler during the upcoming winter months remains unknown. These delays continue to be examined for potential impact on Revenue Service Date (RSD).

The forecast completion date for Stadler is now September 9th, 2022. This impact has resulted in a drawdown of the remaining 26 days schedule contingency. The program no longer has any schedule contingency.

BBII forecasted substantial completion date remains July 27, 2022 but will likely change based on recent BBII schedule updates for the remaining signal system modifications. JPB is working with BBII to improve progress on both signal system which lags behind baseline productivity level, and traction power facilities which continues to progress at a slow rate.

Risk Assessment Meeting – Monthly

Purpose: To identify risks and corresponding mitigation measures. For each risk on the risk register, mitigation measures have been identified and are being implemented. Progress in mitigating these risks is confirmed at the ongoing risk monitoring and monthly risk assessment meetings.

Activity this Month

Due to the absence of issues requiring review, no meeting was held in November.

Change Management Board (CMB) - Monthly

Purpose: To review, evaluate and authorize proposed changes to PCEP over \$200,000. The CMB discusses major topics including potential changes to PCEP contracts, contingency usage, track access delays and Differing Site Conditions (DSC) field order updates. Potential contract changes will follow the PCEP Change Order Procedure. Once approved changes are executed, they will be reported in the Change Management section (Section 9) of this report.

Activity this Month

The CMB meeting occurred on November 18.

Funding Partners: CHSRA: Boris Lipkin; VTA: Dennis Radcliffe; SFCTA: Luis Zurinaga; SMCTA: Joe Hurley; MTC: Trish Stoops and Kenneth Folan

BBII Contract

One change was approved.

CEMOF Contract

No changes were identified for consideration.

Stadler Contract

No changes were identified for consideration.

SCADA Contract

One change was approved.

Tunnel Modification Contract

No changes were identified for consideration.

Amtrak Contract

No changes were identified for consideration.

Other

No changes were identified for consideration.

2.3. Schedule

The program critical path was revised in November due to delays on the EMU contract. Stadler continues to progress in EMU Manufacturing effort below baseline productivity levels due to COVID-19. The incorporation of this delay has resulted in a two-month delay to the 14th Trainset acceptance date and a shift of the program critical path from Electrification to EMU Manufacturing. This remains a fluid situation as the effect of COVID-19 on Stadler during the upcoming winter months remains unknown. These delays continue to be examined for potential impact on Revenue Service Date (RSD).

The forecast completion date for Stadler is now September 9th, 2022. This impact has resulted in a drawdown of the remaining 26 days schedule contingency. The program no longer has any schedule contingency.

BBII forecasted substantial completion date remains July 27, 2022 but will likely change based on recent BBII schedule updates for the remaining signal system modifications. JPB is working with BBII to improve progress on both signal system which lags behind baseline productivity level, and traction power facilities which continues to progress at a slow rate.

Table 2-1 indicates major milestone dates for the MPS.

Table 2-1 Schedule Status

Milestones	Program Plan	Progress Schedule (November 2020) ¹
Arrival of First Vehicle in Pueblo, CO	N/A	01/26/20202
Arrival of First Vehicle at JPB	N/A	07/08/20212
Segment 4 Completion	11/21/2019	06/14/2021
 Interconnection from PG&E Substation to Traction Power Substation (TPS) 	N/A	01/29/2021
PG&E Provides Permanent Power	09/09/2021	09/09/2021
Electrification Substantial Completion	08/10/2020	07/27/2022
Acceptance of 14th Trainset	08/20/2021	09/09/20222
RSD (w/o Risk Contingency)	12/09/2021	09/09/20223
FFGA RSD	08/22/2022	08/22/2022

Dates may shift slightly as the update of this month's Progress Schedule is still in process.
 These dates are expected to be delayed due to COVID-19 impacts on Stadler's manufacturing facility in Salt Lake City.

^{3.} See "Notable Variances" in Section 7 for explanation on date shift.

2.4. Budget

A summary of the overall budget and expenditure status for the PCEP is provided in Table 2-2 below.

Table 2-2 Budget and Expenditure Status

Description of Work	Budget (A)	Current Budget (B) ¹	Cost This Month (C) ²	Cost To Date (D)³	Estimate To Complete (E)	Estimate At Completion (F) = (D) + (E)
Electrification Subtotal	\$1,316,125,208	\$1,316,125,208	\$22,768,303	\$838,174,470	\$477,950,738	\$1,316,125,208
EMU Subtotal	\$664,127,325	\$664,127,325	\$11,176,650	\$257,844,485	\$406,282,840	\$664,127,325
PCEP TOTAL	\$1,980,252,533	\$1,980,252,533	\$33,944,953	\$1,096,018,955	\$884,233,578	\$1,980,252,533

Notes regarding tables above:

2.5. Board Actions

Change orders for CEMOF fire sprinkler waterline and boosted waterline

Future anticipated board actions include:

Change orders as needed

2.6. Government and Community Affairs

There were three outreach events this month.

^{1.} Column B "Current Budget" includes executed change orders and awarded contracts.

^{2.} Column C "Cost This Month" represents the cost of work performed this month.

^{3.} Column D "Cost To Date" includes actuals (amount paid) and accruals (amount of work performed) to date.

3.0 ELECTRIFICATION - INFRASTRUCTURE

This section reports on the progress of the Electrification, SCADA, and Tunnel Modification components. A brief description on each of the components is provided below.

3.1. Electrification

The Electrification component of the PCEP includes installation of 138 miles of wire and overhead catenary system (OCS) for the distribution of electrical power to the EMUs. The OCS will be powered from a 25 kilovolt (kV), 60-Hertz, single phase, alternating current supply system consisting of two traction power substations (TPS), one switching station (SWS), and seven paralleling stations (PS). Electrification infrastructure will be constructed using a DB delivery method.

Activity This Month

- Continued to install on-track in Segments 3 and 4 as conflicts are resolved.
- Continue to install off-track foundations in Segment 1.
- Continued installation of OCS poles, cantilevers, and wires in Segment 3 following the foundations.
- Continued regulation of OCS wires (sagging the wires) in Segment 3.
- Continued installation of shunt wires in Segment 3.
- Potholed at proposed OCS locations and utility locations in all Segments in advance of foundation installation. BBII and PCEP also continued to resolve conflicts found during the potholing process, such as loose concrete, asphalt, and other debris, and continued designing solutions for those conflicts that cannot be avoided. The conflicts must be resolved before installation of foundations at those locations.
- Relocated signal cables and remove abandoned facilities found in conflict with planned OCS foundations as conflicts were identified.
- Continued installation of gantry and cable installation, and set transformer at PS-5.
- Continued ductbank installation at PS-2.
- Continued 25 kV enclosure installation at PS-4.
- Continued CMU wall construction at PS-6.
- Continued fence installation at PS-7.
- Continued CMU wall construction at TPS-1.
- Continue to address PG&E punch list items at TPS-2.
- Continued to install signal ductbank, conduits, and cables in Segment 2.
- Continued to install signal ductbank, conduits, and cables in Segment 4.
- Continued to plan for the second signal cutover in Segment 4.
- Continued conduit and cable installation at Control Point (CP) Delmas and Mack.
- Continued cable termination at CP Delmas and CP Mack.

- Performed pre-testing at multiple sites in Segment 4.
- Installed fiber optic cable in Segment 4.
- Continued drilling of rails for impedance bond connections in Segments 1, 2, 3, and 4 at various control points and crossings.
- Install overhead bridge attachments at various locations in Segment 3.
- Progressed the OCS design with BBII in all segments, which included submittal and review of Design Change Notices for revised foundation locations.
- Continued Right of Way acquisition process for off-track foundation installation in Segment 1.
- Coordinated design review with local jurisdictions for the OCS, traction power facilities, and bridge attachments design, including responses to comments from jurisdictions.
- Continued to review and coordinate signal and communication design submittals with BBII.
- Continued internal discussions about design, installation and testing of signal and communications modifications to the Caltrain system and schedule for cutover plans.
- Continued discussions with VTA on Right of Way acquisition and access for construction of TPS-2 interconnection.
- Worked with BBII through Site Specific Work Plans (SSWP) for upcoming field work.
- Continued model validation for the single phase study.
- PG&E continued work at East Grand and FMC substations.
- PG&E began TPS-2 Interconnection work.

A summary of the work progress by segment is provided in Table 3-1 below.

Table 3-1 Work Progress by Segment

	Foundations			;	Poles		
Segment	Work Area	Requiredabc	Completed this Month	Completed to Date ^e	Requiredab	Completed this Month	Completed to Datede
	Tunnels	32	0	32	32	0	32
1	Α	309	0	0	259	0	0
	В	237	5	53	177	0	0
	5	236	0	209	209	0	160
	4	314	0	238	254	0	190
2	3	176	0	128	141	7	43
	2	247	0	78	205	0	60
	1	207	0	79	154	0	33
3	2	510	6	509	441	8	428
3	1	390	16	390	310	6	286
	Α	241	24	241	177	2	128
4	В	128	3	116	123	0	87
	CEMOF	96	0	0	81	0	0
Total		3,123	54	2,073	2,563	23	1,447

Note:

- Continue off-track foundation installation in Segment 1.
- Complete foundation installation in Segments 3 and 4.
- Continue resolution of foundation conflicts.
- Continue to install protective steel plates for protection of utilities during foundation installation.
- Continue to install OCS poles and assemblies in all Segments where available.
- Continue wire installation and regulation in Segments 3 and 4.
- Continue shunt wire installation in Segment 2.
- Continue work with BBII on field investigation activities and designs, which will
 include the progression of the OCS, traction power, bonding and grounding, signal
 systems, and other civil infrastructure such as overhead bridge protections.
- Pothole and clear obstructions at proposed OCS locations.
- Continue construction at TPS-1.
- Continue construction at PS-7, PS-5, PS-4, PS-6, PS-2, and the Switching Station.
- Continue to install conduit and foundations for signal and wayside power cubicle (WPC) units in Segment 4 and Segment 2.
- Continue cable termination at signal locations in Segment 4.

a. Foundations required do not match poles required as guy foundations are needed in some locations for extra support.

b. Reported number of required poles and foundations fluctuate due to Design changes.

Update: To-date, 30 foundations have been installed by the South San Francisco in S2WA5 and 65 have been installed by the 25th Ave projects in S2WA3.

d. Poles installed in S3WA1 and S3WA2 were unreported in October.

e. One pole reported in S4WAB should have been reported in SAWAA in October's report.

- Continue to install impedance bond connections.
- Continue to install bridge attachments.
- Continue to coordinate with stakeholders on the consistent warning time solution and advance location-specific design.
- Continue to progress location-specific design for grade crossing system.
- Continue planning process for signal cutovers.
- Review BBII work plans for upcoming construction activities.
- Coordinate with PG&E on final design and construction for PG&E infrastructure.
- Coordinate with local jurisdictions to review designs.
- Continue tree pruning and removals.
- Continue progress on Single Phase Study.

3.2. Supervisory Control and Data Acquisition

SCADA is a system that monitors and controls field devices for electrification, including traction power substations (TPS), wayside power cubicles (WPC), and the OCS. SCADA will be integrated with the base operating system for Caltrain Operations and Control, which is the Rail Operations Center System (ROCS). A separate control console will be established for the Power Director.

Activity This Month

- Submitted Monthly Progress Report.
- Quality Reviews in progress for SCADA Operations User Manual.
- Completed work on Training Plan.
- Continued reviewing updated points listing received from BBII.
- Continued work on the Training Manual.

- Prepare and deliver the Monthly Report and the Monthly Schedule Update.
- Attend project status meetings (virtually).
- Complete any revisions for Operations User Manual due to QC checks.
- Complete revisions for Training Manual.
- Complete reviewing updated points listing from BBII.
- Begin work on Pre-FAT changes.
- Update schedule to reflect change order approved in November 2020.

3.3. Tunnel Modification

Tunnel modifications will be required on the four tunnels located in San Francisco. This effort is needed to accommodate the required clearance for the OCS to support electrification of the corridor. Outside of the PCEP scope, Caltrain Engineering has requested the PCEP team to manage completion of design and construction for the Tunnel 1 and Tunnel 4 Drainage and Track Rehabilitation Project. The Tunnel Drainage and Track Rehabilitation Project is funded separately from PCEP.

Activity This Month

- Letters, submittals, and Requests for Information closeout.
- Change Order reconciliation.
- Finished the signage installation.

Activity Next Month

- Review and respond to letters.
- Contractors to provide their punch list items.
- PMI to work and correct all punch list items.

3.4. Interconnection Construction

The PCEP will require a 115-kV interconnection to supply power from the PG&E substations to the Caltrain substations in San Jose and South San Francisco. Construction of the interconnections will be performed by PG&E under an amendment to Supplemental Agreement No. 2.

Activity This Month

- FMC TPS-2:
 - Engineering and Staging completed.
 - PGE/TRC completed the foundations for all H frames and TSPs.
- EGS TPS-1:
 - Design on hold until approved the new design scope option for overhead or underground.

- FMC TPS-2:
 - Erect TSP-1 at VTA site; install temporary netting poles and netting; string temporary netting wire and main and redundant fiber.
 - Receive TSPs.
 - Work toward approving the VTA license.
 - Install H-frames at the TPS-2 site.

- EGS TPS-1:
 - Continue the coordination for the TSP pole design with South San Francisco team and PGE for the redesign of the parking lot.
 - Continue the coordination for the new design scope at the TPS-1 site.

4.0 ELECTRIC MULTIPLE UNITS

This section reports on the progress of the Electric Multiple Units (EMU) procurement and the Centralized Equipment Maintenance and Operations Facility (CEMOF) modifications.

4.1. Electric Multiple Units

The procurement of EMUs, or trainsets, from Stadler consists of a Base Order of 96 railcars, plus an Option Order of an additional 37 railcars, for a total of 133 railcars. The cars from these two orders will be combined and delivered as 19 seven-car Trainsets. The Base Order is funded from PCEP, and Option Order funded by a Transit and Intercity Rail Capital Program (TIRCP) grant. One more Option for additional cars is available.

Activity This Month

- COVID-19 related actions continued for the ninth month causing mixed disruptions to Stadler's activities:
 - Stadler's manufacturing facilities in Switzerland supporting the Caltrain Project have returned to normal levels of activity.
 - Stadler's manufacturing facility in Salt Lake City has reverted back to two
 production shifts in order to limit the number of workers per car. This is due
 to the October 2020 outbreak of COVID-19 at that facility.
 - The Switzerland-based manufacturing of car shells and trucks frames is on schedule.
 - Salt Lake City-based manufacturing is delayed due to previously incurred and ongoing person-power limitations and sub-supplier parts shortages.
 - Stadler has submitted a request for an 'excusable delay' due to COVID-19. The extent of the continuing delay is being evaluated. Currently, shipping the first trainset to Pueblo, Colorado for testing has been delayed almost six months to February 2021, and the first trainset to be delivered to Caltrain delayed 3.5 months to the end of June 2021.
 - Salt Lake City-based 'Type Testing' of Trainset No. 1 is progressing slowly due to COVID-19 travel restrictions. Workarounds, including Stadler obtaining emergency visas, have allowed progress in this area. Type testing began in mid-November.
 - Type testing was delayed at the end of November due to members of the test team quarantining at home per Stadler's coronavirus contact tracing protocol. Two members tested positive and are completing their quarantine while the others tested negative and were able to return to work.
 - Stadler's supply chain has been disrupted by two supplier bankruptcies.
 This will delay delivery of trainsets. The extent of the delay is being evaluated by Stadler.
- Final Design Reviews remain to be completed for three systems. These software-based systems include 'Train Control,' 'Monitoring and Diagnostics,' and 'PTC.' For train control and MDS, completion is delayed to February 2021 and must be performed prior to the commencement of Pueblo Type Testing. For PTC, completion is anticipated in mid-2021.

- First Article Inspections (FAI) continue to have their paperwork formalized and closed out.
- 61 car shells have been shipped from Stadler Switzerland, with 46 onsite in Stadler's Salt Lake City facility (eight in transit and one returned for minor repair).
- Quality Assurance audits of USA-based sub-suppliers were halted in mid-March due to COVID-19 travel restriction. Audits will commence when sub-suppliers reopen and travel restrictions are lifted.
- Stadler's trainset delivery and testing schedule on Caltrain property has been rebaselined.

Activity Next Month

- Continue to close out system level FDRs and FAIs.
- Continue to support Caltrain/PCEP system integration and rail startup activation activities.
- Support Train 1 type testing.

4.2. Centralized Equipment Maintenance and Operations Facility Modifications

The CEMOF Modifications Project will provide work areas to perform maintenance on new EMUs.

Activity This Month

- Boosted water line work.
- Install partial Storm Drain Line A.
- Remove and backfill approach slab area.
- Backfill walls at south pit.
- Cure, strip formwork, sack & patch and waterproof north pit walls.
- Install backfill at north pit.
- Grout steel frames and remove shoring at Component Test Room.
- Aerial cable conduit installation at the Parts Storage Warehouse (PSW).
- Partial installation of racks/furnishings in PSW.
- Office installation within the PSW.

- Install remaining sheet piles.
- Excavate remaining portion of south pit.
- Pour walls for the center section of the south pit.
- Remove struts and walers at the north pit, backfill remainder of shoring and remove sheet pile shoring.
- Patch CMU Wall and install CMU blocks, re-routed conduit, and metal stud framing at Component Test Room.
- Install remaining fire sprinkler work at Parts Storage Warehouse.

5.0 SAFETY

Safety and Security requirements and plans are necessary to comply with applicable laws and regulations related to safety, security, and emergency response activities. Safety staff coordinates with contractors to review and plan the implementation of contract program safety requirements. Safety project coordination meetings continue to be conducted on a monthly basis to promote a clear understanding of project safety requirements as defined in contract provisions and program safety documents.

Activity This Month

- Project staff provided input and continued its participation in the BBII contractor workforce safety meetings. Project incidents continue to be reviewed with project staff to reinforce the application of recommended safety mitigation measures.
- Conducted 2020 monthly employee injury reviews for BBII and its subcontractors.
- Continued to provide input and oversight of the contractor SSWP safety provisions and ongoing safety construction oversight and inspections.
- Conducted the monthly project Safety and Security Certification and Fire/Life Safety Meetings.
- Participated with internal stakeholders in Rail Activation Committee meetings.
- Investigated project incident occurrences and worked with the contractor representatives to identify incident root causes and develop and implement safety and security mitigation measures.
- Reviewed the status and next steps needed to support compliance to the FTA Oversight Procedure 54 (Readiness for Service) project safety and security requirements.
- Conducted ongoing safety inspections of contractor field activities and performed pre-work site hazards assessment walks with BBII and subcontractor staff.
- Performed hi-rail vehicle safety inspections of contractor on-track equipment.
- Participated in weekly project coordination meetings with the contractor to review open issues and recommended action items.
- Continued to coordinate with JPB Safety and the project contractors with the application of mitigation measures in response to the evolving COVID-19 virus.
- Updated the Safety and Security Management Plan (SSMP) to coincide with the project testing and commissioning phase.

- Monthly virtual safety communication meetings continue to be scheduled for the Project Safety and Security Certification Committee, Fire/Life Safety Committee, Rail Activation Committee, and other project-related contractor and JPB safety meetings to discuss safety priorities.
- Finalize safety and security certification documentation requirements in coordination with ongoing project testing and commissioning activities.
- Continue focus on performing site safety inspections on the OCS foundations, pole installations, potholing, and CEMOF work activities to assess safety work practices and identify additional opportunities for improvement. Conduct contractor equipment inspections as needed.

Peninsula Corridor Electrification Project

Monthly Progress Report

- Reinforce the ongoing application of recommended mitigation measures in response to the evolving COVID-19 virus.
- Investigate project incident occurrences as needed and work with the contractor representatives to identify incident root causes and develop and implement safety and security mitigation measures.

6.0 QUALITY ASSURANCE

The Quality Assurance (QA) staff performs technical reviews for planning, implementing, evaluating, and maintaining an effective program to verify that all equipment, structures, components, systems, and facilities are designed, procured, constructed, installed, and maintained in accordance with established criteria and applicable codes and standards throughout the design, construction, startup and commissioning of the PCEP.

Activity This Month

- Staff meetings with BBII QA/Quality Control (QC) management representatives continue weekly.
- Continued review of BBII-generated Nonconformance Reports (NCR) and Construction Discrepancy Reports for proper discrepancy condition, cause, disposition, corrective and preventive action and verification of closure.
- Continued review and approval of Design Variance Requests for BBII and PGH Wong for QA/QC and inspection issues/concerns.
- Continued review of BBII QC Inspectors Daily Reports, Construction QC Reports and Surveillance Reports for work scope, performance of required duties, adequacy, non-conformances, test/inspection results, follow-up on unresolved issues, and preciseness.
- Continued review of BBII Material Receipt Reports, Certificates of Conformance, Certified Tests Reports, and Certificates of Analysis to ensure delivered project materials conform to specifications, and that contractually required quality and test support documents are adequate and reflect concise conditions per the purchase order requirements.
- Continued regularly scheduled design reviews and surveillances on project design packages.
- Conducted a second shift bridge barriers testing audit.

Table 6-1 below provides details on the status of audits performed through the reporting period.

Table 6-1 Quality Assurance Audit Summary

Quality Assurance Activity	This Reporting Period	Total to Date				
Audits Conducted	1	128				
Audit Findings						
Audit Findings Issued	0	79				
Audit Findings Open	0	0				
Audit Findings Closed	0	79				
Non-Conformances						
Non-Conformances Issued	1	13				
Non-Conformances Open	1	4				
Non-Conformances Closed	0	9				

- Conduct 'As-Built' documentation audit.
- Conduct a 'shadow audit' of BBII inspection of the entire day shift work activities.

7.0 SCHEDULE

The program critical path was revised in November due to delays on the EMU contract. Stadler continues to progress in EMU Manufacturing effort below baseline productivity levels due to COVID-19. The incorporation of this delay has resulted in a two-month delay to the 14th Trainset acceptance date and a shift of the program critical path from Electrification to EMU Manufacturing. This remains a fluid situation as the effect of COVID-19 on Stadler during the upcoming winter months remains unknown. These delays continue to be examined for potential impact on Revenue Service Date (RSD).

The forecast completion date for Stadler is now September 9th, 2022. This impact has resulted in a drawdown of the remaining 26 days schedule contingency. The program no longer has any schedule contingency.

BBII forecasted substantial completion date remains July 27, 2022 but will likely change based on recent BBII schedule updates for the remaining signal system modifications. JPB is working with BBII to improve progress on both signal system which lags behind baseline productivity level, and traction power facilities which continues to progress at a slow rate.

Shown below, Table 7-1 indicates major milestone dates for the MPS.

Table 7-1 Schedule Status

Milestones	Program Plan	Progress Schedule (November 2020) ¹
Arrival of First Vehicle in Pueblo, CO	N/A	01/26/2020 ²
Arrival of First Vehicle at JPB	N/A	07/08/20212
Segment 4 Completion	11/21/2019	06/14/2021
 Interconnection from PG&E Substation to Traction Power Substation (TPS) 	N/A	01/29/2021
PG&E Provides Permanent Power	09/09/2021	09/09/2021
Electrification Substantial Completion	08/10/2020	07/27/2022
Acceptance of 14th Trainset	08/20/2021	09/09/20222
RSD (w/o Risk Contingency)	12/09/2021	09/09/20223
FFGA RSD	08/22/2022	08/22/2022

Note:

^{1.} Dates may shift slightly as the update of this month's Progress Schedule is still in process.

² These dates are expected to be delayed due to COVID-19 impacts on Stadler's manufacturing facility in Salt Lake City.

^{3.} See "Notable Variances" for explanation on date shift.

Notable Variances

COVID-19 related delays to Stadler's assembly and test of EMU trainsets have resulted in later forecasted dates for the arrival of the first trainset in Pueblo, CO, as well as the arrival of the first trainset at JPB property, and the 14th trainset final acceptance. These delays resulted in shifting the critical path for the November schedule update from Electrification (Signal System) to EMU Trainsets Manufacturing and pushed back the Revenue Service Date without contingency from 07/22/2022 to 09/09/2022.

The forecast completion date for Stadler is now 09/09/2022. This impact has resulted in a drawdown of the remaining 26 days schedule contingency. The program no longer has any schedule contingency.

Table 7-2 Critical Path Summary

Activity	Start	Finish
Manufacturing, Testing & Acceptance of Trainsets 1 - 14	08/13/2018	09/09/2022
RSD		09/09/2022

Schedule Hold Points

Schedule Hold Points (SHP) represent key milestones on or near a schedule's critical path that are used as measurement points with respect to contingency drawdown. Delays to these key milestones have resulted in consuming program schedule contingency. Table 7-3 below reflects the SHPs for the PCEP program schedule. The dates indicated reflect the planned completion dates for each SHP.

Table 7-3 Schedule Hold Points

Schedule Hold Point (SHP)	Date
FTA/PMOC Risk Refresh	08/30/2016 (A)
Begin EMU Manufacturing	12/04/2017 (A)
Arrival of 1st Trainset in Salt Lake City	02/04/2019 (A)
Arrival of 1 st Trainset in Pueblo, CO	01/26/2020
Arrival of 1st Trainset at JPB	07/08/2021
Segment 4 Completion	06/14/2021
Conditional Acceptance of 1st Trainset	02/11/2022
System Electrified	07/27/2022
Conditional Acceptance of 14th Trainset	09/09/2022
RSD	09/09/2022

Note: "(A)" denotes an actual completion

8.0 BUDGET AND EXPENDITURES

The summary of overall budget and expenditure status for the PCEP and Third-Party Improvements is shown in the following tables. Table 8-1 reflects the Electrification budget, Table 8-2 the EMU budget, Table 8-3 the overall PCEP budget, and Table 8-4 Third Party Improvements budget. Table 8-5 summarizes the budget transfers of contingency completed this month.

Table 8-1 Electrification Budget & Expenditure Status

Description of Work	Budget	Current Budget	Cost This Month	Cost To Date	Estimate To Complete	Estimate At Completion
	(A)	(B) ¹	(C) ²	(D) ³	(E)	(F) = (D) + (E)
ELECTRIFICATION

CNPA TOTAL	\$176,495,397	\$176,437,103	\$933,120	\$58,302,132	\$118,134,971	\$176,437,103

Notes regarding tables above:

- ^{1.} Column B "Current Budget" includes executed change orders and awarded contracts.
- ^{2.} Column C "Cost This Month" represents the cost of work paid this month.
- 3. Column D "Cost To Date" includes actuals (amount paid) to date.

Table 8-4 shows improvements outside of the scope of PCEP that are funded with non-PCEP funds. These improvements are implemented through the PCEP contracts. In FTA terminology, these efforts are categorized as Concurrent Non-Project Activities (CNPA).

- CHSRA Early Pole Relocation: Relocation of 196 OCS poles as part of PCEP. Implementing these pole relocations minimizes future cost and construction impacts. This scope is funded by the CHSRA.
- PS-3 Relocation (Design): Relocate PS-3 (Burlingame) as part of PCEP to avoid a future conflict with the Broadway Grade Separation Project (BGSP). This scope is funded by the BGSP.
- PS-3 Relocation (FEMA, BGSP Design Coord.): PS-3 Relocation FEMA Update and Design Coordination: Perform incremental design effort related to the 2019 FEMA requirement update to the flood plain map and design coordination with the BGSP. This scope is funded by the BGSP.
- TPSS-2 VTA/PCEP Pole Relocation and Height (Design): Design changes due to the relocation of VTA/BART Pole at TPSS-2 location and pole height redesign for live line clearances. This scope is funded by the VTA.
- EMU Option Cars: Exercise Stadler Contract Option for 37 additional EMUs. This scope is funded with a combination of TIRCP and matching local funds.
- Add Flip-Up Seats into Bike Cars: Stadler contract change order to add four additional flip-up seats in each of the two unpowered (bike) cars per trainset (eight total per trainset). This scope is funded by Caltrain outside of the PCEP.
- Update Virtual Reality Experience: Stadler contract change order to update the virtual reality experience to reflect the latest configuration of the trainsets. This scope is funded by Caltrain outside of the PCEP.

Table 8-5 Budget Transfers of Contingency

Transfer	Description	Contingency ¹	
ELECTRIFICATION			
BBI-053-CCO-056	Delivery of Signal Cable	\$3,391	
BT-029A	Budget Allocation for GFI Electrification Eng & Mgmt - FY21 H1	\$2,066,679	
BT-033C	PG&E Tariff Schedule Work (NOV 2020)	\$33,000	
BT-037A	TASI OCS Site Prep – SSF Yard Track Removal	\$100,000	
	ELECTRIFICATION SUBTOTAL	\$2,203,070	
EMU			
PROV-071-CCO-046A	Electrical Duct Bank Extension from Parts Storage Warehouse to CCF Building	\$20,307	
PROV-071-CCO-047	Removal of Oil Line at the Exterior of the Maintenance Building in the Way of Storm Drain Line A	\$262	
PROV-071-CCO-048	Electrical Conduit and Wires at Track 5	\$6,770	
	EMU SUBTOTAL	\$27,339	
	PCEP TOTAL	\$2,230,409	

Notes regarding tables above:

Table 8-5 shows budget transfers of project contingency implemented during the current monthly reporting period. This table includes contingency transfers for both executed contract change orders as covered under Section 9.0 and uses of contingency for Program budget line items outside the five PCEP contracts.

Appendix D includes costs broken down by Standard Cost Code (SCC) format. This format is required for reporting of costs to the FTA. The overall project total in the SCC format is lower than the project costs in table 8-3. This is due to the exclusion of costs incurred prior to the project entering the Project Development phase.

^{1.} Budget amount transferred from project contingency. A negative amount represents a credit to contingency.

9.0 CHANGE MANAGEMENT

The change management process establishes a formal administrative work process associated with the initiation, documentation, coordination, review, approval and implementation of changes that occur during the design, construction or manufacturing of the PCEP. The change management process accounts for impacts of the changes and ensures prudent use of contingency.

Currently the PCEP contracts are BBII, CEMOF, Stadler, SCADA, Tunnel Modifications, and Amtrak.

A log of all executed change orders can be found in Appendix E.

Executed Contract Change Orders (CCO) This Month

Electrification Contract

10.0 FUNDING

Figure 10-1 depicts a summary of the funding plan for the PCEP. It provides a breakdown of the funding partners as well as the allocated funds. As previously noted, FTA awarded \$97 million in Section 5307 funding for the project and the next \$100 million in Core Capacity funding.

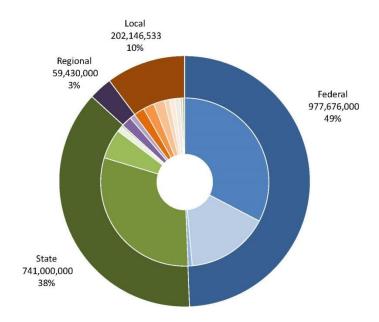

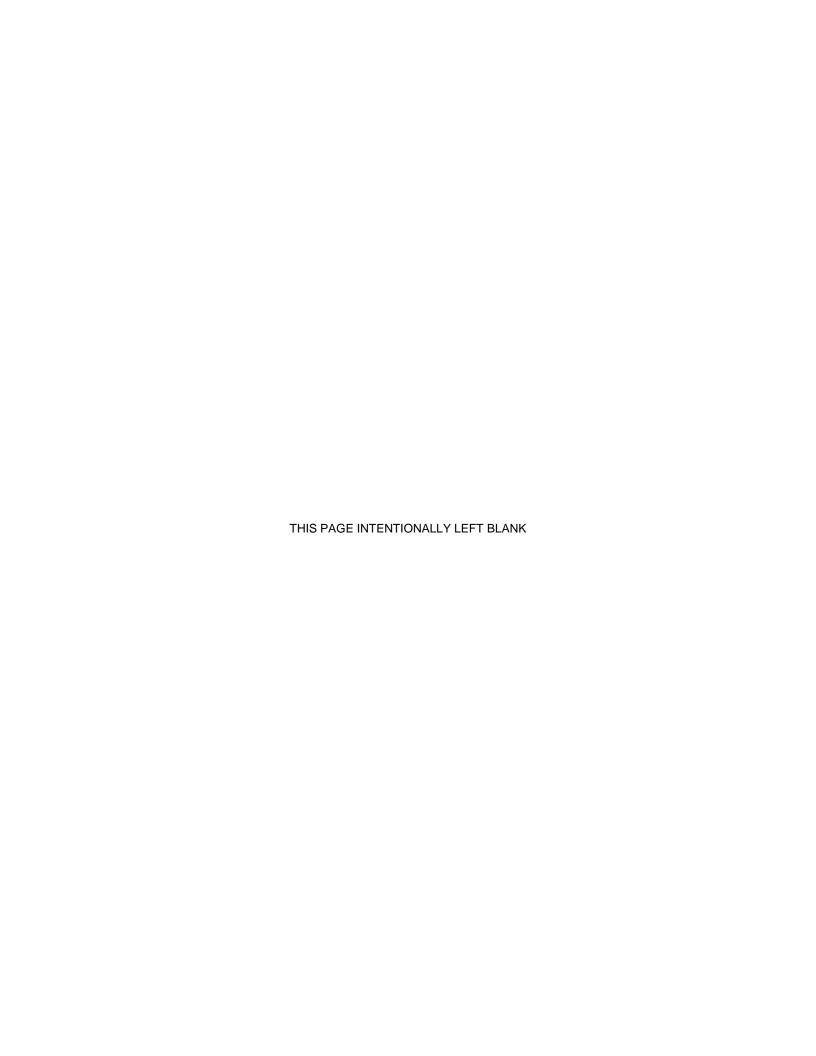

Figure 10-1 Funding Plan

Notes:

^{*}Includes necessary fund transfer with SMCTA

^{**}Includes \$4M CMAQ Transfer considered part of SF local contribution

11.0 RISK MANAGEMENT

The risk management process is conducted in an iterative fashion throughout the life of the project. During this process, new risks are identified, other risks are resolved or managed, and potential impacts and severity modified based on the current situation. The Risk Management team's progress report includes a summary on the effectiveness of the Risk Management Plan, any unanticipated effects, and any correction needed to handle the risk appropriately.

The Risk Management team meets monthly to identify risks and corresponding mitigation measures. Each risk is graded based on the potential cost and schedule impacts they could have on the project. This collection of risks has the greatest potential to affect the outcome of the project and consequently is monitored most closely. For each of the noted risks, as well as for all risks on the risk register, mitigation measures have been identified and are being implemented. Progress in mitigating these risks is confirmed at monthly risk assessment meetings attended by project team management and through continuous monitoring of the Risk Management Lead.

The team has identified the following items as top risks for the project (see Appendix F for the complete Risk Table):

- 1. The contractor may not complete and install signal design including Two-speed check (2SC) modifications within budget and schedule.
- 2. Extent of differing site conditions and associated redesign efforts results in delays to the completion of the electrification contract and increases program costs.
- 3. Sub-optimal contractor sequencing, when progressing design and clearing foundation locations may result in construction inefficiencies.
- 4. Property not acquired in time for contractor to do work.
- 5. Additional property acquisition is necessitated by change in design.
- 6. Solution to FRA concerns over bike storage impeding path to emergency exit windows path results in increased costs and potential rework.
- 7. TASI may not have sufficient number of signal maintainers for testing.
- 8. Contractor generates hazardous materials that necessitate proper removal and disposal in excess of contract allowances and expectations.
- 9. Change of vehicle sub-suppliers results in additional first article inspections at cost to JPB (i.e., COVID, bankruptcy).
- 10. Collaboration across multiple disciplines to develop a customized rail activation program may fail to comprehensively address the full scope of issues required to operate and maintain an electrified railroad and decommission the current diesel fleet.

Activity This Month

- Updated risk descriptions, effects, and mitigations based upon weekly input from risk owners. Monthly cycle of risk updating was completed based on schedules established in the Risk Identification and Mitigation Plan.
- Updated risk retirement dates based upon revisions to the project schedule and input from risk owners.

Monthly Progress Report

- Continued weekly monitoring of risk mitigation actions and publishing of the risk register.
- Continued monitoring of issues on issues log for determination of new risks.
- The Risk Management team attended Project Delivery, Vehicle Design, and Systems Integration meetings to monitor developments associated with risks and to identify new risks.

Figures 11-1 and 11-2 show the risks identified for the program. Risks are categorized as top risk, upcoming risk, and all other risks. The categories are based on a rating scale composed of schedule and cost factors. Top risks are considered to have a significantly higher than average risk grade. Upcoming risks are risks for which mitigating action must be taken within 60 days. All other risks are risks not falling into other categories.

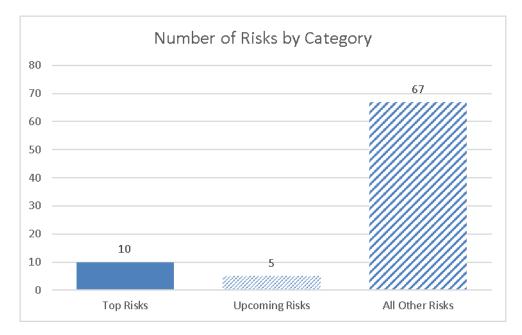

Figure 11-1 Monthly Status of Risks

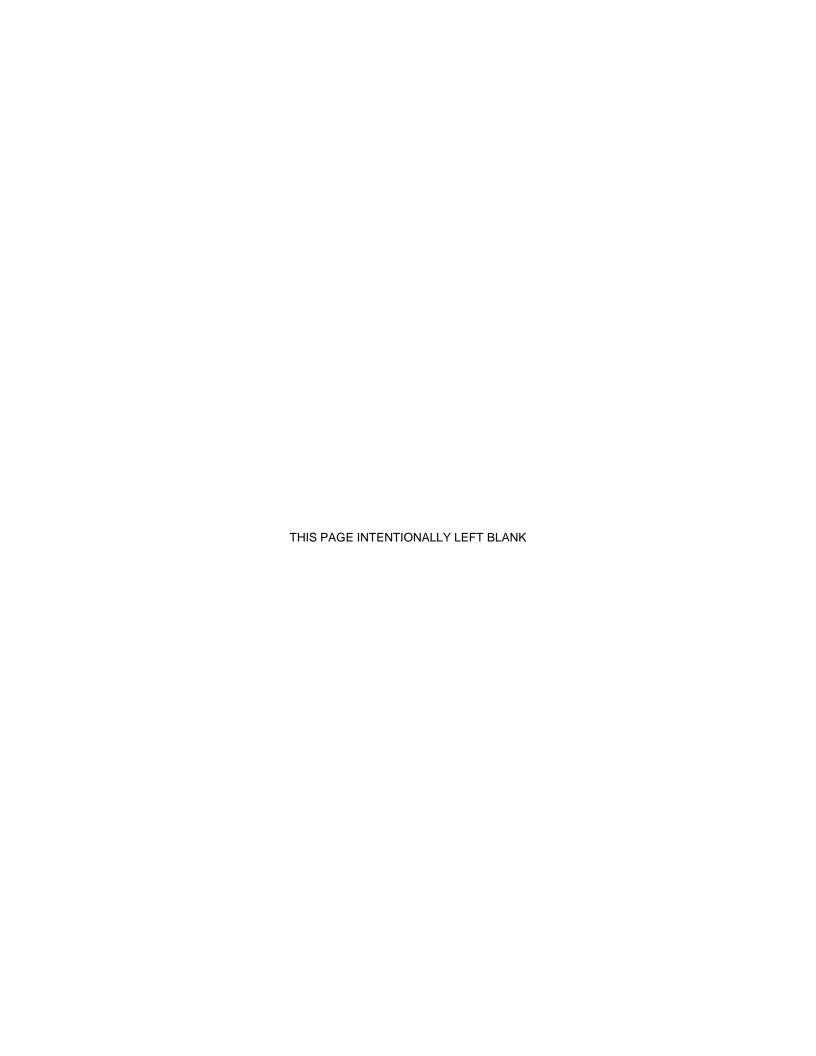

Total Number of Active Risks = 82

Figure 11-2 Risk Classification

Total Number of Active Risks = 82

- Conduct weekly monitoring of risk mitigation actions and continue publishing risk register.
- Update risk descriptions, effects, mitigations and retirement dates based on weekly monitoring and attendance at key project meetings.
- Monitor issues on issues log for determination of potential new risks.
- Convene Risk Assessment Committee meeting.

12.0 ENVIRONMENTAL

12.1. Permits

The PCEP has obtained the required environmental permits from the following agencies/federal regulations: Section 106 of the National Historic Preservation Act of 1966 (NHPA), Section 7 of the Endangered Species Act (ESA), United States Army Corps of Engineers, San Francisco Bay Regional Water Quality Control Board (SFWQCB), the California Department of Fish and Wildlife, and the San Francisco Bay Conservation Development Commission.

Activity This Month

None

Activity Next Month

None

12.2. Mitigation Monitoring and Reporting Program (MMRP)

The California Environmental Quality Act (CEQA) requires that a Lead Agency establish a program to monitor and report on mitigation measures that it has adopted as part of the environmental review process. The PCEP team has prepared a MMRP to ensure that mitigation measures identified in the PCEP Environmental Impact Report are fully implemented during project implementation. PCEP will implement the mitigation measures through its own actions, those of the DB contractor and actions taken in cooperation with other agencies and entities. The status of each mitigation measure in the MMRP is included in Appendix G.

Activity This Month

- Environmental compliance monitors were present during project activities (OCS pole foundation installation, pot holing for utility location, tree trimming/removal, conduit installation, abandoned signal cable removal, permanent fence installation, fiber optic cable installation, transformer installation, gantry installation, etc.) occurring in areas that required environmental compliance monitoring. The monitoring was conducted in accordance with measures in the MMRP in an effort to minimize potential impacts on sensitive environmental resources.
- Noise and vibration monitoring also occurred during project activities, and nonhazardous soil was removed from the right of way (ROW).
- Environmentally Sensitive Area (ESA) delineation (staking and/or fencing)
 occurred to delineate jurisdictional waterways and other potentially sensitive areas
 that should be avoided during upcoming construction activities. Pre-construction
 surveys for sensitive avian species continued at previously identified potential
 habitat locations. Wildlife exclusion fencing installation and monitoring occurred
 adjacent to portions of the alignment designated for wildlife exclusion fencing.

Monthly Progress Report

 Best management practices (BMPs) installation and maintenance (e.g., silt fencing, straw wattles with no monofilament netting per wildlife agency permit requirements, soil covers, etc.) occurred at equipment staging areas and other work areas throughout the alignment in accordance with the project-specific Stormwater Pollution Prevention Plan (SWPPP).

- Environmental compliance monitors will continue to monitor project activities (OCS pole foundation installation, pot holing for utility location, tree trimming/removal, conduit installation, abandoned signal cable removal, permanent fence installation, fiber optic cable installation, utility work at Diridon Station, setting signal house at CT 12.16, etc.) occurring in areas that require environmental compliance monitoring in an effort to minimize potential impacts on sensitive environmental resources in accordance with the MMRP.
- Noise and vibration monitoring of project activities will continue to occur and nonhazardous soil will continue to be removed.
- Biological surveyors will continue to conduct pre-construction surveys for sensitive wildlife species ahead of project activities. Pre-construction nesting bird surveys have ceased for the 2020 season and will recommence on February 1, 2021 for the 2021 season.
- BMPs installation will continue in accordance with the project-specific SWPPP, and ESA staking and fencing will continue to occur, to delineate jurisdictional waterways, and other potentially sensitive areas, that should be avoided during upcoming project activities.
- Wildlife exclusion fencing will continue to be installed and maintained prior to upcoming construction activities adjacent to potentially suitable habitat for sensitive wildlife species.

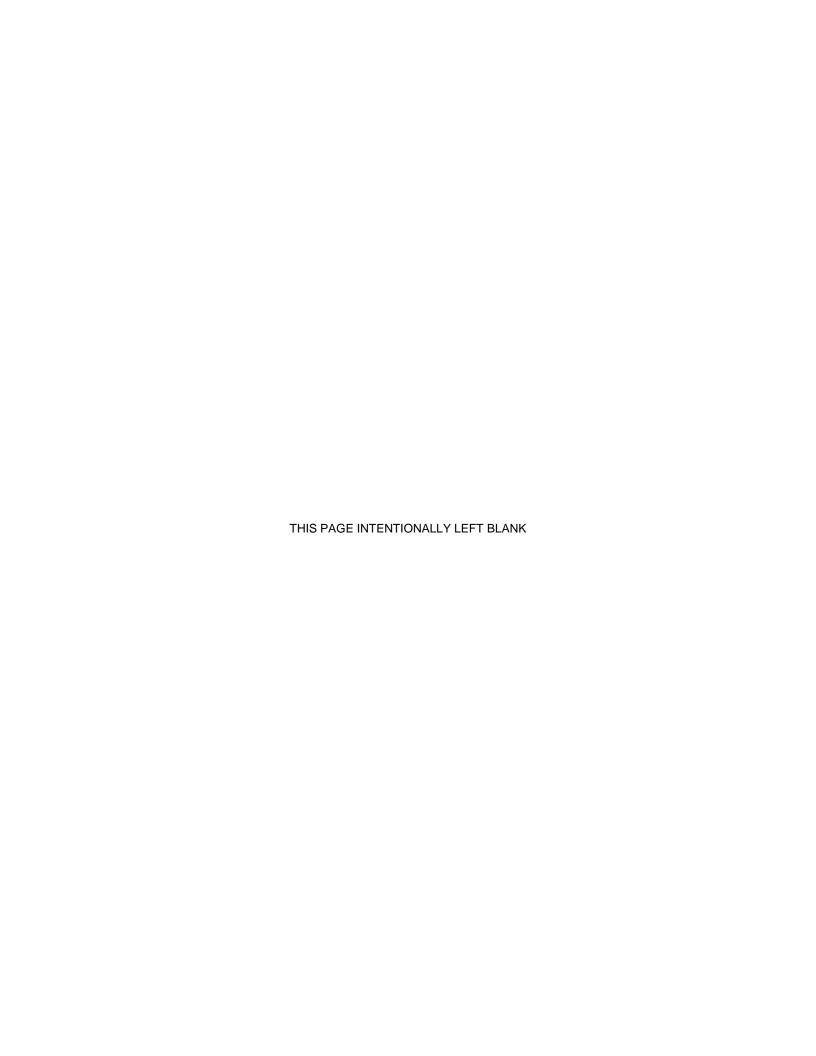

13.0 UTILITY RELOCATION

Implementation of the PCEP requires relocation or rerouting of both public and private utility lines and/or facilities. Utility relocation will require coordination with many entities, including regulatory agencies, public safety agencies, federal, state, and local government agencies, private and public utilities, and other transportation agencies and companies. This section describes the progress specific to the utility relocation process.

Activity This Month

- Conducted utility coordination meeting to discuss overall status and areas of potential concern from the utilities.
- Completed relocation of utilities in Palo Alto by Palo Alto Power.
- Continued relocation of Comcast and AT&T Utilities in all Segments.

- Coordinate with individual utility owners on the next steps of relocations, including support of any required design information.
- Update the relocation schedule as information becomes available from the utility owners.
- Continue to review relocation design from communications companies and coordinate relocation field work.
- Continue communication relocations in all Segments.

14.0 REAL ESTATE

The PCEP requires the acquisition of a limited amount of real estate. In general, Caltrain uses existing Right of Way (ROW) for the PCEP, but in certain locations, will need to acquire small portions of additional real estate to expand the ROW to accommodate installation of OCS supports (fee acquisitions or railroad easements) and associated Electrical Safety Zones (ESZ) (easements). There are two larger full acquisition areas required for wayside facilitates. The PCEP Real Estate team manages the acquisition of all property rights. Caltrain does not need to acquire real estate to complete the EMU procurement portion of the PCEP.

Of the parcels identified at the beginning of the project, there remain only three owners from whom the agency requires possession.

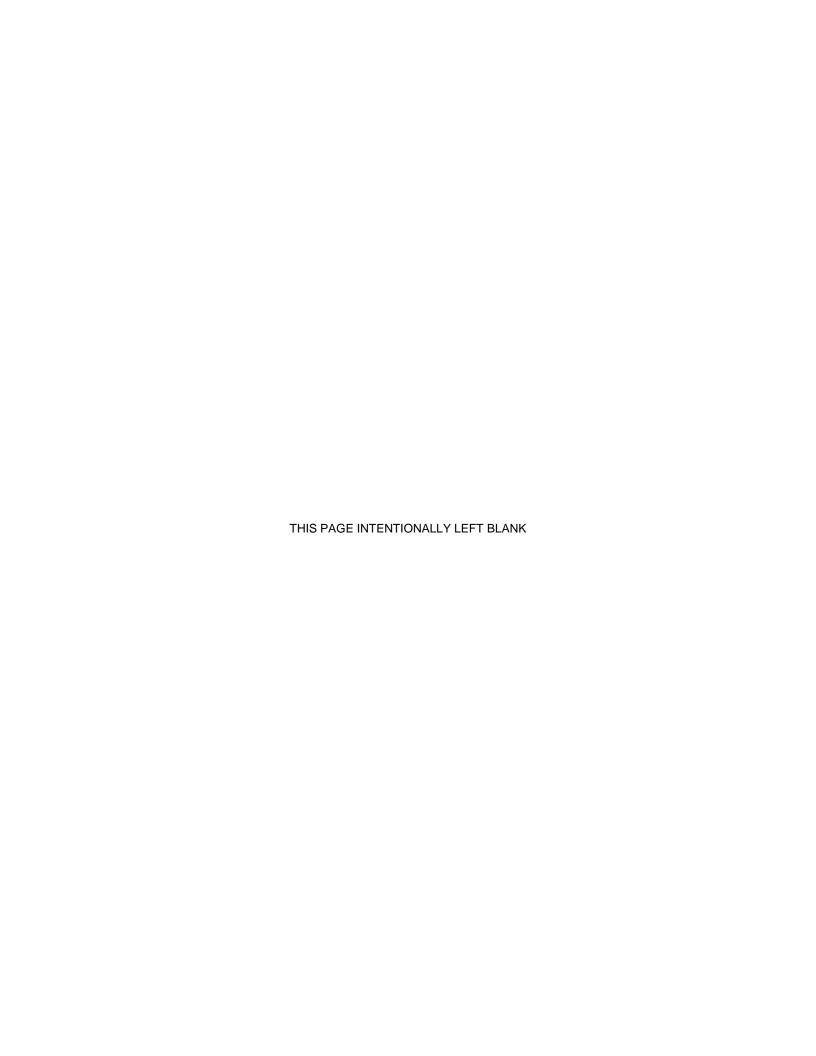

The Real Estate team's current focus is working to identify new parcels and acquire them in conjunction with the project schedule.

- Staff has defined a process to ensure that BBII conveys new property needs (both for poles and for overhead wires) as soon as possible.
 - BBII must justify and JPB must approve all new parcels.
- Design needs to progress to enable BBII to identify exact acquisition areas.
- Staff is conducting pre-acquisition activities as appropriate.
- JPB has approved eight new parcels to date.

Activity This Month

- Staff continues to review potential new pole locations and is engaging in a systemwide review of potential ESZ needs Staff continues to meet with the internal signal team and BBII signal team to determine potential Real Estate interests.
- Staff entered into discussions with Brittania Gateway to develop terms under which the design of the TPS-1 Interconnect Facility could be redesigned to reflect the owner's preference for an underground design.
- Staff and the Universal Paragon Corporation (UPC) developed a conceptual agreement on business terms to allow the potential for early access onto their property, a vital site for catenary pole installation.

- Continued review of ESZ needs submitted by BBII compared to direction from contract.
- Continue to meet with internal signal team and BBII signal team to determine potential Real Estate needs.
- Make offers on the parcel for which appraisals have been completed.
- Continue to work with project team to identify and analyze new potential parcels.
- Obtain access to Britannia Gateway site.
- Continue to work with UPC to finalize early access.

15.0 THIRD PARTY AGREEMENTS

Third-party coordination is necessary for work impacting public infrastructure, utilities, ROW acquisitions, and others. Table 15-1 below outlines the status of necessary agreements for the PCEP.

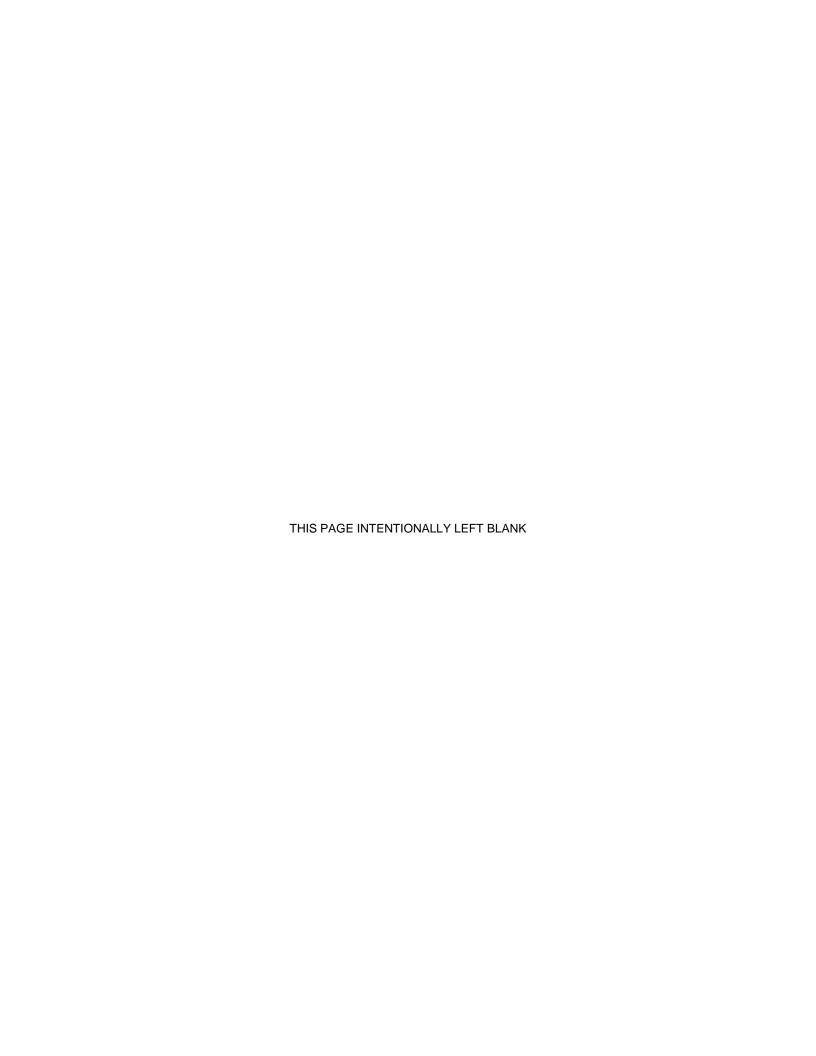

Table 15-1 Third-Party Agreement Status

Туре	Agreement	Third-Party	Status
		City & County of San Francisco	Executed
		City of Brisbane	Executed
		City of South San Francisco	Executed
		City of San Bruno	Executed
		City of Millbrae	Executed
		City of Burlingame	Executed
		City of San Mateo	Executed
		City of Belmont	Executed
		City of San Carlos	Executed
	Construction & Maintenance 1	City of Redwood City	Executed
Governmental	iviaintenance	Town of Atherton	Not Needed
Jurisdictions		County of San Mateo	Executed
		City of Menlo Park	Executed
		City of Palo Alto	Executed
		City of Mountain View	Executed
		City of Sunnyvale	Executed
		City of Santa Clara	Executed
		County of Santa Clara	Executed
		City of San Jose	Executed
		San Francisco	In Process

Otilities	Operating Rules	CPUC	Executed
	Construction & Maintenance	Bay Area Rapid Transit	Executed ²
Transportation	Construction & Maintenance	California Dept. of Transportation (Caltrans)	In Process
& Railroad	Trackage Rights	UPRR	Executed ²

Notes regarding table above:

^{2.} Utilizing existing agreements.

^{1.} Agreements memorialize the parties' consultation and cooperation, designate respective rights and obligations and ensure cooperation between the JPB and the 17 cities and three counties along the Caltrain ROW and within the PCEP limits in connection with the designand construction of the PCEP.

16.0 GOVERNMENT AND COMMUNITY AFFAIRS

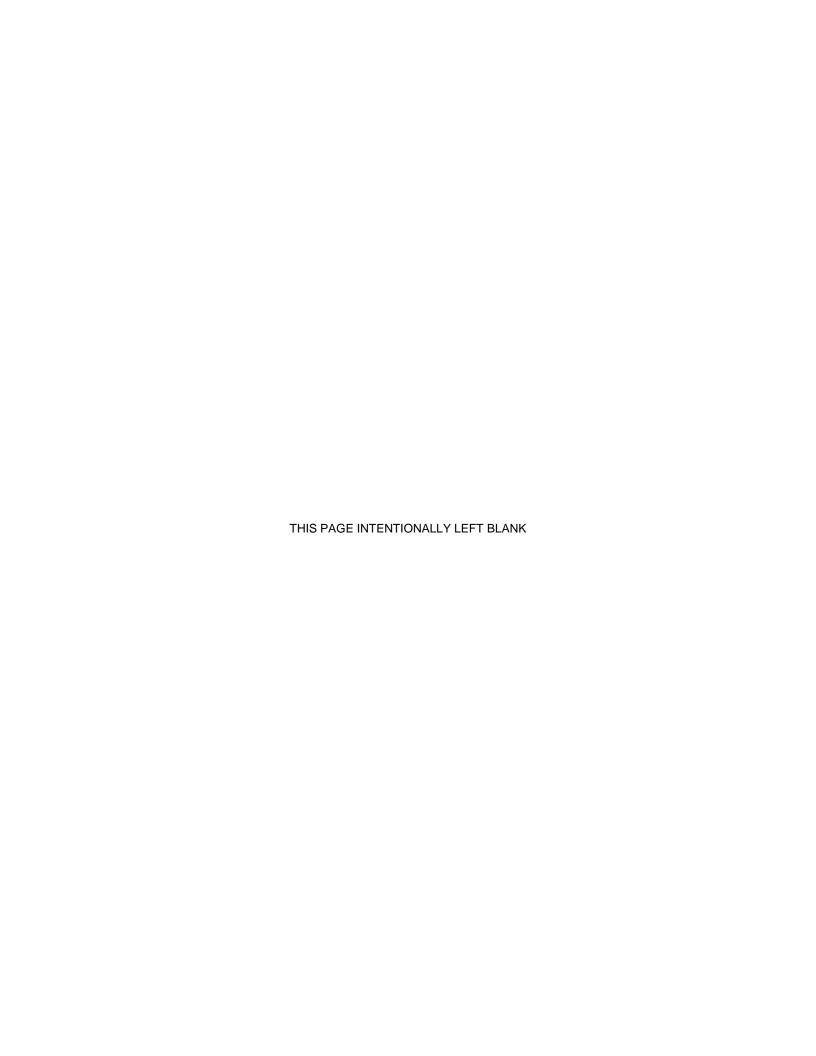

The Community Relations and Outreach team coordinates all issues with all jurisdictions, partner agencies, government organizations, businesses, labor organizations, local agencies, residents, community members, other interested parties, and the media. In addition, the team oversees the BBII's effectiveness in implementing its Public Involvement Program.

Presentations/Meetings

- City/County Staff Coordinating Group
- Local Policy Makers Group
- Caltrain Bicycle Advisory Committee

Third Party/Stakeholder Actions

- Menlo Park OCS Drawings DCN
- South San Francisco TPS-1 Drawings Conformed

17.0 DISADVANTAGED BUSINESS ENTERPRISE (DBE) PARTICIPATION AND LABOR STATISTICS

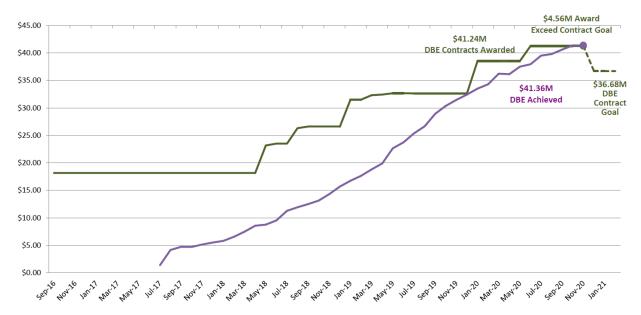

BBII proposed that 5.2% (\$36,681,279) of the DB base contract value including DBE contract change orders (\$705,409,217) would be subcontracted to DBEs.

Activity This Month

As expressed in Figure 17-1 below, to date BBII reports:

- \$41,361,619 has been paid to DBE subcontractors.
- \$41,242,326 of DBE contracts have been awarded (to be verified).
- 5.86% has been achieved.

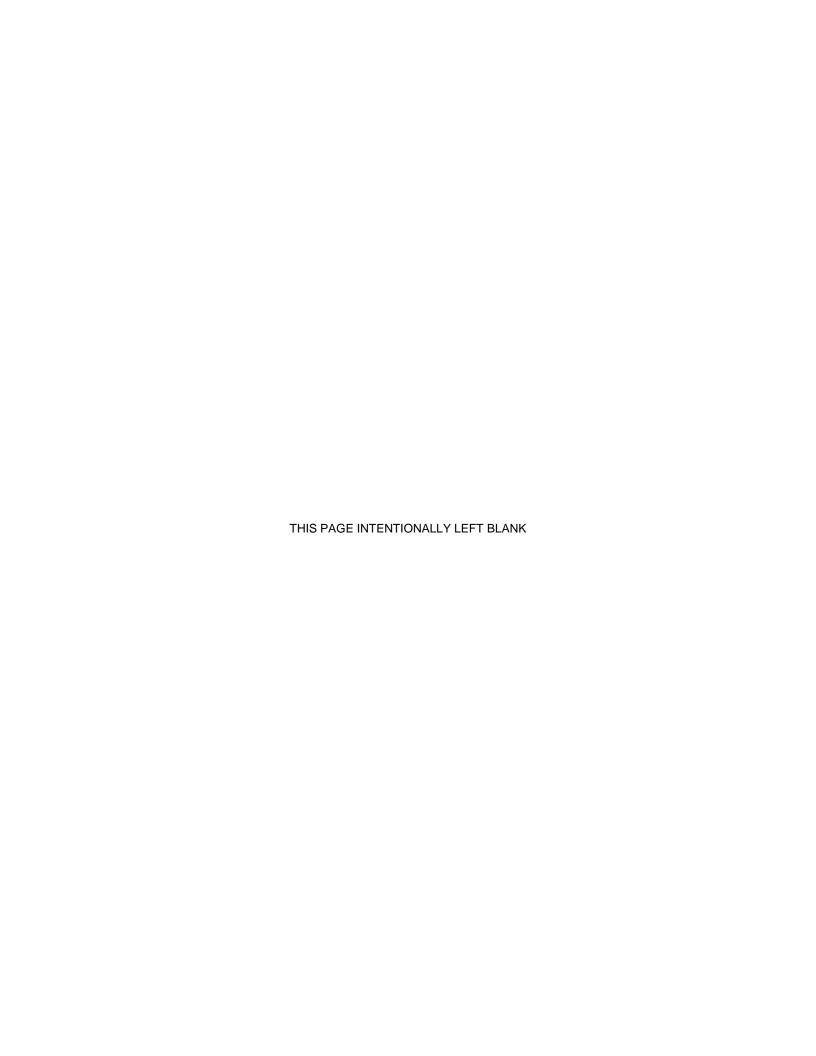

Figure 17-1 DBE Participation

Activity Next Month

BBII has proposed the following key actions:

"In the month of December, 2020, we continue to anticipate increasing our DBE commitments to firms who we are currently negotiating pricing on proposed work or Professional Services Agreements. We are optimistic about the prospect of making future awards to DBE firms. We also anticipate that the existing project work will increase resulting in expanded work for current DBE subcontractors."

18.0 PROCUREMENT

Invitation for Bids (IFB)/Request for Quotes (RFQ)/ Request for Proposals (RFP) Issued this Month:

None

Bids, Quotes, Proposals in Response to IFB/RFQ/RFP Received this Month:

 RFQ – Scissor Lift Work Platform for Peninsula Corridor Electrification Project (PCEP)

Contract Awards this Month:

None

Work Directive (WD)/Purchase Order (PO) Awards & Amendments this Month:

Multiple WDs & POs issued to support the program needs

In Process IFB/RFQ/RFP/Contract Amendments:

None

Upcoming Contract Awards/Contract Amendments:

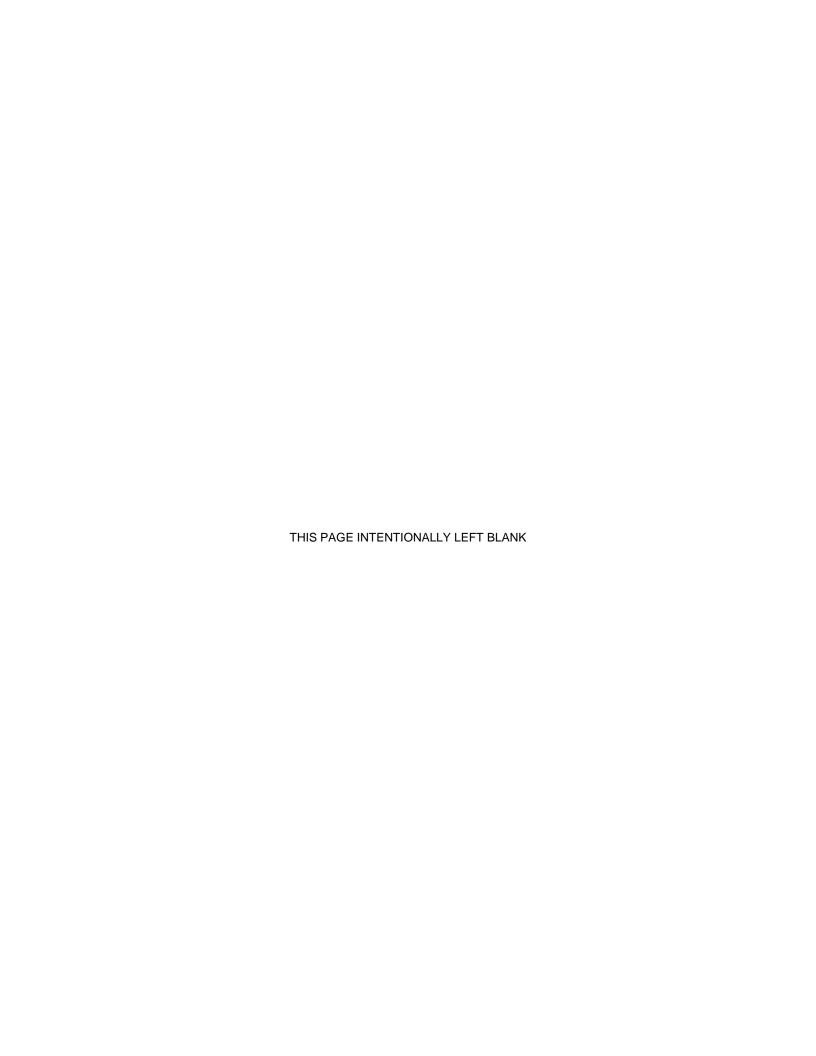

None

Upcoming IFB/RFQ/RFP to be Issued:

None

Existing Contracts Amendments Issued:

None

19.0 TIMELINE OF MAJOR PROJECT ACCOMPLISHMENTS

Below is a timeline showing major project accomplishments from 2001 to 2017:

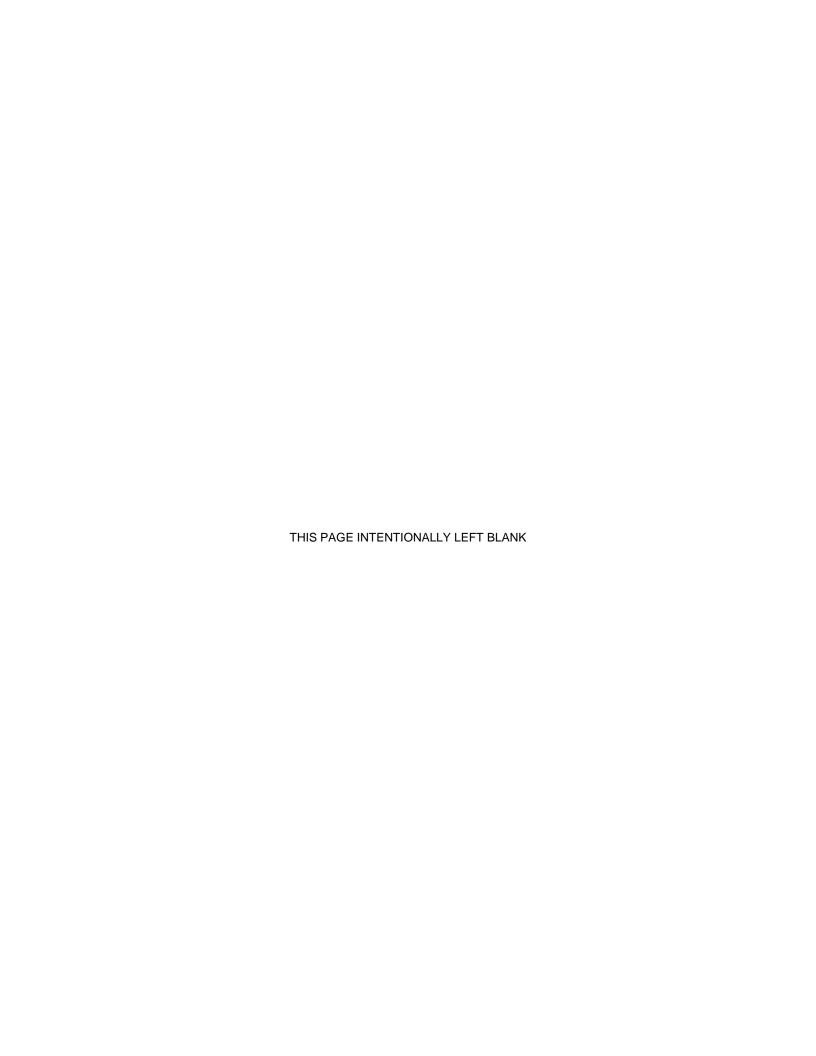

Date 2001	Milestone Began federal National Environmental Policy Act (NEPA) Environmental Assessment (EA) / state EIR clearance process
2002	Conceptual Design completed
2004	Draft NEPA EA/EIR
2008	35% design complete
2009	Final NEPA EA/EIR and Finding of No Significant Impact (FONSI)
2014	RFQ for electrification RFI for EMU
2015	JPB approves final CEQA EIR JPB approves issuance of RFP for electrification JPB approves issuance of RFP for EMU Receipt of proposal for electrification FTA approval of Core Capacity Project Development
2016	JPB approves EIR Addendum #1: PS-7 FTA re-evaluation of 2009 FONSI Receipt of electrification best and final offers Receipt of EMU proposal Application for entry to engineering to FTA Completed the EMU Buy America Pre-Award Audit and Certification Negotiations completed with Stadler for EMU vehicles Negotiations completed with BBII, the apparent best-value electrification firm JPB approves contract award (LNTP) to BBII JPB approves contract award (LNTP) to Stadler FTA approval of entry into engineering for the Core Capacity Program Application for FFGA
2017	FTA finalized the FFGA for \$647 million in Core Capacity funding, met all regulatory requirements including end of Congressional Review Period (February) FTA FFGA executed, committing \$647 million to the project (May) JPB approves \$1.98 billion budget for PCEP (June) Issued NTP for EMUs to Stadler (June 1) Issued NTP for electrification contract to BBII (June 19) Construction began (August) EMU manufacturing began (October) Issued NTP for SCADA to Rockwell Collins (ARINC) (October) Issued NTP for CEMOF Facility Upgrades to HNTB (November)

Date	Milestone
2018	Completed all PG&E agreements
	JPB approves contract award to Mitsui for the purchase of electric locomotives and Amtrak for overhaul services, storage, acceptance testing, training, and shipment of locomotive to CEMOF
	JPB approves authorization for the Executive Director to negotiate final contract award to ProVen for tunnel modifications and track rehabilitation project
	JPB approves contract award (LNTP) to ProVen for tunnel modifications
	Issued NTP to ProVen for tunnel modifications (October)
	Amended contract with ProVen to include OCS in the tunnels (November)
2019	JPB approves contract award to ProVen for CEMOF modifications (February)
	JPB approves LNTP to ProVen for CEMOF modifications (April)
	JPB approves NTP to ProVen for CEMOF modifications (September)
2020	JPB approves agreement amendment to PG&E for interconnection construction
	JPB executes agreement with PG&E for interconnection construction (May)
	FRA approved the waiver for Alternative Vehicle Technology regarding crashworthiness of EMU cars.

Peninsula Corridor Electrification Project Monthly Progress Report	
Appendix F – Risk Table	

Listing of PCEP Risks and Effects in Order of Severity

ID	RISK DESCRIPTION	EFFECT(S)			
314	The contractor may not complete and install signal design including Two-speed check (2SC) modifications within budget and schedule.	Delay and additional cost for rework.			
303	Extent of differing site conditions and associated redesign efforts results in delays to the completion of the electrification contract and increases program costs.	Extends construction of design-build contract with associated increase in project costs • DSC design cost • Inefficiencies • Construction costs related to DSCs (i.e., larger foundations) • Additional potholing			
010	Potential for Stadler's sub-suppliers to fall behind schedule or delays in parts supply chain result in late completion of vehicles.	 Delay in obtaining parts / components Cost increases. (See Owner for allocation of costs) Schedule increase - 3 months (See Owner for allocation of damages associated with this Risk) 			
313	Sub-optimal contractor sequencing, when progressing design and clearing foundation locations may result in construction inefficiencies	Contractor claims for increase in construction and design costs, and reduced production rates extending construction duration			
240	Property not acquired in time for contractor to do work. Property Acquisition not complete per contractor availability date <>Fee <>Easement <>Contract stipulates that if parcels are not available by contract date, there is only a delay if parcels are not available by the time contractor completes the Segment	Potential delays in construction schedule			
267	Additional property acquisition is necessitated by change in design.	New project costs and delays to schedule.			
304	Solution to FRA concerns over bike storage impeding path to emergency exit windows path results in increased costs and potential rework.	Protracted negotiations with FRA to achieve original design			
209	TASI may not have sufficient number of signal maintainers for testing.	 Delays to construction/testing. Delays to completion of infrastructure may delay acceptance of vehicles 			

ID	RISK DESCRIPTION	EFFECT(S)	
273	Contractor generates hazardous materials, that necessitates proper removal and disposal in excess of contract allowances and expectations.	Delay to construction while removing and disposing of hazardous materials resulting in schedule delay, increased construction costs, and schedule delay costs.	
308	Rejection of DVR for ATF and static wires results in cost and schedule impacts to PCEP.	Delay and delay claims	
318	Change of vehicle sub-suppliers results in additional first article inspections at cost to JPB (i.e., COVID, bankruptcy)	PCEP incurs additional cost to validate supplier and product, including repeat FAIs as needed	
263	Collaboration across multiple disciplines to develop a customized rail activation program may fail to comprehensively address the full scope of issues required to operate and maintain an electrified railroad and decommission the current diesel fleet.	Delay in testing of EMUs. Delay in Revenue Service Date. Additional costs for Stadler and BBII due to overall schedule delays.	
011	Risks in achieving acceptable vehicle operations performance: <> software problems <> electrical system problems <> mechanical problems <> systems integration problems <> interoperability with diesel equipment Increased issues lately with vehicles regarding system integration and compatibility.	Cost increase. Delays vehicle acceptance Potential spill-over to other program elements	
244	Delays to completion of Segment 4 and then the entire alignment would create storage issues and impede the ability to exercise (power up and move) EMUs and delay testing of the delivered EMUs.	Delay claims from the EMU contractor (Stadler) and expiration of the EMU 2-year warranty before putting significant mileage on the EMUs. Inability to exercise EMUs	
296	PG&E needs to complete interconnection to be sufficiently complete to accept interim power	Delay in testing and increased costs	
319	Failure of BBI to order cages in advance results in delays to foundation installation	Delays in installation of catenary system and additional cost for track protection and oversight.	
322	BBII needs to complete traction power substations to be sufficiently complete to accept interim power	Delay in testing and increased costs	
325	EMU production delay. Possible that there are quality issues, failed factory tests, poor integration / control of suppliers.	Schedule Increase	

ID	RISK DESCRIPTION	EFFECT(S)		
327	EMU production delay. Possible that there is poor integration / control of suppliers.	Schedule Increase		
013	Vehicle manufacturer could default.	Prolonged delay to resolve issues (up to 12 months) Increase in legal expenses Potential price increase to resolve contract issue		
067	Relocation of overhead utilities must precede installation of catenary wire and connections to TPSs. Relocation work will be performed by others and may not be completed to meet BBII's construction schedule.	Delay in progress of catenary installation resulting in claims and schedule delay		
223	Major program elements may not be successfully integrated with existing operations and infrastructure in advance of revenue service.	Proposed changes resulting from electrification may not be fully and properly integrated into existing system.Rework resulting in cost increases and schedule delays		
242	Track access does not comply with contract-stipulated work windows.	Contractor claims for delays, schedule delays and associated costs to owner's representative staff.		
253	Permits for bridges may not be issued in a timely manner.	Delays to issuance of permit for construction while negotiating and executing an operation and maintenance agreement for equipment installed on bridges; existing bridge deficiencies could result in additional costs to PCEP.		
261	Although EMUs meets their electromagnetic emissions limits and wayside signal system track circuits meet their susceptibility requirements there are still compatibility issues leading to improper signal system operation	Changes on the EMU and/or signal system require additional design and installation time and expense.		
285	Potential for inflation, (except with respect to Maintenance Option) to increase contractor costs.	Higher cost		
286	Potential for wage escalation, (except for Maintenance Option) to increase contractor costs.	Higher cost		

ID	RISK DESCRIPTION	EFFECT(S)			
329	Work for PCEP that is being constructed by other projects may not be completed in accordance with the BBII project schedule. Critical work includes: • Installation of signal house as part of SSF Station Project	Delay to BBII construction progress and associated delay claims			
056	Lack of operations personnel for testing.	Testing delayed.Change order for extended vehicle acceptance.			
115	Other capital improvement program projects compete with PCEP for track access allocation and requires design coordination (design, coordination, integration).	Schedule delay as resources are allocated elsewhere, won't get track time, sequencing requirements may delay PCEP construction, track access requirements must be coordinated.			
321	Single Phase Study and interconnection agreement may be delayed preventing energization of Segment 4 for milestone 1				
082	Unexpected restrictions could affect construction progress:<> night work<> noise<> local roads<> local ordinances	• Reduced production rates.• Delay			
270	OCS poles or structures as designed by Contractor fall outside of JPB row	Additional ROW Take, additional cost and time			
012	Potential for electromagnetic interference (EMI) to private facilities with sensitive electronic equipment caused by vehicles.	 Increased cost due to mitigation Potential delay due to public protests or environmental challenge. 			
014	Contractor's proposal on stakeholder requested changes to the vehicles (e.g., High Level Doors in lieu of windows as emergency exits) may significantly exceed JPB authorized amount.	Schedule delay. Cost increase.			
078	Need for unanticipated, additional ROW for new signal enclosures.	Delay while procuring ROW and additional ROW costs.			
087	Unanticipated HazMat or contaminated hot spots encountered during foundation excavations for poles, TPSS, work at the yards.	Increased cost for clean-up and handling of materials and delay to schedule due to HazMat procedures.			
088	Construction safety program fails to sufficiently maintain safe performance.	Work stoppages due to safety incidents resulting in schedule delay and additional labor costs.			
171	Electrification facilities could be damaged during testing.	Delay in commencing electrified operations.			
247	Timely resolution of 3rd party design review comments to achieve timely approvals	Delay to completion of design and associated additional labor costs.			

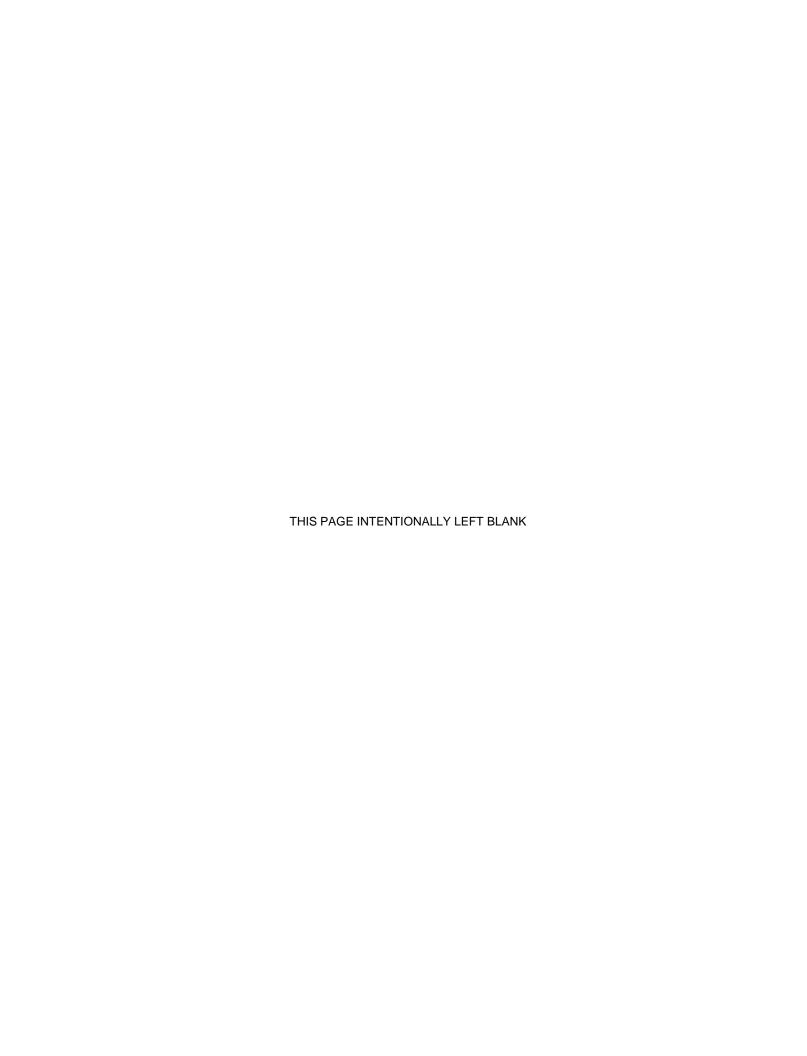

ID	RISK DESCRIPTION	EFFECT(S)			
251	Subcontractor and supplier performance to meet aggressive schedule <> Potential issue meeting Buy America requirements	Delay to production schedule resulting in increased soft costs and overall project schedule delay.			
272	Final design based upon actual Geotech conditions	Could require changes			
287	Design changes may necessitate additional implementation of environmental mitigations not previously budgeted.	Increased cost for environmental measures and delays to construct and overall delay in construction schedule			
289	Coordination and delivery of permanent power for power drops for everything except traction power substations along alignment	Can't test resulting in delays to schedule and associated additional project costs.			
291	Order/manufacture of long lead items prior to 100% IFC design document that proves to be incorrect	Design change and/or delays			
292	Potential that UPS will not fit in the spaces allotted to communications work within the buildings.	Requisite backup capacity units under design criteria could result in the need for larger unit than originally planned resulting in design and fabrication changes and associated schedule delays and costs.			
317	JPB may not make timely acquisition of resources to staff rail activation plan with key personnel.	Delay in operating electrified railroad - delay of RSD.			
323	FRA concerns require re-design				
326	EMU production delay. Possible that there are failed factory tests	Schedule Increase			
027	Vehicle power consumption may not meet requirements.<>System impact study and load flow show no issues	Issue with PG&E. Can't run full acceleration.			
031	New cars possibly not reliable enough to be put into service as scheduled	Operating plan negatively impacted			
042	Full complement of EMUs not available upon initiation of electrified revenue service	Late delivery impacts revenue service date.			
101	PG&E may not be able to deliver permanent power for the project within the existing budget and in accordance with the project schedule	Additional project costs; potential delay to revenue service date			
150	Number of OCS pole installation is significant. Any breakdown in sequencing of operations or coordination of multiple crews will have a substantial effect on the project.	Delay.			

ID	RISK DESCRIPTION	EFFECT(S)		
245	Failure of BBI to submit quality design and technical submittals in accordance with contract requirements • \$3-\$5M/month burn rate for Owner's team during peak	Delays to project schedule and additional costs for preparation and review of submittals.		
252	Failure of BBI to order/manufacture long lead items prior to 100% IFC design document approval by JPB	Delays to project schedule and additional cost for contractor and JPB staff time.		
271	Need for additional construction easements beyond that which has been provided for Contractor proposed access and staging	Additional cost and time		
306	Possible legal challenge and injunction to any changes in PCEP requiring subsequent CEQA or NEPA environmental clearance documentation/actions.	Worst case: a judge issues an injunction, which would prohibit any work ONLY on the project scope of the environmental document. Impact to the project from cost and schedule impact depends on if work is on the critical or becomes on the critical path.		
008	Requests for change orders after vehicles are in production	Delays to manufacturing of vehicles and additional design and manufacturing costs.		
023	Manufacturer cannot control vehicle weight to meet specifications.	Increased operating cost.		
025	Potential that vehicles cannot meet requirements for "Mean Time to Repair" (MTTR).	Increased maintenance cost.		
032	Failure to come up to speed on stakeholder safety requirements:<> FTA<> FRA<> CPUC	Takes longer than expected to gain FRA/FTA concurrence on waiver and/or level boarding requirements.		
053	Failure to meet Buy America requirements. (Contractor definition of component v. sub-component may not be accepted by Caltrain / FTA.)	Potential need for negotiations that might lead to delay of project award. (BA is not negotiable)		
054	Infrastructure not ready for vehicles (OCS, TPS, Commissioning site / facility).	Increases cost if done off property		
069	Potential need for additional construction easements. Especially for access and laydown areas. Contractor could claim project is not	Increased cost Delay		
	constructible and needs more easements after award.			

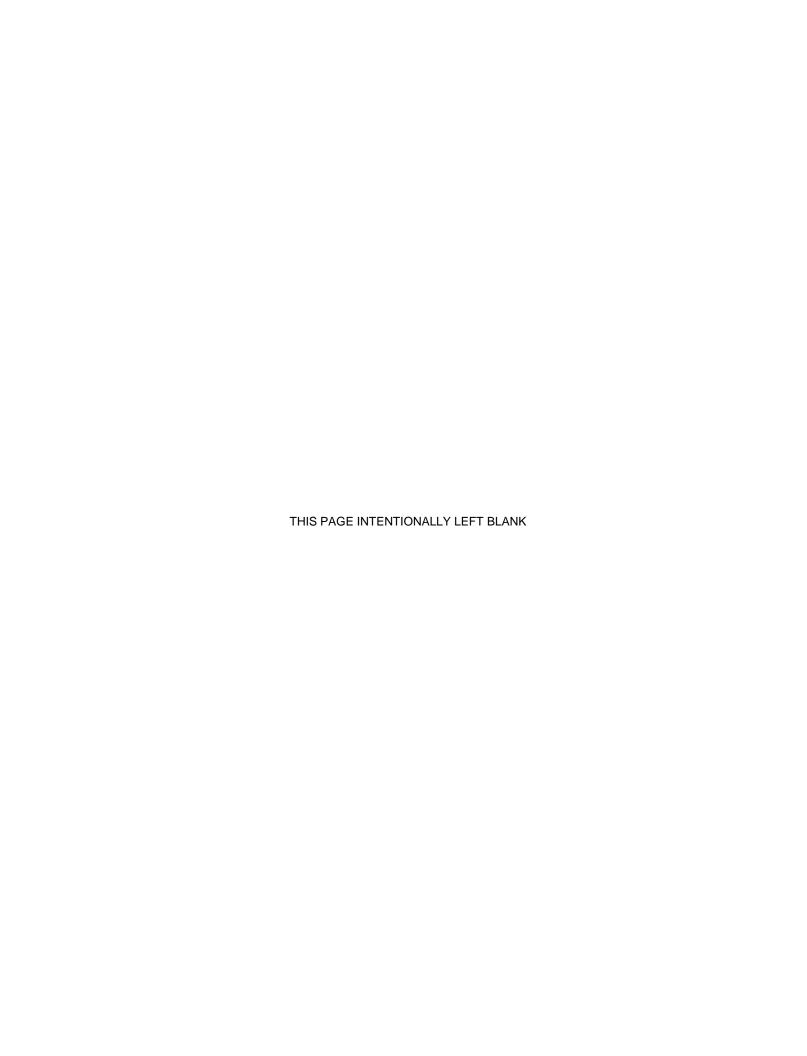

ID	RISK DESCRIPTION	EFFECT(S)		
106	Potential that DB contractor will have insufficient field resources (personnel or equipment) to maintain aggressive schedule. Multiple segments will need to be under design simultaneously. Labor pool issue. 32 qualified linemen will be needed. Potential there is not enough available. Big storm damage	Delay.		
	anywhere in US will draw from the pool to make line repairs. Possible shortages with other specialty crafts as well.			
151	Public could raise negative concerns regarding wheel/rail noise.	Increased cost to mitigate: <> grind rails <> reprofile wheels <> sound walls		
161	Unanticipated costs to provide alternate service (bus bridges, etc.) during rail service disruptions.	Cost increase.		
192	Environmental compliance during construction. - Potential impact to advancing construction within the vicinity of any cultural finds that are excavated. - Failure to meet the commitments contained within the PCEP EA, FEIR and permit conditions	Delay Cost increase		
195	Introduction of electrified train service will require training of first responders in working in and around the rail corridor. The new vehicles will be considerably quieter than the existing fleet and the presence of high voltage power lines will require new procedures for emergency response. A new training program will need to be developed and disseminated for: • Fire, police, and first responders • Local communities • Schools	Safety hazards resulting in incidents that delay construction and increase labor cost. Delays in RSD until training is completed as requirement of safety certification process.		

ID	RISK DESCRIPTION	EFFECT(S)		
237	JPB needs an agreement with each city in which catenary will be strung over an existing grade crossing (17 in all) under GO 88 (grade crossings). These agreements must be executed subsequent to installing overhead catenary. JPB is preparing a response to CPUC while working with the cities. Delays in reaching agreement could have impacts on schedule and budget.	Not completing the grade crossing diagnostics and getting agreement from the cities on the results can result in delays to necessary approvals for the project and revenue service.		
248	3rd party coordination <>Jurisdictions, Utilities, UP, Contractors <>D/B needs to provide timely information to facilitate 3rd party coordination <>Risk is for construction	Delays in approvals resulting in project schedule delays and associated costs.		
250	Potential for municipalities and other agencies to request betterments as part of the electrification project	Delay to project schedule in negotiating betterments as part of the construction within municipalities and associated increased cost to the project as no betterments were included in the project budget.		
254	Potential that bridge clearance data are inaccurate and that clearances are not sufficient for installation of catenary.	Results in additional design and construction to create sufficient clearance.		
266	Verizon poles in conflict with OCS may not be removed in advance of OCS installation.	Delay in progress of catenary installation resulting in claims and schedule delay		
274	JPB as-built drawings and existing infrastructure to be used as basis of final design and construction is not correct	Additional cleanup of as-builts after PCEP construction		
275	DB fails to verify as-built drawings and existing infrastructure	Additional cleanup of as-builts after PCEP construction		
278	Failure of D/B contractor and subcontractors and suppliers to meet Buy America requirements	Delays while acceptable materials are procured and additional costs for delays and purchase of duplicative equipment.		
282	Failure to maintain dynamic envelope and existing track clearances consistent with requirements.	Redesign entailing cost and schedule impacts.		
284	Compliance with project labor agreement could result in inefficiencies in staffing of construction.	Increase in labor costs and less efficient construction resulting in schedule delays.		
290	Delays in agreement and acceptance of initial VVSC requirements database.	Delay to design acceptance		
293	Readiness of 115kV interconnect for temporary power to support testing	Delay in testing		

ID	RISK DESCRIPTION	EFFECT(S)
311	Although project recordable injuries remain below the industry average, there have been numerous small impact incidents occurring that could potentially lead to a more serious event occurring.	The occurrence of a high impact safety event could result in project rework, construction delays, and increased project costs.

Peninsula Corridor Electrification Project Monthly Progress Repo	rt
Appendix G – MMRP Status Log	

Mitigation Monitoring and

Reporting							
	Mitigation Timing			ing	Status		
Mitigation Measure		Pre- Construction		Operation		Status Notes	
AES-2a: Minimize OCS construction activity on residential and park areas outside the Caltrain ROW.	x	x			Ongoing	The OCS proposed construction schedule has been provided to the JPB. OCS construction began the week of October 2, 2017. The D-B has utilized the potholing process to assist in locating conflicts in the 35% design and attempting to relocate OCS pole locations within the ROW.	
AES-2b: Aesthetic treatments for OCS poles, TPFs in sensitive visual locations, and Overbridge Protection Barriers.	х				Ongoing	The design requirements indicated in the measure have been implemented as described, and coordination with the specific jurisdictions regarding pole colors and design is ongoing. Coordination with the JPB & local jurisdiction regarding Overbridge Protection Barriers and TPFs is ongoing.	
AES-4a: Minimize spillover light during nighttime construction.		х			Ongoing	OCS construction began the week of October 2, 2017; and the BBI community relations lead has notified nearby residents of upcoming construction. During construction, lighting is faced inward, towards the railroad tracks, and any complaints will be documented and addressed by the BBI community relations lead.	
AES-4b: Minimize light spillover at TPFs.	Х				Upcoming	The design requirements indicated in the measure are being utilized in the design and construction process.	
AQ-2a: Implement BAAQMD basic and additional construction mitigation measures to reduce construction- related dust.	х	Х			Ongoing	The Dust Mitigation Plan was submitted to the JPB and approved. The requirements in the Dust Mitigation Plan will be implemented throughout the construction period and documented in daily reports.

	Pre- Construction Construction	Post- Construction Operation	Status	Status Notes
				record. In addition, pre-construction surveys of the potential BUOW habitat areas in Segment 4 are ongoing, as needed, and if required, they occur no more than 7 days prior to the onset of new ground-disturbing construction activities. Surveys for the 2020 breeding season will commenced in March 2020. On March 24, 2020, two burrowing owls were observed adjacent to the Caltrain ROW, near MP 44.6. The owls were located approximately 150 feet away from the Caltrain ROW. A 200-meter no-disturbance buffer continued to be implemented during the reporting period. Balfour was granted approval by the CDFW to drive vehicles and equipment through the buffer in order to access foundation installation locations to the North and South of the BUOW. During the first week of mobilization through the buffer, a Qualified Biological Monitor provided full-time biological monitoring to determine if the presence of vehicle travel had any impact on the BUOW. No impacts to the BUOW were observed, and the BUOW was consistently observed at the northern most potential BUOW burrow location during the monitoring effort. Due to the lack of observed impacts to the BUOW during the monitoring effort, the CDFW subsequently approved weekly spot-checks through the end of the breeding season, which are currently ongoing, and continued through August 31, 2020. No signs of distress from the

	Miti	gatio	n Tim	ing		
Mitigation Measure	Pre- Construction	Construction	Post- Construction	Operation	Status	Status Notes
						owl were observed due to construction activities during weekly spot checks. In addition, since there is some potential for indirect impacts during the non-breeding season (September 1 through January 31), during ongoing work on the Caltrain ROW and the completion of OCS pole foundations, the CDFW approved the reduction of the disturbance buffer from 200 meters down to 75 meters. The Qualified Biologist will monitor the burrows during construction activities within 75 meters of the burrows to look for any changes in owl foraging behavior in response to construction activities. If any change in owl nesting and foraging behavior is observed because of construction activities, activities will cease within the 75-meter buffer and the CDFW will be notified to determine next steps.
BIO-1g: Implement northern harrier, white- tailed kite, American peregrine falcon, saltmarsh common yellowthroat, purple martin, and other nesting bird avoidance measures.	X	x			Ongoing	Nesting Bird and raptor surveys were conducted from February 1 through September 15, in 2017, 2018, 2019, and 2020, prior to project-related activities with the potential to impact nesting birds. No nesting bird surveys occurred during this reporting period. Nesting bird surveys will recommence on February 1,2021 for the 2021 nesting season.

A Native American monitor has been present for all exploratory trenching and subsurface testing work.	
CUL-2e: Stop work if cultural resources are encountered during ground-disturbing activities.	x	X			Ongoing	No prehistoric or historic-period cultural materials have been observed during cultural monitoring.	
CUL-2f: Conduct archaeological monitoring of ground-disturbing activities in areas as determined by JPB and SHPO.		X			Ongoing	Cultural monitoring as-needed of project activities in culturally sensitive areas is ongoing. The Archaeological Final Report will be provided at the conclusion of construction activities.

Mitigation Measure	Pre- Construction		Post-		Status	Status Notes
CUL-3: Comply with state and county procedures for the treatment of human remains discoveries.		X			Ongoing	No human remains have been observed to date on the Project.
EMF-2: Minimize EMI effects during final design, Monitor EMI effects during testing, commission and operations, and Remediate Substantial Disruption of Sensitive Electrical Equipment.	x	x	x		Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. Designs are submitted and reviewed/commented on by JPB. Monitoring EMI effects will occur post construction.
GEO-1: Perform a site- specific geotechnical study for traction power facilities.	X				Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. Geotechnical studies and results are submitted to JPB as completed.
GEO-4a: Identification of expansive soils.	x				Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. Geotechnical studies and results are submitted to JPB as completed.

GEO-4b: Mitigation of expansive soils.	x				Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. Geotechnical studies and results are submitted to JPB as completed.
HAZ-2a: Conduct a Phase II Environmental Site Assessment prior to construction.	x				Complete	A Phase II Environmental Assessment was completed prior to construction by the JPB consultant, and the results were provided to BBI, and the required mitigation is being implemented prior to the initiation of construction activities.
HAZ-2b: Implement engineering controls and best management practices during construction.	х	x			Ongoing	Field activities are being monitored daily for significant color changes or odors which may indicate contamination. In addition, an assessment of two existing subsurface pipes by a certified Asbestos Consultant occurred during this reporting period, and a specification describing the methods for removal and disposal is currently in progress.
HYD-1: Implement construction dewatering treatment, if necessary.	х	X			Ongoing	Facilities & BMPs are in place to deal with this requirement should it arise in the OCS foundations.
HYD-4: Minimize floodplain impacts by minimizing new impervious areas for TPFs or relocating these facilities.	x				Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. The TPFs in Construction Segments 2 & 4 are currently in final design and design for TPFs in Construction Segments 1 & 3 has begun. The design minimizes

						hardscape only to required structure foundations; yard areas are to receive a pervious material.
HYD-5: Provide for electrical safety at TPFs subject to periodic or potential flooding.	х			x	Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. The TPFs in Construction Segments 2 & 4 are currently in final design and design for TPFs in Construction Segments 1 & 3 has begun. The design plan currently raises the TPFs above the floodplain.
HYD-7: Implement sea level rise vulnerability assessment and adaptation plan.				x	Ongoing	The JPB has initiated this measure and preparation of the sea level rise vulnerability assessment and adaptation plan is underway.
NOI-1a: Implement Construction Noise Control Plan.	X	х			Ongoing	The Noise and Vibration Control Plan has been submitted and is being implemented. Field activity is monitored per the Plan. If allowable noise levels are near or exceed allowable noise levels, mitigation such as blankets are used from that point forward.
NOI-1b: Conduct site- specific acoustical analysis of ancillary facilities based on the final mechanical equipment and site design and implement noise control treatments where required.	x				Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. Design is still in process and a noise study is currently being performed.

NOI-2a: Implement Construction Vibration Control Plan.	x	x			Ongoing	The Noise and Vibration Control Plan has been submitted and is being implemented. Field activity is monitored per the Plan.
PSU-8a: Provide continuous coordination with all utility providers.	X	x			Ongoing	The design requirements indicated in the measure will be implemented through the final design as described. Coordination with utility providers is ongoing and there have not been any service interruptions thus far.
PSU-8b: Adjust OCS pole foundation locations.	x				Ongoing	The design requirements indicated in the measure are being implemented through the final design as described.
PSU-8c: Schedule and notify users about potential service interruptions.	X	x			Ongoing	The design requirements indicated in the measure are being implemented through the final design as described. There have not been any service interruptions thus far.
PSU-9: Require application of relevant construction mitigation measures to utility relocation and transmission line construction by others.	X	x			Ongoing	JPB has initiated coordination with PG&E regarding transmission line construction. PG&E is currently raising overcrossing lines in Segment 2.

Mitigation Measure	Pre- Construction	Construction	Post- Construction	Operation	Status	Status Notes
TRA-1a: Implement Construction Road Traffic Control Plan.	x	x			Ongoing	The D-B has begun traffic control design and permit applications with cities in Segments 2 and 4. Designs have been completed and approved for all cross-over bridges in Segments 2 and 4.
TRA-1c: Implement signal optimization and roadway geometry improvements at impacted intersections for the 2020 Project Condition.	х	х			Upcoming	This measure has not started
TRA-2a: Implement construction railway disruption control plan.	x	x			Ongoing	Minimization of railway disruption is being coordinated by the Site Specific Work Plan. A Construction Railway Disruption Control Plan was prepared to document the measures that are being implemented.
TRA-3b: In cooperation with the City and County of San Francisco, implement surface pedestrian facility improvements to address the Proposed Project's additional pedestrian movements at and immediately adjacent to the San Francisco 4th and King Station.	х	x	х		Upcoming	This measure has not started.
TRA-4b: Continue to improve bicycle facilities at Caltrain stations and partner with bike share programs where available following guidance in				x	Ongoing	The JPB adopted the Caltrain Bicycle Parking Management Plan in November 2017, and staff have been working to implement the Plan's recommendations to improve wayside bike parking facilities along

Caltrain's Bicycle Access and Parking Plan.						the corridor. Staff have also been coordinating with local jurisdictions that have launched bikeshare pilot programs to safely site bicycles near Caltrain stations.
NOI-CUMUL-1: Implement a phased program to reduce cumulative train noise along the Caltrain corridor as necessary to address future cumulative noise increases over FTA thresholds				X	Upcoming	This measure will be implemented during project operation.
NOI-CUMUL-2: Conduct project-level vibration analysis for Blended System operations and implement vibration reduction measures as necessary and appropriate for the Caltrain corridor				X	In Progress	CHSRA is conducting this analysis as part of the EIR/EIS for the San Francisco to San Jose section.
TRA-CUMUL-1: Implement a phased program to provide traffic improvements to reduce traffic delays near at-grade crossings and Caltrain stations				x	Upcoming	This measure will be implemented during project operation.
TRA-CUMUL-2: Implement technical solution to allow electric trolley bus transit across 16th Street without OCS conflicts in cooperation with SFMTA.	x				Complete	Not applicable. SFMTA has elected to not electrify the 16 th Street crossing. This measure no longer applies.
Mitigation Measure TRA- CUMUL-3: As warranted, Caltrain and freight operators will partner to provide Plate H clearance				x	Upcoming	This measure will be implemented during project operation.
